How to Install Drivers.

Once you download your new driver, then you need to install it. To install a driver in Windows, you will need to use a built-in utility called Device Manager. It allows you to see all of the devices recognized by your system, and the drivers associated with them.

Open Device Manager.

In Windows 10 & Windows 8.1 , right-click the Start menu and select Device Manager.

In Windows 8 , swipe up from the bottom, or right-click anywhere on the desktop and choose "All Apps" -> swipe or scroll right and choose "Control Panel" (under Windows System section) -> Hardware and Sound -> Device Manager.

In Windows 7 , click Start -> Control Panel -> Hardware and Sound -> Device Manager.

In Windows Vista , click Start -> Control Panel -> System and Maintenance -> Device Manager.

In Windows XP , click Start -> Control Panel -> Performance and Maintenance -> System -> Hardware tab -> Device Manager button.

Install Drivers With Device Manager.

Locate the device and model that is having the issue and double-click on it to open the Properties dialog box.

Select the Driver tab.

Click the Update Driver button and follow the instructions.

In most cases, you will need to reboot your computer in order for the driver update to take effect.

Visit our Driver Support Page for helpful step-by-step videos.

Install Drivers Automatically.

If you are having trouble finding the right driver, stop searching and fix driver problems faster with the Automatic Driver Update Utility. Automatic updates could save you hours of time.

The Driver Update Utility automatically finds, downloads and installs the right driver for your hardware and operating system. It will Update all of your drivers in just a few clicks, and even backup your drivers before making any changes.

Once you download and run the utility, it will scan for out-of-date or missing drivers:

When the scan is complete, the driver update utility will display a results page showing which drivers are missing or out-of-date:

Next, update individual drivers or all of the necessary drivers with one click.

Benefits of Updated Drivers.

Windows 10 will not install driver for HP Officejet Pro 8600 printer.

I have an ASUS notebook computer from 2006. My printer is an HP Officejet pro 8600. My printer and my computer are both connected to a wireless network using a Cisco router. I recently installed Windows 10 and my printer worked fine for a couple of weeks. Now, it won't print. In device manager, I get a message saying "no drivers are installed for this device." In the control panel for devices and printers, the printer appears as the default printer, but I get a message saying the printer is "not connected."

When I try to print a document from an application (Word), I first get a message saying Microsoft cannot print due to a "problem with the current printer setup." And then a message saying "Word cannot print. There is no printer installed."

I have gone to HP.com to be sure I have the latest software for this printer installed in my computer and HP says I do. I have uninstalled and reinstalled the printer several times and this has not resolved the problem. I have unplugged and restarted everything several times and this has not resolved the problem. The printer works fine with two other computers using the same wireless network.

How do I get Windows 10 to install a driver for my printer, and begin working again?
