

free cell phone antivirus download

Top 6 Free Antivirus Apps for Windows Phone.

We are continually being informed that malware is a risk to our PCs, portable workstations, cell phones, and tablets. Every day reports let us know that we have bounty to stress over. Under the umbrella of pernicious apps you'll discover a wide range of nasties shielded away, including infections, Trojans, adware, exploits, worms, observing apparatuses, and spyware.

Actually we don't like hearing this, yet the fact of the matter is that you have to reassess your picked security application like clockwork, once per year in any event. The constant flow of new malware implies security is a consistent fight. On the off chance that you examine the AV-Test reports throughout the months and years you'll perceive the amount of change there is at the highest point of the security programming diagram. Because your application is great now, doesn't mean it will keep on giving the best scope later on.

1. NetQin Mobile Antivirus 2. Aircanner Mobile AntiVirus 3.0 3. Norton Smartphone Security 4. MobiShield 5. Lookout Mobile Security For Windows Mobile 6. AVG Family Safety (Free)

1. NetQin Mobile Antivirus.

Rating : 3.5 stars on softonic.

NQ Mobile Security ensures against mobile dangers, including malware, hackers, and infections, while guaranteeing your gadgets keep running at ideal velocity. Our one of a kind components for Windows Phone incorporate hostile to infection checking, personal browsing, safe searching, and backup tools for your contacts. By taking a couple of minutes to download NQ Mobile Security, you can completely shield yourself and your family from programmers and other digital offenders.

NetQin Mobile Anti-virus is a freeware intended to ensure Windows Mobile against infection assaults, Trojans, spyware, malware.

NetQin Mobile Anti-virus gives continuous assurance and uses an infection database is always overhauled.

NetQin Mobile Anti-Virus gives a capacity as reinforcement and restores contacts and an area administration for lost or stolen telephone.

2. Aircanner Mobile AntiVirus 3.0.

With the expanded remote availability of PDAs and Smartphones comes an expanded danger from infection assaults. Save cash, time, and information by securing your significant Pocket PC now with Aircanner™ Mobile.

Aircanner Mobile AntiVirus' components include:

Aircanner's Mobile AntiVirus is an intense, far reaching security a solution for your windows mobile.

Price : free, no windows store rating, 4 stars softonic rating.

3. Norton Smartphone Security.

Since a greater amount of us accessed the Internet through our PDAs or telephones, it's nothing unexpected that the risk of infections and hacks on mobile gadgets has expanded. Also, it's nothing unexpected that antivirus programming designers are cautioning us to get ensured against mobile assaults.

Norton Smartphone Security is what might as well be called Symantec's renowned PC insurance utility. This Windows Mobile rendition gives continuous assurance from system dangers and a spam channel for SMS that gives you a chance to get rid of undesirable messages through the utilization of boycotts and whitelists.

The installation methodology for Norton Smartphone Security is a bit difficult, however once the system is running it offers an effective and bother free method for ensuring your gadget. The Antivirus module can be set to auto-protect your Smartphone, and giving you the capacity to perform complete infection scan and calendar checks at preset interims. Choices incorporate the capacity to perform programmed activities when an infection is distinguished (Log Only, Deny Access, Delete, or Quarantine), perform standard upgrades through LiveUpdate, and arrange intermediaries.

Annoyingly, the firewall component in Norton Smartphone Security, is situated in a totally isolate interface to the Antivirus area, so you need to close one to change to the next. The firewall framework is really effective however, and there are four diverse security levels you can look over (Trust No One, Paranoid, Cautious, or Trust All).

With everything taken into account, Norton Smartphone Security offers an advantageous and productive method for keeping the terrible stuff far from your mobile gadget.

It has no windows stores rating, 4 stars softonic user rating.

4. MobiShield.

MobiShield Mobile Security ensures your cell phone against malware and spyware. Get free MobiShield Antivirus.

Anti - Virus: Scan, recognize and kill malware, spyware, and Trojan, Scan Memory Support, Support Full sweep, Quick Scan Support, Support Real-time security.

Support : Windows Mobile 5.0/6.0/6.1/6.5.

No windows store rating but 3.5 softonic user rating.

Online Scams Social Media Scams Email Scams Phone & Texting Scams.

A good antivirus program is essential to a secure system, and you most definitely do not have to pay for one to get great protection. Below is our hand-picked list of the 11 best free antivirus programs that you can download for Windows today.

All of these programs perform definition updates automatically, are always running to make sure your files are protected from malware and your personal information remains private, and can start scans on-demand whenever you like.

However, each of them do have a few prominent differences that make them stand out, so pay attention to those as you decide which one to use.

If you just need a spyware cleaner and need it right now without waiting for one of these full AV programs to install, use one of the (preferably portable) applications from our Best Free Spyware Removal Tools list. There are also free on-demand virus scanners you can install. Also, consider using a Windows Firewall alternative from this Free Firewall Programs list.

