This article has been viewed 5,065,328 times.

This wikiHow teaches you how to save a picture from Instagram onto your phone or computer. While there is no way to save photos from within the Instagram app or website, there are third-party sites and apps that you can use to retrieve and download photos on desktop, iPhone, and Android platforms.

If you aren't logged into Instagram, you'll need to enter your username and password to log in before continuing.

To go to a person's profile, click the "Search" text bar at the top of the Instagram page, type in the person's username, and click their profile in the drop-down menu.

If you went to someone's profile, first click the picture that you want to download.

On some browsers, you will have to select a download folder and click Save or OK to download the photo.

Tap the search bar. Type in batchsave Tap BatchSave for Instagram Tap INSTALL Tap ACCEPT when prompted.

If you don't see this text box, first tap the Users tab in the upper-left corner.

Tap Search Tap the search bar. Type grabit - tag and view into the search bar. Tap Search Tap GET to the right of the "GrabIt" app. Enter your Apple ID or Touch ID when prompted.

You may first have to tap OK two times to allow InstaGet to access your photos.

About This Article.

To save a picture from Instagram on your Android phone, start by going to the Google Play Store and downloading Batchsave. Once the app has installed, open it and tap "Skip" to get past the tutorial. Then, enter your Instagram username and password and tap "Login with Instagram." After you've logged in, tap the "Search for users" text box at the top of the screen. Now, type in the username for the friend you want to download pictures from. When you've opened their profile, select a photo you want to keep, and tap the "Download" arrow below the bottom-right corner of the photo. You can find your downloaded image in your phone's photo gallery. For more tips, including how to save a picture from Instagram on iPhone, read on!

Instagram Photo Downloader.

Instagram Photo Downloader is a brilliant tool that you need to always have bookmarked in your favorite browser. Why don't you have such a tool though? Don't bother with Google. I want to show you the best one that I've found on the web – Bigbangram Instagram Photo Downloader .

Downloading. May take up to 30 sec, please be patient.

Firstly, let me clarify why I need this tool almost every day and why I love to download Instagram

This little robot is my irreplaceable helper when I need to save any content that I've found in my Instagram feed to my device memory. In seconds. In the best quality possible. Without any installations. In one click. Great for using this content in future.

How can I download content from Instagram?

Everyone knows that there are several methods to download Instagram photos. Most of them require using the page code to download to Instagram. But saving images using the HTML code is a long and sometimes difficult process! Not everyone can just jump into it and find the line that has the link to their original image.

This Instagram Photo Downloader service does everything for you automatically: you just copy the link to any Instagram photo you want to save on your computer, mobile phone, smartphone, PC, desktop, laptop, or any device you own. You paste this link to the photo into the box in the Bigbangram service.

Then you just need to click the "Download" button and that's it – you have the image in your device memory now. That's why I love this IG download tool so much. Because it is more than just a bot – it is an up-to-date and modern full service to download from Instagram fast.

It doesn't require any knowledge. And it makes downloading Instagram photos very simple, not stressful at all, and takes just two seconds.

So I strongly advise you to bookmark this Instagram download page and have it in your browser, no matter whether it's Chrome or Safari – it will

do IG downloads on both.

Why do people need to save IG photos?

So what are the reasons to have this tool to download a Instagram in your hand? Here I'll share some points to keep in mind when you need to download an Instagram post. There are 5 main reasons or options for downloading from Instagram:

Save what you love with IG Downloader.

The first reason to download Instagram app content is always popular and needed by everyone – from a professional marketer to simple Instagram user. This is about Insta downloads of photos you really like and want to keep on your device memory forever. This is content that you don't want to just save inside the Instagram app, but you want to download as a wallpaper for your smartphone, for example, or use this picture that you like as an avatar for your social media, or for any other reason.

Download Instagram photos for future reuse.

The second one sounds more professional, but normal Instagram users can also keep this in mind for future. This reason for downloading is inspiration. When you see some photos that look great, and these photos are somehow connected to the topic of your account, you might want to have them as inspiration for your future posts or publications. You can use these photos as a reference, for example for your photo sessions, video sessions, or for your designers, animators, etc. Download Instagram photos and share them with your team in a private chat. Or even add to your website with credits to the authors.

Download Instagram for curating content.

