## The 5 Best Free Icon Maker Software.

An icon is a symbol that represents the identity of any product. It is also considered as a logo or a trademark for uniquely distinguishing a product amongst many others. Having said that, we do not need to go into the depths of understanding the importance of icons because we know that everything that we use these days, whether it is a website, a cell phone, a breakfast cereal, and even the places that we visit such as restaurants, hospitals, hotels, etc. have distinct icons or logos through which we recognize them instantly.

Because of this reason, every one of us falls into a dire need of an icon maker software at least for once in their life. We know that an icon is a combination of art and creativity however, many impractical people think that an icon maker software is not worth wasting their money on. Well, for such people we still have a great deal with which they can easily create outclass icons and that too absolutely for free. Yes, that is true. So here we present to you a list of The Five Best Free Icon Maker Software . Then what are you waiting for? Just read through this article quickly and grab your favorite icon maker software.

### 1. Junior Icon Editor.

Junior Icon Editor is a versatile free icon editor that allows you to create and edit icons while using the Windows operating system as well as only edit icons on Android , iOS and Linux platforms. It means that you can either create an icon right from scratch or you can start modifying an existing image in order to create a new icon out of it with the help of this software. This software provides you with a wide range of colors, 16 million different colors to be precise, for beautifying your icons whereas it provides you with 32-bit color depth .

#### Junior Icon Editor.

You can create icons with professional strokes with the help of tools such as Pen , Brush , Air Brush , Shapes , etc. Junior Icon Editor also gives you the ability to Rotate , Shift or Roll your icons. You can even Sort the images within an icon. This software is capable of copying images and color values and then pasting them onto the clipboard or to any other application. Moreover, you can Import and Export the icons in various formats including ICO , PNG , XPM , XBM , and ICPR by making use of Junior Icon Editor.

### 2. SimplyIcon.

SimplyIcon is the name that says everything about the features of this software. This is indeed a very simple and easy to use free icon maker software which is designed for the Windows operating system. This software is capable of generating different sized icons i.e. 16 x 16 , 24 x 24 , 32 x 32 and even 128 x 128 . You can create your icons simply by dragging and dropping the images on to this program and then it saves your icons in the ICO format. The picture quality of the generated icons is also quite appreciable. You can draw almost any kind of pattern or shape for your icon by making use of different Pens , Pencils , Brushes , Retouch Tools , Layers , etc.

This software has got a huge Color Palette and fully customizable Toolbars . It also lets you use the Number Keys as shortcuts for performing various actions. You can even move your Canvas here and there in order to have a view of your own choice. The best thing about this software is that it also provides you with an Online Help which you can utilize for resolving any of your queries. The only thing that you need to make sure before using SimplyIcon is that you have a .Net Framework installed on your system so that you do not experience any bad response time and poor performance issues.

### 3. IconsFlow.

IconsFlow is an online free icon maker and editor. It has a wide range of ready to use icons available for you that you can immediately download and start using for whatever purpose you want. Along with that, you can also create your own icons with the help of IconsFlow Editor . This icon maker even gives you the flexibility to modify any old icons and turn them into new ones just within a few seconds. Along with a variety of online icons, you are also provided with several different Backgrounds for your icons for making them look more appealing.

IconsFlow supports the SVG , ICO and PNG Export formats. With its Shapes Editor , you can add various different shapes such as square, rectangle, circle, etc. to your icons. The editing toolkit of this icon maker includes features such as Shape Coloring , Shape Scaling , Inner Shadow , Drop Shadow , Background Coloring , etc. You can also choose different Sizes for your icons. The best thing about this icon maker is that New Icons and Trendy Styles are added to it on a weekly basis, therefore, this icon maker never fails to amaze you with its fascinating designs.

### 4. Greenfish Icon Editor Pro.

Greenfish Icon Editor Pro is a free icon maker and editor for the Windows operating system. This software is efficient enough for making new icons as well as modifying the older ones. Moreover, it is also capable of converting simple images to the ICO format. This icon maker software comes with a Drawing Toolkit that is composed of tools such as Pencils , Shapes , Brushes , Texts , etc. which help you in creating attractive icons. The Filters menu of this software is there for you to select various Effects for giving the finishing touches to your icons.

