### 3 Practical Ways to Fix Google Drive Upload Slow for Large Media Files.

Google Drive is a useful online storage service, it features in ease-of-use and provides 15 gigabytes space for free, those make it worldwide-welcomed, but many Google Drive users are faced with Google Drive upload slow issue from time to time. In this article, I'll show you 3 practical ways to solve that problem for different conditions. The situation in which each method is suitable has been summarized at the end of the article, I hope you can find a solution that suits your case.

Google Drive is familiar to everyone, as one of the best online drives, Google Drive is renowned for its powerful functions and ease of use, it offers users 15 gigabytes of free storage and practical file retrieval function.

Online storage is brand new a way of storing digital files and it's so useful indeed. I believe that the merits of online drive have been spread to the most and lead to the fact that people are inclined to save important files online instead of local. The features of online drives - simple, safe and easy-sharing fit our using habits and working pattern nowadays perfectly. But there is one and only drawback of online storage: online storage can never match wired transmission in data transmission speed.

- Google Drive is no exception, plenty of Google Drive users are faced with Google Drive upload speed slow issue from time to time. However hard you tried, nothing seemed to work, Google Drive doesn't seem to make good use of your hardware and bandwidth at all. One might wonder: "How to add a video to Google Drive faster?" Sometimes, 5mb/s upload speed leads to several hours PC bandwidth occupation for only a video uploading. Not to mention that you want to sync your PC data to Google Drive.

It's foolish just thinking about it, of course, you don't have all day for that. Now I'll introduce three ways to fix Google Drive upload slow, each way is simple, useful, practical and easy to master, and the corresponding tools are all clean and safe.

Google Drive MKV Video Not Working? Here Is the Troubleshooting Guide!

Quite a few guys have experiences on streaming MKV files in Google Drive but end up in failure. Why did that possibly happen? Does Google Drive support MKV playback? I understand you may feel a little bit lost. Just take a moment, I have made a plain explanation and compiled 3 solutions to common problems, which will save you from pressing needs. You will find the satisfactory answers below.

Can Google Drive Play MKV Video File? It Depends!

Problem One - Couldn't Preview File - There Was a Problem Playing This Video.

- Solution 1: Make a Copy of MKV File.
- Solution 2: Open in New Window.
- Solution 3: MKV Google Drive Playback in Incognito/Private Window.

Problem Two - We're Processing This Video. Check Back Later or Download the Video Now.

- Case 1: This Video is Currently Unavailable.
- Case 2: Unable to Process This Video.

Can Google Drive Play MKV Video File? It Depends!

Google Drive is undoubtedly a solid cloud storage platform that enjoys great popularity among a very large user base. One of the highlight feature is the ability to directly preview and play the uploaded video files via the native YouTube-like video player so that people can simply access Google Drive for video streaming on different devices. However, many folks have reported a few similar problems of MKV Google drive won't play, so what is going on?

Indeed, MKV does not appear in the list of Google Drive supported video formats, but oddly enough, I have to say that every MKV file I've ever uploaded seems to work fine. After some investigation, I have summed up two representative problems about Google Drive MKV playback below, the corresponding solutions are provided as well. Before we get started, make sure you're in a good internet connection and have updated your browser.

Problem One - Couldn't Preview File - There Was a Problem Playing This Video.

This is the most frequent error message when you preview an MKV file in Google Drive. Generally, you can simply address this issue with 3 methods below.

Solution 1: Make a Copy of MKV File.

Right click on the MKV file that Google Drive won't play, select "Make a copy" option in the context menu. Google Drive will create a copy of your original MKV file. Then double-click on the video copy to play the video. This trick has been verified by quite a few people, you may give it a whirl.

Solution 2: Open in New Window.

When you see the error message on a pop-up window, click on the "3 points" icon in the top-right corner and select "Open in new window" option. Then the video will play in a new browser tab.

Solution 3: MKV Google Drive Playback in Incognito/Private Window.

Sometime, the Google Drive not playing MKV issue is caused by browser cache, cookie or certain extension/plugin. For you guys who are using Chrome or FireFox browser, playing MKV videos on an incognito/private window may solve this problem. For Chrome user, click on the "3 points" icon in the top-right corner and select "New incognito window" option, alternatively, press a keyboard shortcut Ctrl + Shift + N ; while for FireFox user, select "New Private Window" or press Ctrl + Shift + P .

Problem Two - We're Processing This Video. Check Back Later or Download the Video Now.

If you run into this error message for Google Drive MKV playback, generally, it will lead to 2 different results so that you have to solve the issue respectively.

Case 1: This Video is Currently Unavailable.

Just as the error message implies, the MKV file is not ready to be played. If the file is large, it may take a while to transcode the video. "Transcode", yes, you read that right. Although you are allowed to upload MKV video in any resolution, the maximum playback resolution in Google Drive is limited to 1920x1080.

It is similar to what YouTube automatically does: Your original MKV file is untouched, but Google Drive will transcode and create several preview versions of this video - 360p, 720p and full 1080p. When the processing is complete, the video will be streamable normally.

Case 2: Unable to Process This Video.

Generally speaking, the processing time ranges from several minutes to hours based on normal file size and video parameter. If it always shows "We're processing this video." message for days, the MKV video is likely to be corrupted or uploaded in a format that won't be recognized by Google Drive. In this case, you have to download the MKV file and see if it works with your local media player, such as VLC, MPC-HC, KMPlayer, etc.

If the MKV file is a stubborn file type but works in your media player, it's recommended to convert the video to Google Drive supported formats and upload it again to fix Google Drive MKV not playing issue, many video converter freeware can do this job like a shot, such as Free HD Video Converter Factory, HandBrake, VLC, etc. In my experience, MP4 (H.264 video / AAC audio) is the best setting that Google Drive usually processes really fast. Instead, if the MKV video is corrupted or damages, try to repair the video to make a last stand.

It is quite normal to run into occasional hiccups, nothing is perfect, Google Drive is no exception. After you walk through the whole workflow, you may get "Google Drive videos not playing" issue resolved. Also, if you've come across some problems that are not mentioned above, don't hesitate to let me know the details.

WonderPlugin.