This is one of the must-have tools for you if you're a content curator. If you're creating an Instagram page with various photos from different bloggers' posts which all are connected with one topic, for instance Parisian lifestyle, use Instagram to download amazing things to inspire your audience. You want to use the original quality content for your page (and you always put credits for authors), but you don't want to disturb them and ask them to send you the photo directly. So you use Instagram Downloader for this and save the content all by yourself with one click.

Download to keep Instagram photos from events.

The fourth and really popular reason to bookmark Instagram Downloader is to save content from one event or location. It's kind of a difficult task to save all the content that's been published about one event, meeting, celebration, or even one weekend. If you have lots of friends and you want to grab all their posts and create an album of all the photos from one event, you can do it with Instagram Downloader and download Instagram. All the photos appear quickly in your device folder without directly messaging your friends or colleagues!

Saving user-generated content.

Downloading Instagram photo reviews is more for owners of brands or business pages, or anybody who sells on Instagram. UGC can bring you lots of clients and lots of attention. So, when you want to have the original reviews of your happy clients you can just go to the post with the review, copy the link, paste it to the Instagram Downloader line and click download to use these photos in the future. You know this kind of content works great! And yes, a review that is downloaded in original quality is much better than a screenshot, believe me.

PHOTO DOWNLOADER FOR INSTAGRAM.

Use Photo Downloader for Instagram to save Instagram photos and videos from your Instagram account or any public one.

No. A user can't tell if you download his media with the Ingramer downloader.

Is it lawful to download Instagram pictures?

Yes, it is legal to download Instagram pictures. If you do not publish the saved photos as your own (not giving credit to the real author), you keep within the copyright law.

Here's how to download Instagram photos.

If your Instagram feed is as chock-full of amazing photography as mine is, then you've probably found yourself wondering how to download Instagram photos at some point. That's what we'll show you today: how to save Instagram photos from your stream and how to back up your own Instagram photos.

How to save photos on Instagram

The Instagram app doesn't automatically allow you to save photos (or even to zoom in, for that matter). We've already shown you how to zoom in on Instagram photos with just the Android system, but saving Instagram photos will require an app.

1. Download and install InstaSave via the button below.
2. Open the app and sign in with your Instagram login details. Your stream will be reproduced as selectable icons, just like in your Gallery app.
3. Find the image you want to save (you can search for users with the Search magnifying glass icon).
4. Tap the Save button at the top right of the screen – which looks like a floppy disk.
5. You'll see the save location of the folder, which you can then explore through your Gallery app.

How to save your own photos on Instagram

If, at one point, you turned off Instagram's auto-save feature in a flurry of storage-saving madness, you might want to turn that option back on. If you've never poked around in the Instagram settings then you're probably safe and the app is auto-saving your uploaded photos to your device. But if you're not sure, it doesn't hurt to double check.

1. Open Instagram and go to your profile page at the far right.
2. Tap the overflow menu in the top right hand corner (the three dots).
3. Go down until you see the option for "Save original photos" and make sure the switch is flipped to the "On" position.
4. You can do the same for your videos too if you like. They'll be saved in a folder in your Gallery app.

Make sure your own Instagram photos are automatically saved to your device. / © ANDROIDPIT.

How to download your Instagram photos on PC.

Say you've lost your phone and signed into Instagram on a new device. Maybe you'd like to download a copy of all of your Instagram photos to keep on your new phone? Or create an archive on your computer? That's easy to do as well, but you'll need to do it on a computer rather than via

your phone.

1. Go to the Instaport site on your computer.
2. Login with your Instagram credentials.
3. Choose whether you want to download all photos or just selected ones.
4. Save the images to your computer.
5. If you want them on your phone now, connect your phone to your computer with a USB cable and copy the files to your phone.
6. Save them in the Instagram folder in your Gallery/Photos (or wherever you would like to keep them).

Do you save your Instagram photos? Did you know you could download other peoples' photos?

4 ways to save Instagram photos to Android.

Among other social medial networks, Instagram is now one of the most popular social media networks in the world. It has been ranked as the number one platform to view photos of places and people in different parts of the world.

Viewing Instagram photos in photo-stream is really exciting but, it is not always easy to save the same photo on your device so as to view whenever you want to remember the event, place or the person you are viewing his or her photo.

Nevertheless, even as you will not be allowed to save photos directly on instagram, there are still several means through which one can get any photo from instagram page to mobile device or even computer. This article is dedicated to offer you information on how to save instagram photos to android with ease.

