The Best Android Data Recovery Software 2021 for Windows 10.

“I lost files on my Android phone and someone told me to use a recovery program to retrieve all my phone data back. I am using Windows 10 and a Samsung S7 phone, what is the most effective Android Data Recovery for Windows?”

Android recovery programs are being used in retrieving lost or deleted files like contacts, text messages (a fantastic Android Data Recovery tool to recover deleted text messages on Android: <https://www.fonedog.com/android-data-recovery/5-steps-recover-deleted-text-messages-android.html>), call logs, photos, videos, documents, and much more. The demand for recovery programs is fast rising since the era of Smartphones began. This is because smartphones have bigger internal memory spaces so people can store more apps and files but just a single mistake can lead to data loss.

Data loss is the most dreaded issue for all mobile users worldwide and is still the topmost Smartphone problem until today. Good thing, there are programs that are dedicated to retrieving mobile files only. There are recovery programs available for different mobile operating systems like Android, iOS, Blackberry, and more as well as compatible with any computers like Windows and Mac.

Since Windows is the most popular and common among users, most recovery programs have their own program that will perfectly run on Windows only.

If you are using an Android phone like Samsung S7 on a Windows 10 computer and looking for which Android recovery to use, we recommend FoneDog Toolkit- Android Data Recovery . You don't need to look any further as there are tons of programs available online but only a few really works.

The competition for Android data recovery for Windows is tough but here you have the best solution that caters any sort of data recovery. Find out why FoneDog Toolkit- Android Data Recovery is the best solution for Android data recovery for Windows.

Android Data Recovery for Windows.

Part 1. What is FoneDog Toolkit- Android Data Recovery?

FoneDog Toolkit- Android Data Recovery is the most effective Android data recovery for Windows and has the highest rate in the software market today. This program has the following key features that stand out from the others:

Works perfectly with Windows 10 Compatible to Mac computers With 100% recovery rate Recovers call logs, contacts, text messages, media files, and more Allows preview of data before recovery Has selective restore option Recovers files with or without root Recovers data even from broken devices Offers free trial version Compatible to almost all kinds of Android devices out in the market.

The best part of this software is that even beginners can manage to perform recovery at any time. To start using this Android recovery , find out the steps below.

Part 2. How to Use Android Data Recovery for Windows.

FoneDog Toolkit- Android Recovery offers simple and easy steps that are click-through so that even users with no technical backgrounds can use it. This software simply runs a deep scan on the device because all the data that were deleted on the phone were not really 'deleted' but rather stays invisible until these data will be overwritten.

This is why users are greatly advised to stop using their smartphones once they discover data loss and start looking for Android recovery. To begin the recovery on Windows 10, follow the steps below:

Step 1. Download the Android Data Recovery for Windows.

On your computer, download and install FoneDog Toolkit- Android Recovery and launch the program after successful installation. You may refer to all the onscreen prompts for download and install processes.

Download Android Data Recovery for Windows -- step1.

Step 2. Connect Android Phone to The Computer.

After installing FoneDog Toolkit- Android Data Recovery, you need to connect the Android phone using a USB cable. The program will automatically detect the connection. If this is the first time you have plugged in the Android phone to the Windows 10 computer then it will ask you to download and install certain drivers to recognize your phone. Refer to the instructions onscreen on how to perform such process.

Step 3. Enable USB Debugging on The Android Phone.

The next step is to enable the USB debugging on the Android phone. USB debugging is just a way to allow the Android phone to be connected to the Windows 10 computer. This will not cause any harm to both devices. To enable the USB debugging, follow these below:

Android 4.2 and up:

Go to Settings from the Android phone Tap “About Phone” Find and tap “Build Number” 7 times or until you see the message “You are under developer mode” Go back to Settings Tap Developer Options Tap USB Debugging.

If you are using Android 4.1 and below:

Go to Settings from the home screen of the phone Find and tap Developer Options Tap USB debugging.

Click OK on the computer screen to continue to the next steps.

Step 4. Choose File Types.

On the next screen, you need to choose the files you want to recover such as photos, contacts, call logs, text messages, WhatsApp messages & attachments, videos and more. By default, all files are already checked but you can selectively choose only the ones you needed. Click “Next” to continue.

Choose File Type -- Step4.

Step 5. Scan, Preview and Recover on Windows 10.

FoneDog Toolkit- Android Data Recovery will now scan the entire device to be able to perform Android data recovery for Windows. This process may take some time but it will notify you of its progress on the screen. When the scanning stops, you can see all the recovered items from the device on the left side of the screen.

You can go to each category and then click them to preview. You can mark only the items you need and then click ‘ Recover ’ at the bottom of the screen. You can also create a new folder to save all the recovered files for easier access.

In just 5 easy steps, you have already recovered lost or deleted files from the Android phone.

Free Android Data Recovery for Windows.

