A reliable antivirus.

Zoner AntiVirus for PC is a product focused on Zero-day vulnerability. Its task is to complement the antivirus contained in the operating system (OS Windows) and focus on the currently spreading vulnerabilities that attack Internet users. It detects these up-to-date threats before they get into conventional antiviruses as samples.

Smart phone protection.

Protect your smartphones with Zoner AntiVirus Free and Zoner Mobile Security. They provide antivirus protection, alert you to unsolicited application permissions on your phone, and many other features. Join millions of satisfied users.

Zoner AntiVirus application for Windows:

Zoner AntiVirus application for Windows.

The application is free and designed for Windows 10.

Zoner AntiVirus for Windows focuses on detecting Zero-day vulnerabilities currently spreading across the Internet. It ideally complements system protection with security programs directly in Windows..

On-access and on-demand scan.

ZAV for Windows scans files downloaded from the Internet when they are downloaded or used (on-access scan) and the scan can be run manually (on-demand scan)

Zero-day vulnerability protection.

With our antivirus, you are protected against new threats currently spreading through the Internet.

Zoner AntiVirus Free for Android.

The application is free and can be upgraded to a professional version Zoner Mobile Security, which also contains advert detection + backup and renewal via SMS or a call*. *The backup can be used up to version 4.4; this and higher Android versions do not support the feature.

Protection against Zero-day vulnerability.

With our antivirus, you are protected against new threats currently spreading through the Internet.

Protection of installed applications.

Checks applications, monitors their permissions, and protects you from unsolicited advertising* * Advert Detection is a function in the paid version.

On-access and on-demand scan.

ZAV for Android scans applications when they are used and can also be run manually.

Secure messages.

With ZAV application for Android, you can send messages to another user encrypted with your key. The communication will be safe.

How does it work?

Using Zoner Antivirus is easy and can be handled by any smartphone or PC owner.

The ZAV technology.

Zoner AntiVirus is a modern antivirus system developed for the OS Windows, Linux and Android. The ZAV core is robustly designed, high-performance, and can handle both large-scale mail servers of big corporations and home and business desktop computers.

Signature-based detection Dynamic code emulation Dynamic and static heuristic analysis Run-time heuristic analysis Targeted and generic decryptors Decompressors of archive formats 64-bit emulator Regular updates.

Zoner AntiVirus is used by over 160 000 households!

The application supports Windows 10. It does not support previous versions of Windows.

The program is in English, Czech, German and Russian.

Frequently Asked Questions and Answers in Zoner AntiVirus Home Products and how they work. If you do not find an answer here, feel free to use the contact form.

What is the minimum hardware configuration on which ZAV is able to run?

Zoner AntiVirus is capable of running on any x86 processor with MMX support. However, for emulation of programs using a newer instruction set, SSEx instruction support is also required.

Is ZAV functionality somehow time limited?

Explicitní časové omezení není žádné, je pouze třeba brát v úvahu, že se jedná o BETA verzi, která může být kdykoliv nahrazena verzí ostrou a s ní i aktualizace.

There is no explicit time constraint, it is only necessary to understand that this is a BETA version, which can be replaced at any time with the final version and with same for updates.

What operating system does ZONER AntiVirus support?

ZONER AntiVirus for desktop is compatible with Windows 10. We are developing ZONER AntiVirus for the Windows version which is supported by manufacturer. Older versions of the system are not supported by the manufacturer due to technical support being terminated.

The server version of ZONER AntiVirus works on Linux OS, but is not free to download.

Why doesn't the program support Windows 7 and older?

Program podporuje aktuální operační systém Windows 10. Dřívějším verzím Windows (Windows XP, Windows 7, Windows 8.1) skončila ze strany výrobce technická podpora a my podporu pro tyto systémy negarantujeme. Náš program na nich možná poběží, ale mohou se objevit chyby.