If you can't even log in to Windows to install an antivirus tool, access a computer that does work and then use it to make a free bootable antivirus tool that you can then run on the infected computer.

Avira Free Security.

Password manager included.

Optional additional downloadable protection layers.

In-the-cloud antivirus process.

Additional features can be annoying.

Add-on components often require fee to be fully functional.

The main component in Avira's free software suite that makes it stand out is the optional "in-the-cloud detection" feature called Protection Cloud . This scanning method lets Avira's antivirus tool identify and stop threats before they get out of hand.

This is how it works: When a suspicious file is detected on any computer running Avira, a fingerprint of that specific file is generated and uploaded anonymously to Avira so that they can scan it and report its status (whether it's safe or dangerous) back to every Avira user so that the program can take appropriate action.

Avira can scan and remove existing threats as well as automatically detect and stop new ones. It protects you against ransomware, Trojans, spyware, and other kinds of malware. You can even choose which ones to actively watch out for, and disable others (though it's not recommended) like dialers, jokes, adware, etc.

Avira Free Security can also scan on a schedule, check files with any file extension or just the ones you manually choose from, disable the ability to stop active scans (so that viruses can not stop the program from finding them), adjust the scanner's priority level, scan primary boot sectors, follow symbolic links to scan the actual files, search for rootkits before starting a scan, scan the Windows Registry, ignore files on network drives, automatically repair, rename, quarantine, delete, or ignore threats when they're found, use heuristic scanning, add files, folders, and processes to the ignore list, manage Windows Firewall settings, password protect the program's settings, block autorun on removable devices, and make the hosts file read-only.

This program offers more than just a very extensive antivirus application. It includes several other "layers" of security that will install automatically, and they might take a while to download since there are several. However, you don't have to use them, and they won't bother you unless you open them.

These separate modules include a VPN that encrypts all your traffic (up through the first 500 MB each month); password manager to securely store complex passwords; and software updater that identifies outdated programs and gives you the download links to update them.

In addition, Avira can speed up your computer and reduce boot time with its tune-up tool, help you find the best deals as you shop online, and warn you of malicious websites or software bundles before you download them (with its SafeSearch add-on).

These extra features can be annoying if you're strictly after an antivirus solution, but again, you don't have to use them; just keep them tucked away where they are and you won't have to worry about them.

Avira Free Security is intended to run on computers with Windows 7 and newer, including Windows 10 and Windows 8. There's also Avira for macOS.

Bitdefender Antivirus Free Edition.

Drag-and-drop file and folder scan.

Minimal, uncluttered design.

Simple to set up and run.

Limited customization if you're looking for that.

Takes a while to install.

If you want an antivirus program that's not only free but easy to use and not cluttered with lots of buttons and menus, you should definitely try the free version of Bitdefender Antivirus.

You not only get instant protection against viruses, worms, rootkits, spyware, and other threats, but also anti-phishing and anti-fraud protection to carry security with you when you're browsing the internet and entering passwords.

It's remarkable how well Bitdefender runs despite its minimal design. Drag and drop folders and files directly into the program to run a scan against them, as well as start a full system scan or scan select objects from the right-click context menu—all of which can run at the same time.

Regardless of how they're started or how many scans are running simultaneously, a history of those scans are recorded for you on the primary window of the program as well as within the Events area of the settings.

The obvious downside to a program that lacks many customization options is that there isn't much you can change about it. That might be something you want but it might not be available—all you can do with this edition of Bitdefender is start and stop scans.

Another downside to this software is how long it takes to become ready for you to use. The initial installer for Bitdefender is quite small but that's just what's used to then download the full program, which is hundreds of megabytes and could take a while if you have a slow internet connection.

It's also unfortunate that you can't pause scans (it just lets you stop them) or set up file and folder exclusions before starting scans like some AV programs allow. With Bitdefender, you can only mark files or websites as safe after they've been identified as potentially malicious.

Ads asking you to purchase Bitdefender's professional programs and scheduled scans not being supported (but they're not necessarily needed since Bitdefender is always checking for new threats) are a few other not-so-greats.

Bitdefender Antivirus Free Edition runs on Windows 10, Windows 8, and Windows 7.

Adaware Antivirus Free.

Lightweight antivirus program.

Can run as a supplement to other antivirus programs.

Silent mode mutes notifications and limits resource use.

Some useful features are only usable with paid version.

Real-time email scanning not included.

Adaware Antivirus installs in minutes, is light on system resources, and can be used in one of two ways. The first is in regular mode where it checks for threats as they happen, but the other lets you use it in addition to your primary antivirus program.