#### Greenfish Icon Editor Pro.

You can make use of the Color Picker tool of Greenfish Icon Editor Pro to select the desired color for your icon. This software also provides you with the Layering feature with the help of which you can easily create professional looking icons. This software even presents you with a Portable Version which you can use when you do not want to install this software on your machine. Despite all these extraordinary features, this software is still very simple and easy to use and has a very intuitive interface that does not overwhelm a new user.

### 5. Iconion.

Iconion is a free icon maker software designed for the Windows and Mac operating systems. If you do not want to create your own icons or you are not good at it, then you do not need to worry about it anymore because Iconion provides you with an extensive Icons Library from which you can easily download whichever icon you like for your product. However, if you trust your designing skills enough, then Iconion has a lot of features in store for you such as Icon Coloring , Icon Shadowing , Backgrounds , Borders , Rotations , etc.

With this software, you can choose any desired Size for your icon from 8 px to 1024 px . You can also select any Shapes you like for your icons. This software has a very friendly user interface that is good for you especially if you have never used this software before. It even lets you Preview your created icons before actually saving them so that you can make the final modifications if needed. Moreover, Iconion also provides you with a Quick Help by presenting you with the Video Walkthrough of the whole application so that you never get stuck while using it.

Across Lite.

Here are the step-by-step instructions for downloading and installing the Across Lite program, the free crossword software that enables The New York Times Crossword subscribers to play or print out the puzzles on NYTimes.com.

Please note that downloading and installing are two separate and distinct steps. You'll need to do both before you are ready to play the puzzles.

First, go to this Web page and choose the appropriate version of Across Lite for your computer's Operating System (OS): [www.nytimes.com/ref/membercenter/help/litsoff.html](http://www.nytimes.com/ref/membercenter/help/litsoff.html) Once you're on the download page for your operating system, follow the instructions to download the Across Lite installation package. You may be prompted to save the program to a specific location. If you are, make sure to save it to somewhere you can find it easily—your Desktop, for example. Once the installation package is downloaded, you will need to install it. The next step depends on your operating system.

Windows: Find the file you just downloaded and open it to start the installation. The process is simple and the installer will guide you. Once the installation is complete, you will see Across Lite in your Start menu, under Programs. If you don't see it listed there, you may need to repeat the installation. If you can launch Across Lite, you're ready to enjoy the puzzles, and you can safely delete the installation package if you wish.

You are now ready to play or print out the puzzles! Just click the crossword puzzle link on the NYTimes.com crossword page and your Web browser will download the puzzle and automatically start up Across Lite with the puzzle loaded.

There are a number of ways to open puzzles. You can access the puzzles through NYTimes.com or by opening puzzles that you have saved on your computer.

You can access the puzzles directly through NYTimes.com by going directly to the The New York Times Crossword page. There, you can choose either Today's Puzzle, or Recent Puzzles.

To open a puzzle you have saved on your computer, drag and drop the file onto the Across Lite program icon. Or launch the Across Lite application, then select File > Open (or the Open button in the toolbar) to pop up a standard Open File dialog box. You can browse to and select a specific puzzle file, just as in any standard application. If you've already worked on the puzzle in Across Lite, you can also double-click the puzzle file to open it automatically in Across Lite.

No. You can save a puzzle to any directory/folder that you wish. It is more convenient to keep all the puzzles in the same folder, but this is up to you.

It's a good idea to save the puzzles in a conspicuous directory—somewhere that you can find them easily.

This usually means that you have not configured your browser to use Across Lite as a helper application, and so the browser doesn't know what to do with crossword files. Your browser should give you the option to Save to Disk . Choose this option, then follow the instructions to open a saved puzzle.

Also, some browsers may provide warnings about unknown file types being downloaded. Since these are the puzzle files, please ignore the warnings and choose to save the file to disk.

This can happen when you open a puzzle directly through the Web site. The puzzle is downloaded as a temporary file, which is then loaded in Across Lite. When you quit your browser, it usually deletes your temporary files, even if you saved that file in Across Lite. This works great if you just want to just print out a copy of the puzzle without cluttering up your hard drive with crossword files. But if you want avoid this issue in the future, immediately go to File and choose Save As as soon as you open the puzzle in Across Lite. Save it to a permanent directory and use that file until you are done with the puzzle. We've tried to make it easy for you; by default, Save As will save it into the Puzzles directory in the Across Lite folder.

