10 Best and Latest Android Download Manager Applications.

If you download a video file or document that is up to gigabytes in size, then you have to download it with the help of the Android downloader application. This application will help you download large files on the internet quickly.

Read more:

Usually, if you download a file that reaches a gigabyte in size without the support of a downloader application, the download process may be interrupted. Why? because the file you downloaded has reached the maximum limit and is too large. Therefore you should use an Android downloader app .

Recommended Fastest Android Downloader Application.

Of course, we will feel very annoyed if the file we are downloading becomes an error or is interrupted in the middle of the download process. This often happens when we download large files on Android.

Therefore, for those of you who have a hobby of downloading large files such as downloading movies, you must have a downloader application on your Android. Here are 10 kinds of Android downloader applications that you must try and install on your Android phone.

1. Advanced Download Manager.

The first Android downloader application is called Advanced Download Manager. This app is one of the best Android downloader apps and you can download files faster.

This application has also implemented the spatial connection method. This method is a method of dividing the network by means of multi-threads up to 9 connections. Well, with this method, you can make large files download smoothly on your Android.

By using Advanced Download Manager, you can also check what the internet speed is in real-time. Then the results of your downloads will be organized more neatly and will be categorized by date, time and others. You can also use the pause or resume features to download large files.

2. Turbo Download Manager.

Turbo Download Manager is an application that allows you to download multiple files at once, such as downloading images, videos, audio, zip, and document files in the web browser of your Android phone.

How to use this application is also very simple, namely by sharing a URL link to the application, and then the application will increase your download speed by activating the multi-network method.

In the multi-network method, you can pause, resume or queue up many downloaded files at any time. If the file has been successfully downloaded, it will automatically be inserted into your SD card.

3. Louder Droid Download Manager.

Louder Droid application is an application designed specifically for use on the Android platform. This application supports all types of files to download such as music files, videos, images, documents, and so on.

Louder Droid has a very friendly and familiar interface design in the eyes of users. This is enough to make users feel satisfied and can operate it very easily. This application can also use dark or light mode.

4. Fast Download Manager.

You can use the Fast Download manager application as an alternative application to the advanced download manager application. Why? Because this application has features and tools that are almost the same as the ADM application. This application can perform the download process using 10 connections and can use the pause or resume features.

The appearance of this application is also very good and has been integrated with the browser created in this application. Well, on that browser you can block annoying ads from all sites on the internet. That way, you can surf the internet freely and quickly.

5. Browser code with Download Manager.

Unlike the previous application, this Browser Code application is an internet browser in which it already has a download manager that can speed up the process of downloading a file. You can download videos, pictures, music, documents, and so on using this application.

You can also lock private tabs and download tabs with a password or Touch ID. In this browser, there is also a USA-owned VPN that you can use unlimitedly. And to use it you can do it with a single touch on the protection icon. This application also supports various types of files such as mpp4, avi, mov, docx, xls, and so on.

6. Download Accelerator Plus.

This application has almost the same features as other applications, so you can use it as an alternative to the previous download manager application. Examples of features such as being able to see internet speed in real-time, pause, or resume.

The Download Accelerator Plus application is also able to increase the speed of downloading your files on Android. To save files to Android, you can do it manually by saving them to your SD Card. Another excellent feature is that this application can auto-catch on download links in all browsers.

7. IDM – Download Manager Plus.

You must think that this application is an application released by the company that created the desktop version of the Internet Download Manager (IDM) application, right? But unfortunately, that assumption is wrong. Because this application is not an official application issued by the company.

But don't be discouraged just yet. Because this application is no less interesting than the desktop version of the IDM application. This application also offers download speeds of up to 500%. Not only that, this IDM application can support the download process in the P2P (peer to peer) method via Torrent.

8. Phoenix Browser with Download Manager.

Similar to the Kode Browser application, the Phoenix browser application is also an internet browser application that includes a download manager. There are many various features available in this application, such as data saver, private browsing, and downloading files.

Phoenix browser can detect videos that you can download automatically with the smart detection function when you are browsing the internet. This browser will speed up your download process because it already has a download manager feature in it.

9. GeThemAll.

If you are bored with browsing various webs to download files one by one, then this application will give you a solution. You don't have to download various files one by one. Because by using this application, you can download all the files at once.

This application also features faster download management and good file management. You just need to find the file that you want to download.

10. MyJDownloader.

MyJDownloader has more than 300 plugins that you can use however you want if you want to download. A useful plugin to schedule the exact time the download process can be started or stopped is the scheduler plugin.

With this application, you can monitor the download process that is running, see the order of links that have been saved, or can add links in link grabber.

Top 5 Best Download Manager for Android Mobile & Tablet.

Downloading on pc is fast, easy and convenient, thanks to several third-party softwares and browser extensions available. But when we try to download large files on our android devices be it smartphone or tablet, we may encounter several issues, like not being able to resume downloads in case of internet failure or the downloading speed is slow compared to downloading on pc or the downloads not starting or retrying automatically after possible failure. Several such hiccups come when we download from our mobile device or tablet. Several browser apps like Mozilla Firefox, Google Chrome, Dolphin or stock browser, etc are there but none of them provide full-fledged download manager. My friend who downloads a lot on his mobile didn't even know that download managers for android existed which could provide users with same level of ease that they get on pc while downloading. In this article, we'll discuss the best android download manager with tons of features and options to manage downloading on our android phone or tablet, and the best thing about these apps are that they are all available for free:

Table of Contents.

1. Advanced Download Manager:

Out of all the downloader apps that I tested, I preferred ADM as it is the best in my opinion and experience, but I do ask you to try others as well and choose the one you like the most as most of these are relatively close in usage mechanism and features set. It tries to auto-capture downloadable files and links from supported browsers or just long-tap on the downloadable link in your default browser and choose open with app or share link and then select this app to initiate downloading via ADM. The same method applies for any other download manager app listed here in this article.