The program supports the current of Windows operating system – Windows 10. Earlier versions of Windows (Windows XP, Windows 7, Windows 8.1) have discontinued technical support from the manufacturer and we do not guarantee support for these systems. Our program may run on them, but errors may occur.

Do I need a license key for the program? Where do I get it?

ZONER AntiVirus no longer uses license keys; you need to create a ZONER account to fully use the program. You will then log into the program with this ZONER account.

Can be ZAV used simultaneously with other antivirus systems?

Yes, of course. Collision with other antiviruses on Windows system is not known.

eScan AntiVirus.

(Home Edition) eScan Anti-Virus is certainly one of the nicer-looking and more user-friendly Antivirus applications we've tested. But beyond the eye candy, there's some pretty hefty technology under the bonnet which gives eScan a certain edge when it comes to protecting your Windows PC with style and speed.

This AV solution provides users with Real-time protection for every file on your system or seen by your system over a network (ie. a network drive). It features malware protection and also features a nifty gaming mode which disables notifications when you're busy gaming while still protecting your system.

One great feature of eScan is the laptop mode which reduces strain on the battery. Along with the gaming mode, we have to say that this is a pretty well-thought out Anti-Virus program!

Apart from protection against viruses and malware, it also sports some very good anti-spam algorithms and a very good firewall. Technical support is available `round-the-clock, 365 days a year.

eScan is highly efficient, using up the least amount of resources possible.

Best Apps Payment Services.

Spyware is a form of malware that tries to steal information from you without you knowing or approving. It could be disguised as legitimate software or work behind the scenes to do things like track web browsing data or monitor keystrokes to collect passwords.

You might have a spyware infection if your computer's performance has recently started to suffer, and especially if strange pop-ups are showing up, websites are redirecting to places you don't want to go, email contacts are getting odd spam messages that appear to be from you, or you're a victim of identity theft.

Below are several free anti-spyware tools that can scan your hard drive, flash drive, external hard drive, etc. to remove spyware. Some of them only work when you manually start the scan, but others will monitor your computer all the time to make sure spyware can't modify your computer or monitor your information.

All the programs mentioned below are known to scan for spyware but they might not scan for other things like viruses. Other scanners remove some kinds of malware but not spyware, so we've omitted those from this list.

Spyware is often bundled with a normal program's installer. See [How to Safely Download & Install Software](#) for some tips on avoiding spyware in the first place.

SUPERAntiSpyware.

Lots of scan options.

Scans can run quickly by using more processor power.

You can scan anywhere you want, including the system memory.

Works from Explorer to scan any folder/file at any time.

Doesn't update automatically.

Can't schedule scans to run automatically.

SUPERAntiSpyware should be your very first pick if you want to get rid of spyware that's already on your computer. It updates often, installs and scans quickly, and gives you complete control over what gets scanned.

It's able to check inside ZIP files, skip unknown file types (for a quicker scan), ignore files bigger than 4 MB, and skip over non-executable files

(so that only EXEs and similar file types are scanned).

What really makes SUPERAntiSpyware stand out among the others in this list is that it can also be set up to only scan files that have been changed within the last so-many days (1 day, 5 days, etc.), ignore System Restore and Volume Information data, use more of the CPU for a faster scan (called Scan Boost), and even scan the files that shortcuts point to.

SUPERAntiSpyware can scan the whole computer or just parts of it where spyware normally exists. You can also run a Critical Point Scan to delete spyware that's currently running in memory or use the Custom Scan option to pick what gets scanned and where to check (flash drives, internal/external hard drives, select folders, etc.).

This anti-spyware tool can also delete temporary Windows files before the scan is started, exclude folders from scans, scan from the right-click context menu, and close down any open web browsers before scanning.

The freeware version is 100 percent free but you do have to manually run scans and definition updates (they don't happen automatically). However, these limitations are lifted with the professional version.

SUPERAntiSpyware works with Windows XP and newer versions of Windows.

If you want to try the professional edition, you can enable the trial during installation of the free version.
