

dxtory download for pc

How to Use Dxtory to Record Games.

In the realm of game capturing programs, Dxtory is one of the most powerful applications. It features an incredible number of configuration options and is one of the few programs that easily supports recordings of up to 120FPS.

However, it can also be a very confusing piece of software. Once you are used to it, you can see how everything falls into place and it becomes much simpler to use. But for novice users, the interface and its many options can be very intimidating.

Here, we will take a look at how you can use Dxtory to record your games in a simple and user-friendly manner.

The All-in-One Screen Recorder & Video Editor.

Record desktop screen, voiceover, and webcam simultaneously Edit recorded clips quickly with a wide range of professional tools Built-in plentiful templates and effects Export to MP4, MOV, MKV, GIF and multiple formats.

Record games with Dxtory.

Note: Dxtory's free version is limited to recordings of 30 seconds. If you want to record unlimited sessions, then you will need to purchase a license.

Setting things up.

As you have probably understood already, the magic of Dxtory lies in its configuration options. Finding out where everything is and in what order you have to configure them can certainly be confusing, so follow the steps below.

Run your game.

This is the first thing you will want to do. Dxtory will automatically recognize games running in the background so you should launch the game you are planning to record immediately.

To view running games in Dxtory, you have to go to the Target tab, located on the far-left of the toolbar.

Choose a save location.

Now, you will want to select a location to save your recordings. This will save you the hassle of later trying to figure out where they are.

To do this, just go to the Folder tab, click on the Plus icon, and select a location in your computer.

Run the benchmark.

While still in the folder tab, click on the benchmark button, located next to the location where your videos are saved.

This will let you see how fast your hard drive can run. You will surely need a good SSD for fast recordings so keep that in mind.

Set up the hotkeys.

Go to the Hotkeys tab There are 8 different options here, but you only really need to set up the first one, which is the key you will use to start and end the recording.

Just click on that space and then press the desired key.

Change the video settings.

In the next tab, the Movie settings, you will be able to configure exactly what your video output will be like. You can change video codecs, frame rate, quality, and the file format (just choose AVI).

Don't be intimidated by the number of options here, just change what you are comfortable with.

Set up your audio.

The Audio tab will give you the option of setting up two different channels, usually one for music/gameplay audio and your microphone.

Make sure to select the right devices here, though this should be relatively easy unless you have a bunch of different audio devices connected to your PC.

A note on the advanced settings.

The Advanced tab is exactly that, meant for advanced users. Do not mess with anything here unless you actually know what each option is.

Recording your gameplay.

Now that you have (hopefully) set up everything, you are ready to start recording. To start with, you can minimize Dxtory and just head over to the game you want to capture.

You will notice an FPS counter, but this will not be included in the recording, unless you choose to do that in the Movie Settings tab.

To start recording, you just press the hotkey you set up before. When you start recording, you will see 2 FPS counters: the one on the left is the FPS your game is running at, and the FPS on the right is what you are recording in.

To finish the recording, just press on the hotkey again.

Recommended Alternative – DemoCreator.

Dxtory can be a powerful application but it's far from perfect:

Not user-friendly Can only record games, not desktop. No video editing options.

If you are looking for an alternative that can cover all of those areas without having to learn a complex interface again, DemoCreator is perfect for you:

Bandicam — это лучшая программа для записи экрана, игр и видеоустройств.

Bandicam — это компактная программа записи экрана для Windows, которая может записывать все, что происходит на экране ПК, в формате высококачественного видео. Также можно выполнять запись определенной части экрана или игр, использующих графические технологии DirectX/OpenGL/Vulkan.

Bandicam поможет вам сделать запись игры с высоким коэффициентом сжатия, сохраняя при этом близкое к оригиналу качество и обеспечивая более высокую производительность по сравнению с другими программами записи с подобными функциями.

Захват видео с экрана.

Bandicam может записывать все, что происходит на мониторе компьютера, и сохранять это в формате видео (AVI, MP4) или изображения.

Запись игр.

Bandicam позволяет записывать различные двухмерные и трехмерные игры в видеоформате 4K UHD и выполнять захват видео до 480 кадров.

Запись с устройств.

Bandicam позволяет выполнять запись с внешних видеоустройств, таких как веб-камера, Xbox/PlayStation, смартфон, IPTV и т. д.

Faceless Internet Connection.

Faceless Internet Connection is a multiplatform application to surf the Internet safely without showing the IP of the computer. The most important advantage of Faceless Internet Connection is that it facilitates web browsing without showing the IP of the computer.

Dxtory.

Dxtory is a movie capture tool that has been specifically designed for DirectX/OpenGL applications. It captures DirectX and OpenGL video data directly from your system's surface memory for rapid recording* with no loss of quality.

Lightweight. Tabbed interface. Custom screenshot capture tools.

From the tabbed interface of Dxtory you will find everything you should need to capture the media you want. From the main window you can access Global, Advanced, Screenshot, Hotkey, Video and Audio settings. Not only does Dxtory provide a standard set of tools, there are also some neat features tucked away too. For example, the Overlay settings not only offer status options but also color-coded frame and status indicators. The screen capture facility also has the ability to customize screenshots with margin, scaling, and clipping options. You can even save clips in multiple formats, enable High Speed and Auto Repeat options, and specify JPEG quality.

Dxtory is quite a diverse capture tool; it is capable of recording audio from multiple sources, and it has support for third-party video codecs and broadcast output. This will prove to be useful to those of you who specialize in gaming and those who need more than the standard freeware applications that are currently available.

*The trial version of Dxtory has some limitations, including a watermark on output.

Dxtory download for pc.

Fraps is a universal Windows application that can be used with games using DirectX or OpenGL graphic technology. In its current form Fraps performs many tasks and can best be described as:

Benchmarking Software - Show how many Frames Per Second (FPS) you are getting in a corner of your screen. Perform custom benchmarks and measure the frame rate between any two points. Save the statistics out to disk and use them for your own reviews and applications.

Screen Capture Software - Take a screenshot with the press of a key! There's no need to paste into a paint program every time you want a new shot. Your screen captures are automatically named and timestamped.

Realtime Video Capture Software - Have you ever wanted to record video while playing your favourite game? Come join the Machinima revolution! Throw away the VCR, forget about using a DV cam, game recording has never been this easy! Fraps can capture audio and video up to 7680x4800 with custom frame rates from 1 to 120 frames per second!

All movies are recorded in outstanding quality. If you have Windows Media Player please sample some of the movies captured with Fraps below:

Want to try Fraps out on your own machine? Head on over to the free [Download page](#).

Like the software and want to purchase the unrestricted full version? Your support is appreciated! Register Fraps.
