If you are looking for access to download the latest update of Windows 10 1809/1803/1709/1703/1607/1507, here below you'll find direct download links for new Windows 10 cumulative updates.

If you fail to install new updates of KB4487044/KB4487017/KB4486996/KB4487020/KB4487026/KB4487018 in your PC, relax and we have found effective methods for you to fix this issue without losing any data.

Backup system and data before downloading new Windows 10 updates.

In order to avoid data loss issue or any system error while installing Windows 10 1809(17763.316)/1803 (17134.590)/1709 (16299.967)/1703 (15063.1631)/1607 (14393.2791)/1507(10240.18132) on your PC, it's highly necessary to create a system image and data backups in advance.

Professional Windows backup recovery software - EaseUS Todo Backup is a highly recommended system backup software for you to free backup Windows 10 with simple clicks.

Support Windows 10/8.1/8/7/Vista/XP.

1. Free download and install EaseUS Todo Backup in PC. Connect an external storage device to the computer. 2. Launch EaseUS Todo Backup and click " File Backup " " Disk/partition Backup " or " System Backup ".

3. Choose data and specify the external hard drive as the backup destination, click Proceed to start backup data.

After backing up the Windows system and important personal data, you can now directly download and install Windows 10 with KB4487044/KB4487017/KB4486996/KB4487020/KB4487026/KB4487018 on your PC now. No data loss error will occur.

Fix Windows 10 17763.316/17134.590/16299.967/15063.1631/14393.2791/10240.18132 failed to install error.

If you are having Windows 10 update stuck error with latest OS builds or you failed to install Windows 10 1809/1803/1709/1703/1607/1507, just relax and you may follow below-offered methods to fix these problems with ease.

Method 1. Troubleshoot Windows 10 failed to install error.

You can follow the below steps to directly run Troubleshoot to fix Windows update KB4487044/KB4487017/KB4486996/KB4487020/KB4487026/KB4487018 fail to install error:

Type: troubleshooting in the search > Go to System and Security > Tap Fix problems with Windows Update . Tick Advanced > Enable and check Apply repairs automatically . Tap: Run as administrator (you may have to enter your passcode first) > Then click Next to finish the process.

Method 2. Reset Windows Components if Windows 10 17763.316/17134.590/16299.967/15063.1631/14393.2791/10240.18132 update failed.

1. Press Windows + X and choose Command Prompt (Admin) . 2. Stop BITS , Cryptographic , MSI Installer , and the Windows Update Services . Then type the below commands at the Command Prompt and hit Enter after you type each command: net stop wuauclt net stop cryptSvc net stop bits net stop msiserver 3. Rename the SoftwareDistribution and Cartoot2 folder. Then type the following command in the Command Prompt and press Enter after each type: net start wuauclt net start cryptSvc net start bits net start msiserver 4. Type Exit at the Command Prompt and restart PC. After this, you may retry to install Windows 10 new updates in your PC with new features.

Method 3. Fix file system error and clean install Windows 10 update with KB4487044/KB4487017/KB4486996/KB4487020/KB4487026/KB4487018.

File System error check will find and fix all system errors and Windows update problems for you.

Press Windows + X and click on Command Prompt (Admin) . Type: cd\ and hit Enter. Type: sfc /scannow and hit Enter. Wait patiently to let the check file system process complete, then Windows 10 updates fail to install issue will be repaired.

After this, you can then click the above-offered Windows 10 update links to clean install them on your PC.

## Change Log

March 2020 edits ADDED: Note and link to Revised end of service date for Windows 10, version 1709: October 13, 2020.

Microsoft .NET Framework 4.8 on Windows 10 version 1709, Windows 10 version 1803, Windows 10 version 1809 and Windows Server 2019.

This article describes an update for Microsoft .NET Framework 4.8 on Windows 10, version 1709, Windows 10, version 1803, Windows Server, version 1803, Windows 10, version 1809 and Windows Server, version 1809 and Windows Server 2019.

Please note: .NET Framework 4.8 has been refreshed with the latest servicing updates as of January 14 th , 2020. Apart from the servicing fixes, there is no change in the .NET Framework 4.8 product from the August 13 th , 2019 Windows update. If you have already downloaded and installed the update from August, you do not need to install this update otherwise please install this update to receive the latest product bits.

