How to Download iPad Apps From iTunes on Your PC or Mac.

This article explains how to download iPad apps from iTunes on your PC or Mac. This method only works on an older version of iTunes you can download and use on your Mac or 32-bit or 64-bit PC.

How to Download Apps to Your Computer.

To download apps to your computer:

Download, then launch the older version of iTunes (12.6.5) on your PC or Mac.

Sign in using the same Apple ID as you use on your iPad.

Click on iTunes Store at the top of the screen. By default, the iTunes Store usually starts in the Music category.

Change the category to the App Store by clicking on the Music category located on the right side of the screen to produce a drop-down menu.

Choose App Store in the drop-down menu.

Browse apps as you would on your iPad or iPhone. The initial page lists the featured apps, including new apps and currently popular apps. You can use the search feature at the top right of the screen to search for a particular app or change the category of apps by clicking All Categories on the menu. This allows you to choose from specific categories of apps, such as productivity apps or games.

Click on an app to get more information on it.

Click on the price to buy the app or on Get to download a free app. After you purchase the app, it automatically downloads to your PC or Mac.

How to Transfer the App to an iPad?

There are two ways to transfer the app from your computer to your mobile device.

How To Download Apps On iPhone: The Complete Guide!

You don't know how to install apps on your iPhone, but you want to learn how. There are more than two million apps in your iPhone's App Store, most of which help you get more out of your iPhone. In this article, I'll show you how to download apps on your iPhone !

The content of this article has been updated for iOS 11, the most recent version of iPhone software. Apple introduced a new App Store layout with iOS 11, so if you're running an older software version, your iPhone may look slightly different. If you haven't already, I strongly recommend updating your iPhone!

What Are Apps On My iPhone?

Apps, which is short for applications, are programs you install on your iPhone. There are apps for fun games, organizing your work or personal life, and your favorite email service or social media platform.

How To Download Apps On iPhone.

Unlock your iPhone using your passcode, Touch ID, or Face ID. Open the App Store app. Find the app you want to download by browsing the Today, Games, or Apps section, or search for the app using the Search tab. Once you've found the app you want to download, tap Get to the right of the app. Confirm the installation by entering your passcode or using Touch ID. If you have an iPhone X, double-click the side button to activate Face ID and confirm the installation. Now, the app will begin installing on your iPhone. You'll see a small status circle to the right of the app in the App Store. Once the app has finished installing, it will show up on the Home screen of your iPhone. You may have to scroll (by swiping right to left on your iPhone's display) to your second or third Home screen to find the app.

View Your App Store Purchase & Download History.

A history of every app you ever download or purchase is saved on your Apple ID. This is a great resource if your child runs up a big bill playing "pay to win" apps or if you receive fake email receipts from Apple imposters.

Follow the steps below to learn how to check your App Store purchase and download history:

Open the Settings app on your iPhone. Tap on your name at the top of the screen. Tap on iTunes & App Store . Tap on your Apple ID at the top of the screen. Tap View Apple ID . Scroll down and tap Purchase History to view a list of everything you've download on your iPhone. Even if the app was free to download, it will still show up in your Purchase History.

Apps For Everyone!

I hope this article helped you learn how to download apps on your iPhone. If you found this article useful, I encourage you to share it on social media or leave a comment down below about your favorite apps!

iPhone App Store.

iPhone App Store is an app for Android which allows you to access and view the iOS app store and check out new apps. Since iOS apps are not compatible with the Android operating system, you will not be able to download, install, or use any of the apps from the iOS store. However, this app can be useful if you are just curious about what is out there or if you are comparing Android and iOS apps for functionality. Have you ever thought, "I wonder if Apple has an app for that"? iPhone App Store for Android can help to answer that question as well as helping you to make comparisons between similar Android and iOS apps.

With iPhone App Store for Android you can explore the iOS app store in an application very similar to how it would look on a regular iPhone device. You can search for apps or filter by category to find the app you are looking for. Within each category, you can further refine your search by filtering apps by top free apps, top paid apps, top grossing apps, etc. Whatever reason you may have for wanting to see what's in the iOS app store, iPhone App Store for Android has you covered.

Snapchat Says App Will Stop Crashing If You Download the Update.

If Snapchat keeps crashing on your iPhone, you can fix it now.

The most recent version of Snapchat has been plagued by a bug that forced it to crash upon launching, but no longer! An update has been made available in the App Store to correct the issue, which was seemingly only affecting the iOS version of the app (Android users don't see to have experienced the same issue).

Ironically, the bug appears to have been imbedded in a maintenance update released on June 28 to fix a number of bugs users of the messaging platform had been experiencing.

The issue first came to light after a number of Snapchat users took to Twitter to complain about the bug, which reportedly saw the app displaying a "something went wrong — please try again later," error message while trying to load the app right before suddenly crashing. After The Verge's Mitchell Clark tweeted about the issue, Snapchat's senior vice president of product, Jacob Andreou, replied with a little sweaty-face emoji to let everyone know that the bug has since been corrected.

On Monday, Snapchat's support team let users know they were aware of the issue, advising would-be Snappers (?) in a tweet to "Hang tight, we are looking into it and working on a fix!"

Indeed, an updated recently added to the App Store does seem to solve the problem, and it's more than likely that the patch was fast-tracked after Snapchat's product team became aware of just how many people the bug was affecting. (Snapchat — which is sort of circling the drain of obsolescence anyway — really can't afford to piss off users like that at this point.)
