

**all2mp3 mac doesn't download the latest version**

The new Outlook for Mac.

This article tells you everything you can expect from the all-new Outlook for Mac.

For more information about the new Outlook for Mac functionality you can check [Get help with new Outlook for Mac](#).

Requirements.

macOS version 10.14 (Mojave) and later.

Outlook version based on update channel:

16.42 (20101102) and later for Current Channel.

16.40 (20073000) and later for Current Channel (Preview).

16.32 (19110306) and later for Beta Channel.

A Microsoft 365 Exchange Online, Outlook.com, Google, iCloud, Yahoo, or IMAP account.

Support for Yahoo and IMAP is now available in Current Channel version 16.46 (21021202).

Support for POP is now available in Beta Channel version 16.49 (21042701).

How to try the new experience.

Select Check for Updates to install the latest Outlook update.

Open Outlook, then turn on the New Outlook switch.

[What's new in Outlook for Mac - Highlights](#).

The new Outlook has many new features and improved experiences, including:

Customizable toolbar.

Choose commands to display in the Toolbar. In the Toolbar, select the more icon , then Customize Toolbar... .

Improved search.

Search is now powered by Microsoft Search and has better results and suggestions. Click in the search field or use keyboard shortcut Shift+Command+F to search.

View upcoming events in agenda or day view in the main window for mail. Select Task Pane in the View menu or use keyboard shortcut Shift+Command+] to turn Task Pane on or off.

Improved RSVP to meetings.

Respond to meeting invites with email responses to the organizer directly from the Reading Pane. Type a message in the text field in the meeting invite and select Accept , Tentative , Decline , or Propose New Time .

More Microsoft 365 Groups, including Calendars.

View all your Microsoft 365 Groups in Mail and Calendar view. In Mail, Groups are located under the Groups node for your account. In Calendar, Groups are located after calendar folders for your account.

Nested compose in the Reading Pane.

Reply to messages without opening a new compose window. Select Reply , Reply All , or Forward in the Reading Pane, Toolbar, or Message menu or use keyboard shortcuts Command+R, Shift+Command+R, or Command+J.

Ignore Conversation.

Delete all messages in a conversation, including messages already received and any new messages. Select Ignore Conversation in the Toolbar, Message menu, or message context menu, then confirm that you want to ignore the conversation.

Improved event scheduling.

Create events by selecting a time block in the calendar grid. Add event details, including attendees and locations, and view attendee availability directly in the popover before sending.

When creating a new meeting, view attendee availability directly in the event window and adjust the time of the event by moving the event within the day view.

For meetings with large numbers of attendees, use the Scheduling Assistant to view availability, add and remove attendees, and reserve resources (such as conference rooms).

Don't want to be disturbed? Snooze notifications in Outlook for Mac with the Do not disturb feature.

Outlook includes MailTips, which help you avoid common, but potentially costly or embarrassing, mistakes. MailTips alerts can be triggered by actions including clicking Reply All to a large recipient list, sending sensitive information to someone outside your organization, or sending a message to someone who is out of office.

Working elsewhere.

Give colleagues more insight into your availability by setting "Working Elsewhere" as your calendar status for events or appointments.

Meeting insights.

Outlook helps you show up prepared to your meetings by suggesting emails and files that are relevant to the event or attendees.

3-day Calendar view.

Updates to the calendar gives you extra flexibility with a 3-day view to more clearly see meetings and events if you have a full schedule.

What's new in Outlook for Mac - April 2021.

Here's a list of features that recently rolled out to the new Outlook for Mac:

Rollout State in Channel.

Impact/Comments.

MIP Encrypt Only.

Add encrypt only support for Sensitivity Labels.

MIP per workload Default label.

Parity feature with Azure Information Protection. This advance setting enables tenant admin to turn off the default label or set different default label just for Outlook. WXP can have different behavior for default label.

MIP per workload Mandatory label.

Parity feature with Azure Information Protection. This advance setting enables tenant admin to turn off Mandatory label just for Outlook. WXP can have different behavior for Mandatory label.

Added the Dictation toolbar, new voice commands, and auto-punctuation support.

The ability to create a new calendar.

The ability to rename an existing calendar.

Unseen Notifications in the Message List.

A UX affordance to let users know if they have unseen messages in their focused/other message list views.

Search Rollup hit conversation View.

We roll up the search hit in the conversation preview so that users get to the search message faster. We got an improvement of -1.53% in TTS.

This feature shows results from all folders when the user's selected scope does not yield search results.

Feedback OCPS admin policies.