What this so-called "second line of defense" does is disables real-time protection but still lets you use Adaware Antivirus to manually scan for existing threats. This feature is helpful if your primary AV software doesn't seem to find malware that you know is infecting your computer.

Whichever way you use it, Adaware Antivirus provides a defense against ransomware, spyware, viruses, and other forms of malicious software. You can find those threats through a quick, full, or custom scan.

Daily, weekly, and monthly scheduled scans are supported, and you can even run a scan to just check certain things, like only rootkits or just tracking cookies and boot sector viruses, for example.

Adaware Antivirus also lets you choose a custom performance setting to use more system resources to run the scan (to make it faster), exclude files/folders/file extensions from scans, and decide how often to check for new definition updates (every 1/3/6/12/24 hours).

For real-time protection, you can toggle on or off the following options: scan archive files, scan email databases, deep scan that checks CHM files and executable files, smart scan that skips previously checked files, scan boot sectors, scan files as they move throughout the network, and skip scanning files that exceed a custom file size (e.g., 10 MB to skip video files).

You can also protect the program's settings with a PIN as well as enable gaming/silent mode to suppress notifications.

Adware Antivirus definitely has its advantages but because there's also a non-free version you can upgrade to, many additional options are not supported.

For example, parental controls and advanced network, web, and email protection are only available in Adaware Antivirus Pro. These options are visible within the free edition, but they're not actually clickable/usable until you enter a Pro license key.

Adaware Antivirus Free works with Windows 10, Windows 8, and Windows 7.

Avast Free Antivirus.

Add-ons allow you to increase protection.

Password manager and some other tools included are trial only.

Additional features require purchase.

Avast is used by hundreds of millions of people and ranks high in nearly every "best list" of antivirus programs, and for good reason. If you want a solid program that is sure to block new threats but is still easy enough to customize, you should consider using it.

Avast Free Antivirus is similar to Avira; supplemental modules enhance the virus shield and provide additional services related to security and privacy.

The antivirus portion has lots of options you can change but it's still easy enough for anyone to use since there are information blurbs next to most

items so you're not left wondering what will happen if you enable them.

Plus, both definition and program updates are performed automatically (a manual option is available, too), meaning you can install Avast and let it do its thing without worrying whether you're running the latest and greatest version.

Avast is customizable and lets you make changes to everything from whether to make a sound when threats are detected and how long notifications should remain on the screen, to the kinds of file extensions that should be scanned.

Here are some more features supported in this program: scheduled scans, custom scans that can check only the memory, rootkits, auto-start programs, etc., checking all files or just certain file extensions, protecting against ransomware, identifying files by their content instead of their suffix, fine-tuned heuristics sensitivity, scanning for potentially unwanted programs, follows shortcuts to scan the real file, scan archives like self-extracting DOS and Win32 executables and 7Z and RAR, Windows Explorer context menu integration, exclusions for folders, HDDs, and URLs (but not specific files), custom scans that are easy to save for use in the future, a Rescue Disk utility lets you use the Avast scanner even if you can't start your computer, particular areas of the program can be protected with a password, and Do Not Disturb Mode.

Before Avast is installed, you have the option to include over a dozen different tools: file, behavior, web, and mail shields; software updater, browser cleaner, rescue disk, Wi-Fi inspector, security and SafePrice browser extensions; password manager; junk file cleaner; and Game Mode.

Technically, if you only want the antimalware protection, you can install just the shields from the start of that list; the others are add-ons that aren't necessary but could be helpful at some point.

For example, the software updater is a nice tool that will not only check for and report outdated software but also install the newer versions for you (even in bulk).

Wi-Fi Inspector scans the network for devices that could be vulnerable to attacks. For instance, it might identify that a computer is running a file sharing service that has been known to facilitate the spread of a certain kind of worm.

You can install these tools (it takes less than five minutes) and then disable or completely remove them later. Or, you can ignore them during setup and just install them later, or not at all.

However, the password manager and Cleanup tools are only trial versions that will expire after a time-limited trial. There's also a firewall, file shredder, and sandbox feature that's unusable in this free version.

Avast Free Antivirus is compatible with Windows 10, 8, and 7. There's also a Mac and Android version.

See our comparison between Avast and Bitdefender to see which one might be better for you.

Best iPhone antivirus apps in 2021: top iOS security protection.

Although it's less likely that your Apple iPhone or iPad will get infected by malware compared to a PC, it doesn't mean they are completely immune, so this list of the best antivirus for iPhone can give you the extra protection you need.

Whether it's malicious websites, annoying ads, web trackers or just someone grabbing your device when you're not looking, there's plenty to be concerned about if you own an iPhone, which is where the the best iPhone antivirus apps come in handy.

However, many big-name antivirus and security vendors have products that are specially tailored to devices that run Apple's iOS operating system, which is the mobile OS that iPhones and iPads run on.