## About Microsoft .NET Framework 4.8.

Microsoft .NET Framework 4.8 is a highly compatible and in-place update to .NET Framework 4.7, 4.7.1 and 4.7.2. However, it can run side-by-side with .NET Framework 3.5 Service Pack 1 (SP1) and earlier versions of .NET Framework.

When you install this package, it is listed as Update for Microsoft Windows (KB 4486153) under the Installed Updates item in Control Panel.

Microsoft .NET Framework 4.8 is available on the Microsoft Update Catalog website for download and for import into Windows Software Update Services (WSUS).

## Download information.

The following files are available for download from the .NET Download Site:

For more information about .NET Framework 4.8 offline installer, see .NET Framework 4.8 offline installer for Windows.

For information about how to download Microsoft support files, see How to obtain Microsoft support files from online services.

Virus-scan claim: Microsoft scanned this file for viruses. Microsoft used the most current virus-detection software that was available on the date that the file was posted. The file is stored on security-enhanced servers that help prevent any unauthorized changes to the file.

## More information.

### Known issues.

For the known issues in .NET Framework 4.8 see .NET Framework 4.8 Known Issues.

### Command-line switches for this update.

For more information about the various command-line options that are supported by this update, see the “Command-Line options” section in .NET Framework Deployment Guide for Developers.

### Restart requirement.

You may have to restart the computer after you install this update. We recommend that you exit all applications that are using .NET Framework before you install this update.

### Supported operating systems.

Microsoft .NET Framework 4.8 (Offline Installer) supports the following operating system:

### Upgrade to Windows 10 For Free (2021 Guide)

People can still update previous Windows versions to Windows 10 for free in 2021.

It has been four years since Microsoft ended the offer to get Windows 10 for free by updating from previous versions in 2016. It was a simple process that merely required a quick click on the upgrade button from the notification. Yet, many people have still been able to update their Windows 7 and 8 operating systems to the newest one in 2021. The only thing is required — an authentic version of previous Windows versions and its activation key.

The idea why people should use Windows 10 free download is because the official support for Windows 7 has been discontinued since January

14, 2021. It means that the operating system is no longer being updated, bugs are not fixed, and users receive no technical support. In other terms, it is no longer safe to either use or store data on Windows 7 for security reasons, such as Zoom vulnerabilities. Essentially, even FBI recommends switching from Windows 7 to 10. Unfortunately, it is most likely that Windows 8 support will be ended in the near future as well.

Please note that if you were previously using Windows Home edition, your computer will be updated to Windows 10 Home version. Just like Windows Pro license is updated to Windows 10 Pro free. In case you are eager to change your OS edition, you must purchase a new license key for the edition you desire. For example, if you have Windows 8 Home, you must buy a new license before updating it to Windows 10 Pro. Otherwise, you will end up with Windows 10 Home.

Furthermore, keep in mind that these instructions do not work on Windows XP or Windows Vista as these variants were not entitled to a free Windows 10 upgrade tool in the first place. Therefore, people should not try to update these operating systems as the process will not bring any benefit.

Windows 7, Windows 8, and Windows 8.1 users will find instructions to show how to use a media creation tool to download windows 10 Microsoft. Before even starting the process, users should make sure that they have approximately 4GB of free space and only then follow each step attentively to avoid any issues and successfully update their operating systems.

Recommendation: back up your personal files first.

Before you begin upgrading to Windows 10, we recommend you to create a backup copy of your personal files first. This is an extra security step to protect your files in case anything goes wrong. Besides, many people tend to store many important files and folders on the desktop, which might get deleted during the upgrade.

For that reason, we recommend you to either backup your data using an external data storage device, or use a trustworthy backup software.

How to Upgrade to Windows 10 for Free.

This method explains how to update your OS for free using Windows 10 upgrade tool from Microsoft.

Find an official Windows license key that might be attached to your PC's motherboard or sign in to your Microsoft account and check it there; Go to Download Windows 10 Website; Navigate down until you find Create Windows 10 Media Installation section;