Added the feedback tools admin policies in OCPS so that IT admins can control the feedback policies at tenant level for office apps.

Filter by To Me and Sort by Size.

Added Filter by To Me and Sort by Size functionality.

Full Mail Compose.

Extend the new Outlook experience to users composing email in pop-out (full mail) view.

Add-ins 1.8 API, Delegation Support and Block on Send.

Includes support for attachments, categories, delegate access, enhanced location, internet headers, and block on send features.

Updated Task Pane.

An updated, native task pane with improved tabbing support.

Add-ins that are recently installed by the user or tenant admin are automatically pinned to the toolbar to boost discoverability.

MAU Silent Update.

Microsoft Auto-update can automatically update and restore previous state of Mac Outlook in a larger array of states than before.

Pinning a message moves it to the top of your inbox so it's easy to find later.

Move and Copy mails between accounts.

Users can now move or copy mails between accounts.

Top 10 requested feature.

Sync all Contacts w/ new People View Sidebar.

Contacts in subfolders are now displayed in Phoenix via new category model also shipping in Mobile.

Features not yet available in the new Outlook for Mac.

There are several features that are available in the current version of Outlook for Mac for Microsoft 365 that aren't yet available in the new Outlook experience. Many of these features are in development and should be available in the new Outlook experience later this year.

Accounts - POP and On-Prem Exchange Support.

Export/Import of .olm and .pst files.

Known issues.

The product team knows about and is investigating the following issues in the new Outlook for Mac:

Mail, events, and contacts can't be moved or copied between accounts.

Reporting issues and providing feedback.

There are various ways to report issues and provide feedback to help improve the experience.

Contact Support.

Please report issues using Contact Support in the Help menu.

After opening a support request, a help icon will appear next to the New Outlook switch to provide easy access to the current request.

Additionally, when a support agent provides a response, a red badge will appear on the help icon.

Feature requests.

Please vote for feature requests using Suggest a Feature in the Help menu.

How to switch back.

At any time, you can switch back by turning off the New Outlook switch.

Before switching back, you'll have the opportunity to provide feedback on the experience and to create an in-app reminder for when additional features become available.

Set preferences for the new Outlook for Mac.

Administrators and other IT professionals can plan, implement, and maintain deployments of the new Outlook for Mac with a standard set of preferences described in the Office for Mac admin deployment guide.

Update history for Office for Mac.

Office for Mac that comes with a Microsoft 365 subscription is updated on a regular basis to provide new features, security updates, and non-security updates. The following information is primarily intended for IT professionals who are deploying Office for Mac to the users in their organizations.

Starting with Version 16.21, Microsoft Teams will be installed by default for new installations if you're using the Office suite install package. For more information, see Microsoft Teams installations on a Mac. For security reason, Microsoft has deprecated the use of SHA-1. Learn more Starting with the 16.17 release in September 2018, this information also applies to Office 2019 for Mac, which is a version of Office for Mac that's available as a one-time purchase from a retail store or through a volume licensing agreement. For information about the features, security updates, and non-security updates that are included in a given release of Office for Mac, see Release notes for Office for Mac. For early access to new releases, join the Office Insider program.

Most current packages for Office for Mac.

The following table lists the most current packages for the Office suite and for the individual applications. The Office suite includes all the individual applications, such as Word, PowerPoint, and Excel. All packages are 64-bit only. The build date is listed in parentheses, in a YYMMDD format, after the version number. The install package is used if you don't have the application already installed, while the update package is used to update an existing installation.

To view release notes, see Release notes.

Release history for Office for Mac.

The following table provides release history information and download links for Office for Mac. The table is ordered by release date, with the most recent release date listed first. The build date is listed in parentheses, in a YYMMDD format, after the version number. All releases after August 22, 2016 are 64-bit only. All releases prior to August 22, 2016 are 32-bit only.

All2MP3.

All2MP3 is a small software utility that helps Mac users to convert their native audio file types (or any audio file type) into MP3 format. Useful when you want to listen to those audio files on other media players and portable devices. With All2MP3, users can simply drag and drop audio files straight into the converter. The supported file types include the MPC, OGG, WMA, WAV, AIFF, FLAC, WV and more. Alternatively you can click on 'Add Files' to choose files in a specific folder.

After a file has been dropped into All2MP3 for conversion you are asked to select the quality of the files. As soon as this selection is made, the file starts to convert to MP3 format. After conversion is complete you get the option to delete the original file format or keep it.

The good thing about the player is that there is absolutely no compromise with the quality of the audio that you are converting. The conversion process is faster than many others. No plugins required.