Missing data from a phone would move anyone to tears. Don't panic, find it fast with Free Android Data Recovery.

Reclaiming lost or deleted mobile data.

Not a tech master? If recovering files or images from a phone isn't part of your day job, no worries. Inexperience isn't a problem with Free Android Data Recovery. Unlike some data finding tools, this one doesn't need a Master's degree in engineering to get it to work.

Did you delete something you needed? Did a virus wipe out a file? Nothing is more terrible than losing personal data. Lucky for you, Free Android Data Recovery has your back. This freebie service can help you get every bit of it back.

This program will dive deep and explore every nook and cranny in the system so you can reclaim your lost files. Whether you lost your files from improper handling, an operating system error, rooting, a virus, or your own accidental deletion, you may be able to get back your files. Yes, even if the memory was semi-overwritten by an update or a download. It doesn't matter. This program can track them down from within your phone and find them for you.

But first, switch off your WiFi so you don't have an update auto-install. Avoid turning off your phone or saving other files too. You don't want to risk complete deletion of your original file. This program for your Android phone will work the best if you install and run it soon as you realize your error.

Be prepared for the worst case scenario. Some files may disappear for good because the system did a bit of housekeeping. Stop wailing and mashing buttons. Get proactive by installing and using this software -- before you somehow delete or overwrite other important files.

Get back what's yours.

What did you lose? Messages, gallery, contacts, notes, music and video, documents, WhatsApp content etc are all potential candidates for recovery. No matter what you lost, it takes three steps to hunt down files. This handy piece of software does the hard work for you. Three taps of a button and a USB connection can reclaim your missing items.

The last thing you want is to do more damage. This mobile reclamation program will protect the data you have without harming anything. You can run the program and look for your files without worrying about making things worse.

All thumbs around tech? If you can power on your Android, you can handle this program. It doesn't take much more than that. Installing Free Android Data Recovery takes mere seconds. You won't have to stress over your missing files for long. Connect your device to your laptop or desktop computer. Then, turn on USB debugging on your Android phone. See? It's simple.

Still, every Android phone is different. The way to turn debugging on your phone may be different than your BFF's. Follow the right way to debug your phone without wasting time pecking around in your phone's settings. Of course, if this isn't your first debugging rodeo on your current phone, you can skip this step.

Is your device recognized? If not, you will need to select the manufacturer, device, and model from the drop-down list. Sit tight during your phone's analysis. Whatever you do, don't disconnect your device during the scan. You don't want to end up corrupting your files and making them unusable altogether. When the scan finishes, you can check out the salvaged contents of your phone.

See at a glance what data is still hiding on your phone with Free Android Data Recovery. It's laid out by the type of file.

The number of items and the amount of space these items take up will appear along the bottom of the screen. It's a good safeguard to make sure you aren't trying to save documents for which you lack the space. Sort through the files and find what you want. You will have to upgrade to the paid version to recover them.

Where can you run this program?

Is there a better alternative?

Android recovery apps are a dime a dozen. But not every app handles every type of file. Most recovery programs, like FonePaw Android Data Recovery, dr.fone - Recover (Android), and EaseUS MobiSaver offer data preview. You can make sure your files are available before you shell out cash to restore your files.

Free Android Data Recovery is vague about the devices it works with though it lists popular phones like Huawei, Samsung, HTC, Sony, LG, ZTE, and Motorola. FonePaw and dr.fone - Recover (Android) brag about compatibility with more than 6000 different types of Android phones. Free Android Data Recovery doesn't go into detail. Since the programs are all free in preview mode anyway, it isn't a deal-breaker. But, it's worth noting you have worthwhile options if your phone refuses to connect.

Our take.

No fuss, no hassle. A free preview option takes the guesswork out of finding your deleted files. Free Android Data Recovery is a one-stop shop for mobile data retrieval.

Should I download it?

Yes, you should download Free Android Data Recovery if you have deleted files in your phone. This straightforward app can help you get it all back before you pay for a program you may not need.

In Softonic we scan all the files hosted on our platform to assess and avoid any potential harm for your device. Our team performs checks each time a new file is uploaded and periodically reviews files to confirm or update their status. This comprehensive process allows us to set a status for any downloadable file as follows:

It's extremely likely that this software program is clean.

What does this mean?

We have scanned the file and URLs associated with this software program in more than 50 of the world's leading antivirus services; no possible threat has been detected.

This software program is potentially malicious or may contain unwanted bundled software.

Why is the software program still available?

Based on our scan system, we have determined that these flags are possibly false positives .

What is a false positive?

It means a benign program is wrongfully flagged as malicious due to an overly broad detection signature or algorithm used in an antivirus program.

It's highly probable this software program is malicious or contains unwanted bundled software.

Why is this software program no longer available in our Catalog?

Based on our scan system, we have determined that these flags are likely to be real positives.
