The last couple of days have brought some good news for iOS device owners who happen to love consuming visual media in their spare time. Yesterday we told you that Apple TV units in the United States went under a silent update to bring the Hulu Plus service to users, allowing specific content from network partners to be streamed through the unit to a connected HDTV. Amazon is never a company who want to be left behind or excluded and have released their Instant Video app for the iPad for immediate download.

There is no denying that the iPad, especially the third-generation Retina display tablet, is a phenomenal device to watch movies and television shows on. The device is small enough to be a mobile gadget but with a display large enough to provide an extremely immersive experience for visual media. The Instant Video app allows new and existing members to take advantage of their Amazon Prime accounts to browse, choose from and watch literally thousands of different titles directly on the iPad. In their official literature, Amazon is claiming that the service offers more than 120,000 videos, which should be more than enough to keep even the pickiest of users happy.

The service isn't exactly ground-breaking, and if you are familiar with any other renting and streaming service like Hulu Plus, Netflix or LoveFilm around Europe, then getting up and running with the Amazon Instant Video app and service will be a relatively straight forward process. As well as the tried and tested methods of delivering this digital content, Amazon is also offering a pretty useful offline viewing feature within the app that allows those using it to download any purchased or rented titles to their device for viewing when a Wi-Fi connection isn't available. The usefulness of this feature really can't be underestimated.

The chances are; if you intend to use the Amazon Prime service through this iPad app then you will own an additional device or gadget that is capable of accessing the service. The integration of Whispersync technology means that when videos are being watched or paused, the position is automatically pushed to all other devices that are logged in with the same account. This is particularly beneficial for those who might own a PlayStation 3, Amazon Kindle or a Mac that is also used for media playback through Amazon Prime.

The release of this app from Amazon is certainly going to appease a lot of users who have been waiting for a polished way to access the service on the go. Instant Video doesn't really differ to much in design from other apps of the same nature, but the absence of an iPhone and iPod touch compatible version is definitely notable. Here's hoping that Amazon will push out some evolutionary updates that offer additional device compatibility as well as fixing the reported video issue when streaming to an Apple TV device.

How to download purchased Amazon Instant Video to Mac?

Can I buy a TV show from Amazon Instant Video and download it to my Mac? The FAQ file is very confusing. It makes it seem like if you want to watch from a computer, you must stream it. The only time it mentions downloading is for the Kindle Fire, a device that I do not have, and I don't have a need for it either.

All I want to do is buy the show from Amazon, and download the video files. From there, I can just open the video files and watch them. Is that supported? Also, are these files protected in some way? I have a video converter, and I would really like to convert them to MP4 so I can watch them on my iPod Touch.

Basically, Amazon explains pretty much anything you may want to understand. According to the help files on Amazon.com, this service (Downloading Amazon Instant Video) is only provided to Windows users. They make you download a special player to download the videos, and that player doesn't work on a Mac. So to speak, you cannot download Amazon Instant Video to Mac directly. Besides, Amazon bought files are DRM protected. However, you can still get Amazon purchased movies, TV shows onto a Mac for enjoying. Below is the step-by-step guide that walks you through the process on how to download & transfer files from Amazon Instant Video to a Mac. Keep reading.

Step 1 Install Amazon Converter for a Mac.

Remember this has to be done on a Windows computer due to Amazon's limitations. A program is needed in order to convert Amazon Instant

Video into Mac accepted files. Here we highly recommend DRM Media Converter which could do both Amazon DRM removing and video converting. Or you may do this by clicking on "Add" button on the program and follow up on-screen instructions. Below is the image on how the interface will look like with files imported:

Step 3 Select Mac Compatible Format.

If you are thinking about downloading and converting Amazon Instant Videos to Mac, iPod, iPhone, iPad, iTunes or QuickTime, you may want to choose MP4 format which works perfectly on Apple software/hardware. Here you may press on "Video files to" button, move to "Common Video" and there you can choose "MP4" as the output format. Besides, you can use this Amazon Converter for Mac computer to convert any other DRM-ed files into any format you need.

Step 4 Convert Amazon Instant Videos to Mac.

Here you may simply hit on "Start" button and this smart software will now get started the Amazon videos to Mac supported files conversion task.

Then you may need to wait for a while till the process is finished. Once done, by clicking on "Find Target" button you will reach the converted Amazon outputs which are now in Mac compatible MP4 format. Now you can freely download and transfer these Amazon Instant Videos to Mac or any Apple devices for playback. Have fun.

Q1: I lost my registration code or I didn't receive it after purchase, what should I do? A: If you lost your registration code or you did not receive the code after purchase, you can get it via our online registration code retrieval system by submitting your licensed e-mail address or order number. Please note that only the orders processed by SWREG and RegNow can be found in our system. Q2: What shall I do, if the registration code is invalid? A: There are several reasons why the code is invalid. Please check the following situations. a. Wrong spelling of your licensed e-mail address or registration code. The e-mail address and registration code are case sensitive. Please copy them from your registration e-mail and paste them into the proper text boxes in the registration window. b. The registration code doesn't match the version. Please note that we upgrade our products very frequently, and sometimes you need a new registration code to register the upgraded version, even the upgrade is free. If your former registration code does not work with the free upgrade, you can get a new one on our Support Center.