All2MP3 for Mac.

All2MP3 is a free utility program that helps users convert audio files to MP3 format. Designed for Mac computers, the software comes with a range of features and supports the conversion of over 50 file formats. Using the application is easy and doesn't require any tech skills. Moreover, the conversion is quick and doesn't impact the quality of the audio. Since MP3 files work on almost all apps and devices, it's a must-have tool for music producers and enthusiasts.

What is All2MP3?

Converting any file to the MP3 format means universal access. This is why, most music producers, songwriters, designers, and enthusiasts, prefer this format. For example, if you record a song in WMA format, you will get high-quality sound, but it might not work on the devices of your consumers. While most WMA files work on macOS computers, some don't. On the other hand, MP3 files work on almost all programs and devices.

All2MP3, as the name suggests, converts all file formats to MP3. And converting files doesn't require any tech skills, it's simple and easy. The software can convert over 50 audio formats, including WAV, AAC, FLAC, OGG, WV, MOV, and more. Once converted, you can listen to any tune that you like on any music application or device.

Clean and simple interface.

With All2MP3 download , you get access to an interface that's easy to use. Once installed, the program opens to a simple window with drag-and-drop functionality. To get started, you have to click on the Add option to browse files that you intend to convert. Uploading the file hardly takes any time, and you can decide on the location where the converted file gets saved.

Additionally, you can also configure the program's settings to either delete the original file automatically or create a copy in another location. Before converting the app, you can use the given slider to select the output's quality . Though these options may seem limited, they're quite handy in keeping things simple and allowing you to convert files quickly and without much effort.

Convert files from all sources.

It doesn't matter where you found a file, you can use All2MP3 to convert it. You can rip files from CDs, record music from mics or streaming platforms, or download from music applications, and convert them using this convertor. The program doesn't differentiate based on format, bitrate, and size, and can even convert video files that you've recorded or downloaded.

Select output quality.

All2MP3 lets you adjust the quality of the output file quite easily. While converting the program, you can use the given slider to move the quality from 'Less' to 'Super'. You can even change the location where the converted file gets saved, every time you convert something. Keeping or deleting the original file is also up to you, and you can select a default option from the settings menu.

Moreover, the program offers various presets , so you don't have to worry about creating a balance between the size of the file and its quality. All you need to do is upload the file you wish to convert, select any one preset, and click on Convert. That said, the program does let users make manual changes and also allows them to select a bitrate ranging between 32 and 320 Kbps.

Supports numerous formats.

You can use All2MP3 to convert any file to MP3. You can either drag a file and drop it onto the dashboard or open it directly from the application. The program supports the conversion of 50+ file formats , including WMA, WAV, AIFF, MPC, WV, APE, FLAC, AAC, APE, and OGG. Since MP3 is universally accepted, converting files to this format increases its shareability and allows users to enjoy tracks on any app or device.

A drawback of using All2MP3 is that it doesn't convert the M4A format that's part of iTunes. Nevertheless, the application is quite handy for the conversion capabilities it provides for other file formats. Another issue that would impact professionals is that the program doesn't support batch conversions . You have to convert each file individually, making it time-consuming if you're looking to convert multiple files at once.

Convert videos to MP3.

Other than converting audio files to MP3 format, ALL2MP3 also supports the conversion of video files to MP3. You can even convert all HD, 4K, and FHD files to MP3. The application works as an audio ripper and extracts the audio from any video. By doing this, it makes it easier for users to get access to their favorite soundtracks from all the movies they've watched.

Get access to high-quality sounds.

One of the best things about All2MP3 for Catalina is that it doesn't compromise on sound quality . When you use the software to convert audio files, it lets you select the quality of the output file. While the default bitrate is at 128 Kbps, you can take it up to 320 if you like. Moreover, you can even lower the quality of any file to decrease its overall size.

Is All2MP3 free?

Yes, the macOS application is available for free. You can download the program without worrying about any registration or hidden fees. The program is also free from malware, making it a safe download.

Are there any alternatives?

While All2MP3 has many features, it does have a lot of competition. Therefore, if you're looking for alternatives, you should check out Music Converter , Switch , and MediaHuman Audio Converter .

Should I download All2MP3?

All2MP3 is an easy-to-use program that lets macOS users convert audio and video files to MP3 format. The program comes with many features so users can save or delete original files, decide on the output's audio quality, and change the bitrate as per their requirements. All2MP3 supports conversion of over 50 formats and is a must-have tool for music lovers and producers.