Installing the right choice of the best iPhone antivirus apps can protect you from both web-based threats and local snoopers, with powerful extras available from cloud backup to high-end identity theft protection.

Not all these apps deliver on their promises, but we've found five of the best iPhone antivirus app contenders that definitely deserve your attention.

We've also featured the best antivirus for Mac and the best Android antivirus.

1. Avast Security & Privacy.

The best iPhone antivirus app.

Reasons to buy.

If you're looking for the best iPhone antivirus app then you probably can't get better than Avast Security & Privacy. Avast remains on the leading providers of security and anti-malware solutions on desktop, and its mobile apps come with a similar degree of power and trust.

As well as the expected antivirus protection in real-time as well as through scanning, the app also blocks malicious websites to prevent intrusions. There's also a feature for scanning the Wi-Fi network to ensure it's secure and will send notifications if it's not. Another one helps ensure you're using the optimum privacy and setting settings on your iPhone.

As well as the able free tier there's also a premium one which opens up additional options, such as a photo vault for protecting your images and an online identity checker to ensure your email and passwords aren't being shared online.

Other tools include a VPN which allows for encrypted connections online, even on an unsecured network, helping to further protect your privacy. There's a 14-day free trial available for the premium version, after which you can choose to pay monthly or subscribe yearly.

2. Avira Mobile Security.

Stay safe online with the German antivirus giant.

Reasons to buy.

German-based Avira is one of the most effective antivirus engines on the desktop, and although Avira Mobile Security doesn't have the same malware-hunting focus, it's still crammed with useful features.

Phishing protection does a good job of blocking malicious websites, an excellent first step in keeping you safe online.

An Identity Safeguard automatically scans the email addresses of you and your contacts to check whether they've been leaked online, and alerts you to any security breach.

An unusually versatile Contacts Backup feature can protect your address book by emailing the details to yourself, or backing them up directly to Google Drive or Dropbox.

Elsewhere, handy management tools enable analyzing memory and storage use, as well as providing monitoring reports on recent security events, plus the suite is rounded off with a simple anti-theft module.

Put it all together and Avira Mobile Security is a versatile suite which uses multiple layers to protect you from web-based and other dangers. While the basic version is free, you can upgrade to the Mobile Security Pro version and/or add identity protection with web protection.

3. Lookout Mobile Security.

iOS security with comprehensive identity theft protection.

Reasons to buy.

Lookout Mobile Security is an unusually complete security app which shields your iDevice with four layers of in-depth protection.

Powerful security tools check for common security vulnerabilities (missing updates, a jailbroken device), monitor running apps for suspect activity, and raise an alert if you connect to a dangerous Wi-Fi network.

An effective set of anti-theft technologies include various device location tools, an alarm that works even if your device is on silent, and the ability to display a custom message on the lock screen to help you get the device back.

Simple backup options are on hand to keep your contacts and photos safe from harm.

There's a lot of functionality here, for sure, but if you want more, the Premium Plus version adds a full-strength identity theft protection service. This includes alerts if any of your personal information is exposed in a data breach, along with social media monitoring, lost wallet recovery to help you quickly cancel and reorder credit cards, 24/7 support if the worst happens and \$1m identity theft insurance to cover any damages or legal fees.

4. McAfee Mobile Security.

Original? No. Comprehensive and entirely free? You bet.

Reasons to buy.

McAfee Mobile Security won't exactly surprise you with its functionality. Anti-theft, contacts backup, secure local storage for your media files: it's all very familiar. But don't let that put you off – the app is more interesting than you might think.

The Media Vault hides your photos and videos, for instance. That's not unusual, but you can also snap photos or videos directly from the app, and have them automatically encrypted and stored in the vault. And you can quickly reopen the vault with Touch ID or even Face ID on the iPhone X.

The anti-theft features take a similarly thorough approach. Yes, there are the standard options to track your device on a map, or activate a remote alarm which sounds even in silent mode. But the bundled CaptureCam feature can email you with a snapshot of anyone trying to get into your vault. You're able to initiate an alarm from your Apple Watch for easier location. The app can even save your device location when the battery is low, giving you a better chance of tracking it down.

Bonus features include automatic contacts backup, remote wiping of contacts if your device is stolen, and a battery indicator which allows checking your iPhone battery level on your Apple Watch.

McAfee Mobile Security may not have the most imaginative of feature sets, then, but there's a lot here, especially for a free app from a big-name vendor. If you don't have some of these functions already, it's well worth a closer look.

One Security - Antivirus, Cleaner, Booster.

Protect against viruses, fake apps, frauds, & other types of malware with One Security! Keep your personal data safe with Junk file scan, App permissions advisor, and Virus cleaner!

Protect your privacy by receiving alerts when spyware or adware-infected apps are downloaded onto your device.
