Difference Between Windows 7 Home Basic and Home Premium

The most recent operating system from Microsoft, Windows 7, comes in a wide variety to suit the needs and budgets of the consumers. Even the Home edition of Windows 7 comes in basic and premium. Home Basic is understandably cheaper, and limited in capabilities when compared to Home Premium, but that is not the only difference. The Home Basic is not being sold worldwide like the Home Premium. It is only available in emerging markets, where budgets might be a little bit tight, and the lower price point could be the clincher. Home Basic is not available in most developed nations, like the US, UK, Canada, United Arab Emirates, Germany, and Italy, among some other countries. Restrictions have been put in place so that you cannot activate your copy of Windows 7 Home Basic if you are located in the countries where it is not being sold.

There are a number of limitations that apply to Home Basic. It's support for Aero, the glasslike user interface that was introduced with Windows Vista, is only partial, while Home Premium users can take advantage of full Aero support. Limited Aero support is only a problem for computers lacking in hardware, as it is still possible to scale back with Windows 7 Home Premium, but with Windows 7 Home Basic, you are limited regardless of how capable your computer is.

Aside from visual limitations, there are also limitations in terms of it's functionality. The Home Basic does not come pre-installed with the Windows Media Center. This software centralizes the media needs of the user, and adds TV functionalities. It lets you watch TV online, and even acts as your DVR by recording the TV shows that you like via a hardware TV tuner. You can also use the media center to watch movies or videos, and to browse through your photo albums. All of this is still possible with Home Basic, but you would need to access individual applications, like the media player and photo viewer.

1. Home Basic is cheaper than Home Premium.
2. Home Premium is being sold worldwide, while Home Basic is sold only in certain areas.
3. Home Premium has full Aero support, while Home basic only has partial support.
4. Home Premium is able to create and join a home network, while Home Basic is only capable of joining.
5. Home Premium is already equipped with the Windows Media Center, while the Home Basic is not.

How to download Windows 7 Home Basic 64 bit .ISO file from Microsoft's official server?

I have my genuine OEM key of Windows 7 Home Basic at the back of my laptop. I am using Windows 8.1 Pro now. I need to move back to Windows 7 so anyone please provide me the official link for downloading Windows 7 Home Basic 64 bit .ISO file.

Thanks in advance!

Tools you will need for this task:

[eicfg_removal_utility.zip](#) – is a simple tool that will remove the ei.cfg from any Windows ISO disc image, thereby converting the image into a “universal disc” that will prompt the user to select an edition during setup. It's a free download here [Genuine Retail Windows 7 64 bit Installation DVD](#) – this will be used to reinstall Windows 7 Starter 32 bit, any retail edition of Windows 7 32 bit will do, this includes Home Premium, Professional or Ultimate, doesn't matter if its upgrade or full version. You cannot use a 64 bit DVD because there is no 64 bit version of Windows 7 Starter. You will need to create an image of the disc, please refer to our [Notebooks.com](#) tutorial about how to create a digital backup of your software here.

After you have created the image of the Windows 7 64 bit DVD, we will edit the image and remove the ei.cfg file so we can reveal all editions of Windows 7 during the installation and select Windows 7 Home Basic. Lets take a look at doing it step by step.

After downloading the eicfg removal utility, you need to extract it, since its in a .zip file. Just right click it and click Extract All.

Double click the [eicfg_remover.exe](#) file to launch it.

Browse to where the Windows 7 Image (.ISO file) is stored, select it and click Open.

That's it! the ei.cfg file is now removed. The next step now is to reinstall Windows 7 Home Basic.

Burn it to a blank DVD.

ImgBurn - In addition to supporting the creation of CD's from .ISO files, it supports a wide range of other image file formats, and it's free. (BIN, CUE, DI, DVD, GI, IMG, MDS, NRG, PDI and ISO) <http://www.imgburn.com/>

Note: Always use the slowest burn speed (4x or 2x) if offered a choice.

Download 64 bit Windows 7 ISO:

Windows 7 will boot as it normally does into the setup environment, the only difference this time is, you will be given a choice to select the edition of Windows 7 you want to reinstall.

Select Windows 7 Home Basic and proceed with the installation as normal. I suggest that you create a backup once the installation is complete.

How to download Win 7 premium OA Home ISO?

If you have an OEM product key, you will not be able to download Windows 7 ISO files. But you can use this tool to download a legitimate Windows 7 ISO file: <https://www.heidoc.net/joomla/technology-scienc>. Please pay attention to the notifications at the said web page.

Reinstall Windows Preinstalled On Computer.

When Windows comes installed with the computer, OEM computer manufacturers are required to provide at least one way for you to reinstall Windows - your computer should have included either a restore partition on your hard drive, or Windows install/restore disks. Most computer manufacturers also have a feature to make your own install disks.

If the restore partition is still there and was not removed, it will reinstall Windows. There is usually a prompt when you first start the computer telling you what key to press to start the restore - check your manual if you're not sure how to. Or if you have install disks - insert them, restart and boot from them to start the reinstall process.

If you restore it to factory condition, it will be like it was when you first bought it - all preinstalled programs will be installed. Anything you installed after buying it must be reinstalled. This will remove any personal files on the computer, back them up first.

Preinstalled Windows - if you don't have the recovery partition or install disks:

Contact the OEM computer manufacturer and ask them to send you an install disk for your computer - they may charge a small fee. Contact information for the manufacturer of your computer can be found [here](#):