We suggest you download the upgrade version from the link with which we provide the registration code. If the upgrade is not free, you have to place a new order for it. And you will receive a new registration e-mail. To view the version of the software installed on your computer, select About on the Help menu, and you can see the version number in the pop-up window. Q3: What if I want to use the program on another computer but I bought a single license? A: If you want to use the program on a new computer, please uninstall it from the old computer first, and then install it on the new computer. If you lost the registration information, please retrieve it on our Support Center or contact us with your order number or e-mail address which you used to place the order. We will re-send the registration information to you. And then you can use the program on the new computer.

General Information:

Q1: Do you provide technical support for trial users? A: Yes, if a trial user meets any technical problem when using our product, please submit your question via our online form, and we will assign an account to you to sign in our Member Zone. Our support team will answer your question there and send the solution to your e-mail address at the same time. In order to receive our support properly, we suggest you track the problem in our Member Zone. Q2: What is the difference between the trial version and the registered version? A: The trial version is an important part of our business mode. This kind of version can help customers have a clear idea of the program before they place an order to buy it. We provide trial versions with different restrictions on different products. Most trial versions have the full functions as the registered ones, except that there may be a watermark on the output videos or you are limited to use the software for a certain period or for certain times. After you register the software, the restrictions or limitations will be removed. Q3: How to update my program to the latest version? A: There are some ways to upgrade your program. a. Our program can check for updates regularly. If there is an update, an update dialog box will appear when you start the program, and then you can click Update or the download link to download the latest version. You need to remove the former version and install the latest. If you cannot register the new version with your former registration code, you may need a new one. You can get it on our Support Center with your licensed e-mail address or order number. If the program does not check for updates automatically, you can click Check for Updates or Update on the Help menu.

b. We will notify you of the major upgrade via newsletter. If the upgrade is free, you can download it from the link on the newsletter and get a new registration code on our Support Center.

Technical Support:

Q1: How to transfer files to my iPhone/iPod/iPad with iTunes? A: You have to save the converted files on your computer at first, and then transfer the files to your iPhone/iPod/iPad via iTunes. Here below are some tips on how to use iTunes: 1. Connect your iPhone/iPod/iPad to the computer and launch iTunes. (If you have not one, please download it from the apple official website <http://www.apple.com/downloads/>) 2. Click My iPhone/iPod/iPad under the devices, and select the Manually Manage Music and Videos option in the summary window. 3. Click File menu and select Add File to Library option to locate your mp3 or mp4 files, then the added files will be automatically classified in the music or films category under LIBRARY. 4. Click music or film under LIBRARY, drag the music and film to My iPhone/iPod/iPad. And then click music or film under My iPhone/iPod/iPad, you will see the file in the right list. Q2: How to speed up conversion? A: There are quite a few factors influencing the duration of conversion: 1. The length and size of the original file 2. Settings for outputs 3. Computer configuration, etc.

And there are some tips that may be helpful for speeding up conversion: 1. Hide the preview when converting. 2. Do not make other operations on the computer when converting. When converting, there is large amount of data processed, consuming intensive resource like CPU and system memory. So it would be much better not to other programs so that the resource won't be distributed. 3. Make the source file and output file on local hard disk. If the video you want to convert is on your camera or other device, and you want to put the output video onto your portable media player, please copy the source file to your computer first, and set the output directory on your computer, too, not directly on your media device. After conversion, you can copy the output video to the device. 4. The higher parameter the source video has, resolution, frame rate, etc. the longer it takes to convert it. Q3: How to load DVD folder, ISO files and IFO files, and what is the difference between Load DVD Folder and Load IFO Files? A: There are two methods available to load DVD folder, ISO files and IFO files: 1. Click the arrow on the right of the Load DVD button and select Load DVD Folder, Load ISO Files or Load IFO Files to load the files into the program from your hard drive or disc; 2. Click the File menu and select the corresponding command to load files into the program from your hard drive or disc. When you select Load DVD Folder, it will open the whole DVD folder, usually we select the VIDEO_TS folder. All files in this folder including trailers or commercials will be loaded into the program. If you select Load IFO Files, you can choose one IFO file to load. We suggest you choose the biggest IFO file, which contains the

main movie, to convert and you can save much time without converting unnecessary parts.

Tip: To better locate the biggest IFO file, you can open the VIDEO_TS folder on the DVD, and drag the IFO file with biggest size into the program. Q4: How to crop the video? A: Select the video and click the Edit button. In the Video Edit window, on the Crop tab, you can crop the video in three methods. • Select aspect ratio You can select an output aspect ratio from the Zoom drop-down list. There are six choices available: Keep original, Full screen, 16:9, 4:3, Letter box and Pan & Scan. • Drag cropping frame Move your mouse pointer onto one of the eight small adjustment boxes on the cropping frame (the dashed line) and drag the crop frame to crop the video. The cropped video appears in the Output Preview window at the same time. • Set the values Type or select values in the Left, Top and Cropped Area Size boxes, and the position and size of the cropping frame will be changed according to the values you set. Note: The defaulted maximum values of width and height are the resolution of the source file.