Reasons Why People Want To Save Instagram Photos to Their Android Device Way 1 - Save Instagram photos to Android using Facebook Messenger Way 2 - Use Instagrabbbr.Com to Save Instagram Photos to Android Way 3 - Install Instagram Photo Saving App Way 4 - Save Instagram Photos to Android from instagram.com Further Reading: Transfer Downloaded Instagram Photos from any Device to any Device.

Saving the photos to Android will now give you chance to retain any photo you want or events worth of remembering. In fact, this is among the reasons why most Android users desire to save their instagram photos to Android from time to time. If you are among those desiring to do same, you will get professional guide on how to save instagram photos to Android through the content of this article.

There are several ways to save instagram photos to Android but this article will only focus on the 4 most easy ways .

Read on to find how.

Way 1 - Save Instagram photos to Android using Facebook Messenger.

Step 1: Open Instagram on your Android Phone.

With your finger, tap Instagram app on your Android Smartphone to launch the application. Search around for the photo you want to save on the instagram.

Step 2: Select the Instagram Photo You Want.

There are three vertical dots located at the top right hand corner or instagram page. Click on the dots and there will be pop-up menu.

Step 3: Select Copy Share URL.

This action will copy the photo to your clipboard for you to paste when you want.

Step 4: Go to Facebook Messenger App and click to open.

Step 5: On Facebook messenger app interface, search for "Repost Bot". This is equivalent to searching for a friend on Facebook page.

Step 6: Paste the copied instagram share URL and click "Send" button. You should paste by tapping the screen and holding for some time.

Step 7: Tap "Download" button located at the bottom right hand side of the screen. This action will save the photo into your device or even computer as the case may be via Facebook.com

Way 2 - Use Instagrabbbr.Com to Save Instagram Photos to Android.

It is nice for you to know that you can easily save instagram photos to Android with the help of instagrambbr.com. The steps you need to take for this is quite simple which made it one of the best ways to backup or save photos to Android without passing through any form of stress. This is one of the top websites that will show up when you type in “download user instagram photo” on Google search engine. The steps you need to follow in order to save instagram photos to Android using Instagrambbr.com are:

Step 1: Search for the Instagrambbr.com from Google.

In Google search engine, type in “Download user instagram photo” and you will see the sites that will enable you to save instagram photos on Android with instagrambbr.com being one of them

Step 2: Select the Instagrambbr.Com and Begin to Search For the Photo You Want.

Through this site you can easily save instagram photos you want into your Android mobile device without few mouse clicks. Search for the photo you want and save by following the short photo saving process. This method is short and simple but highly effective. You can also download photo saving app to save instagram photos with ease.

Way 3 - Install Instagram Photo Saving App.

Another effective method to save instagram photos to Android is to use instagram photo saving app. There are lots of them on the internet you can use to effectively save photos to Android and one of them is EasyDownloader which can help you to save photos to Android by following easy steps. The steps you need to follow are:

Step1: Install Instagram App on Your Device.

Step 2: Download Easydownloader app.

Step 3: Open Easy Downloader and enable “download mode” from the settings.

Step 4: From the App select the right icon located at top right of the screen to open instagram

Step 5: On the instagram app, there are three-dots located at under the photo you want to. Click it and you will see options. Just select “Copy Share URL”.

Way 4 - Save Instagram Photos to Android from instagram.com

While saving instagram photos to android is possible through third party apps, it is nice for you to know that there will be less stress and difficulty if you are to save the photos to Android through Instagram.com. You can actually save your favorite instagram photos to android in more secured and effective way when you introduce Wondershare TunesGo into the activity. The steps you need to follow to have this done are:

Step 1: Log in to instagram through www.instagram.com on your PC.

One interesting thing is that instagram.com will allow you to easily access your photos on any computer which will make it easy for you to save any photo you want.

Step 2: Find the photos you want to save into your PC.

Instagram.com normally allows users to only view photos of people within their current friends and it will not allow you to explore other photos. But, for you to view any instagram user feeds, you have to type in <https://instagram.com/> and the person’s user name.

Step 3: Move to the photo you want to save on your PC and click at the eclipse (...) located at the low right corner of the screen.

Step 4. Save image to your computer.

You can save the image to your computer by right clicking on the image and select “Save Image As” Save dialogue box will come up for you to select where to save the image with your preferred name.