It runs the downloads in background. You can also easily quit its background running service from application interface. It supports queuing, auto-retry, pause and resume. It supports breaking the download into several parts (you can set how many parts) and initiating parallel/simultaneous downloads of all those parts using multiple connection to speed up downloads. (This particular mechanism is applied in various download manager programs on pc which makes the downloading faster) It also has the option to enable cataloging. If this option is turned on, all your downloaded files are neatly arranged based on the file format into categories like programs, archives, video, music, images, others. It also allows you to specify schedule for downloading. This is pretty neat and useful feature and you can set whether the download should use mobile internet or WiFi. For example, you can specify your home hours and WiFi downloading to use your home internet connection for downloads. It also has auto-start on boot option so that it could automatically initiate pending downloads. It also has the option to auto-stop its service after defined periods of inactivity so as to keep your android device free of its resources and to save battery. Furthermore you can specify downloads to pause automatically if the battery level is low. Two Theme mode(Dark and Light) and option for customizing colors of the various elements of interface. Inbuilt browser to capture downloads if you're unable to do so from your default browser, as well as the ability to specify user-agent. It also indicates downloading speed and other details in notification panel so that you could easily peek at the progress without launching the program or switching to it.

2. Loader Droid:

As I told you earlier, most of these download manager apps come with similar set of features. So, basically it comes down to what suits you the best, what appeals to you the most. UI experience varies a bit. It also has almost similar download capturing mechanism as in ADM.

It has the option for setting default connection profile for all your downloads as well as individual ones i.e. you can specify whether to use WiFi only or WiFi + Mobile data. It also supports pause/resume, multiple connection/parts parallel downloading, queuing. You can specify the number of retries attempts to be made before declaring failed message. It also has download scheduler to start downloads at specified time using specified connection type (WiFi or Mobile net) Every time it captures downloads or it receives a link to download, it will present a dialog box to specify file storage location and other details. It doesn't automatically add and process downloads, because Auto-add feature is restricted to pro version of this app, not free version unlike ADM. It also supports cataloging for organizing downloads into specific categories based on the file type. Dark and Light theme.

3. Turbo download manager.

The interface is quite simple. This app also comes with similar number of features as the two above:

You can specify number of connections per download. Whether to queue or start download immediately. You can also specify buffer size and connection timeout values. There is also Defensive connection option in preferences which is aimed to reduce errors on such servers which do not support multiple connections.

4. Download Manager For Android.

Not many download managers are available on android. By default this app opens in browser mode. Its privacy policy looks kind of deterring and so is aggressive advertising. This app doesn't offer more options in preferences apart from the basic multi-part, downloads folder, etc. options.

5. Easy Downloader pro.

When you launch this app for the first time, it presents a nice and easy to understand startup wizard which shows you how to add downloads to this app and prompts you whether you want to limit downloading just to WiFi or to any network. There isn't much option in settings. It comes with browser mode and it uses Dolphin, firefox, etc as the browser if one of these apps are already installed on your device..

3 Best Free Download Manager For Android.

Nowadays, download managers have become the standard for downloading files. After all, most browsers struggle at downloading large files or multiples files at once. With the help of download managers, you can organize and manage your downloading, pause/resume it, schedule it and do much more.

Best Free Download Manager for Android.

While there are so many options available today, it can be quite troublesome to find the perfect one. So, in this article, I have made a list of the 3 Best Free Download Manager for Android. You can use any of these, depending upon your choice, and get amazing speeds and efficiency in downloading. So, let's check out each one of them.

1. Free Download Manager.

Free Download Manager (FDM) is the best download manager you can find on the play store with the most positive reviews. This app is being used by millions of satisfied users, including myself. The best thing about FDM is that it is completely free and has no ads at all. It is an integrated browser that can help you download files directly with the app.

There's a snail mode that can really slow down the download, without pausing it. This decreases the chances of encountering an error while downloading. The interface is really clean and easy to navigate. It has torrent download support as well. Overall, it's a really good app for all the users who want an easy yet effective download manager.

2. Advanced Download Manager.

Advanced Download Manager (ADM) is one of the most popular download managers you can find. A completely feature-packed, clean interface, browser support, and almost all the features you would be looking for in a download manager. You can limit download speed, schedule it, change download links, and just do a lot more with its amazing features.

You can also download mp3 files from popular music archives. The downloading speed seemed to be faster than FDM when I tested. The problem here is that it shows you ads on the bottom of the screen, which can be annoying sometimes. But the ads only occupy a small part of the screen. Overall, I loved the app and would recommend you give it a try.

3. 1DM.

1DM (formerly IDM) is an amazing tool to manage your downloads on your android device. 1DM is a freemium app. Many of its features have limitations that you can extend with the paid version. The best thing about 1DM is that it can support up to 16 threads to speed up the downloads. It has ads on the free version on the bottom part of the screen, which can be a deal-breaker for a few people.

It has a built-in browser, music, and video players, file manager, and much more. You can pause and resume your downloads any number of times without any worry. You can use this to download torrents as well, and it supports up to five simultaneous downloads. It's tried, party tracker block feature is really helpful in keeping your data safe. Overall, a really good download manager but a few limitations.

Which Download Manager is best for Android?

Free Download Manager (FDM) is the best one you can find for Android.

Is IDM available for Android?

Yes. IDM has been changed to 1DM and you can get the app directly from the Google Play Store.

What is the use of download manager in Android?

There are so many features to manage the downloads including, faster download speeds, setting bandwidth, scheduling, limiting downloading speed, pausing and resuming downloads, and just so much more. You get to control all of the things while downloading a file.