The easiest way is to use the Arrow keys on your keyboard to switch between the Across and Down directions in the puzzle grid. Or click on the actual clue to automatically select the correct orientation.

Another method involves using the mouse. Click and drag your mouse cursor across at least two cells in the desired direction within a given word to highlight it.

In Across Lite 2.0, you can enter up to 8 characters in a cell. To enter multiple characters in a cell, select the cell. Then:

Windows: Use the Insert key on your keyboard.

Mac OS: Use the Escape key ( esc ).

To stop, press Return / Enter or Escape ( esc ). This will return you to single-letter mode.

If there are fewer than three letters in a cell, all of them will be displayed in the cell. Otherwise, you'll see the first two letters followed by "." (two periods). You can move the mouse over the cell to show all the letters. Multiple characters in a cell appear in a pop-up box if you are using Windows. For Mac users, they appear in the status bar when that cell is selected.

An alternate way to do this in Across Lite 2.0 is by selecting the Edit menu, followed by Insert and then Multiple Letters .

You can highlight a square by typing Shift - 8 (the asterisk key: \* ) to add a circle around the box. This helps to keep track of squares that have multiple letter entries.

Some puzzles require you to use special characters. In Across Lite 2.0, you can enter special characters (@, #, \$, %, &, +, ?) if required.

An alternate way to do this in Across Lite 2.0 is by selecting the Edit menu, followed by Insert and then Multiple Letters .This will present you with a menu of symbols to choose from

Mac users can activate symbol entry by pressing Shift + Esc on your keyboard.

Go to the File menu and select Print . In the print dialog, you should be able to select Print using two pages . Click OK and follow any other on-screen prompts.

You can also print it in two sections, if you prefer. First, click Customize and select Just the grid , numbers and the legends only. Print it. The second time, choose Customize and select just the clues . Print it. The clues will appear on one page and the grid will be on the other.

Your preferences are automatically saved when you exit the program

Puzzle file names usually take the abbreviated form of the date they were published and, depending on your computer settings, end with a ".puz" file extension (for example: "Jan0104.puz").

You can delete these files the same way you would delete any other file on your computer. The program does not create any other copies unless you explicitly do so yourself.

Windows: If the error message from Across Lite is "Cannot open file for reading" (followed by a long file name) or "Error reading file. Check disk," you can usually fix it by going to your browser options and deleting the Temporary Internet Files. If that does not work, try going to:

C:\Windows\Temporary Internet Files.

Delete all the folders and files and then restart the Web browser.

If the problem persists, you can right-click the puzzle download link (if you are using a Mac, hold down the Option key and click the link) . Select Save Target As (or Save Link As ). This allows you to manually save the puzzle file to any folder on your computer. Save the file in an easy-to-find folder. You can then open the file using the Across Lite program

The first step is to make sure that you have downloaded and installed the Across Lite program, which are two distinct steps. If you have confirmed that Across Lite is installed on your computer, the installation program should have automatically configured your computer to use the Across Lite program when a crossword is downloaded in any browser. If for some reason, this configuration is missing or gets corrupted, the easiest way to fix it is to install the program again.

You can also manually configure Across Lite to handle puzzle files.

Note: This procedure may vary slightly depending on what version of Windows you are using:

Locate a puzzle file on your computer. Right-click the puzzle file and a menu should appear. Select Open with. from the menu. From the list of applications, select Across Lite . If you don't see Across Lite in the list, select Choose Program. and then locate and select Across Lite. If there is an option to Always use the selected program to open this kind of file , check the box to enable it. Click OK .

The first step is to make sure that you have downloaded and installed the Across Lite program, which are two distinct steps. Once you have confirmed that Across Lite is installed on your computer, there are a few ways to let your computer know that you want the puzzle files to open in Across Lite instead of another program

Close all open applications. Go to the Across Lite folder on your computer, select any puzzle file. Go to the File menu and select Get Info . Go to Open with. . . and select Across Lite from the drop-down menu. Where it says "Use this application to open all documents like this," click Change All. . . Close the Info window.

When you launch your web browser and try to access a puzzle, it should automatically load in Across Lite (though you may still be prompted to save or open the file). If this doesn't work, try restarting the computer to make sure the changes took effect.

To contact Customer Care for The New York Times Crossword questions, please use this form

Litsoft has an extensive support site for Across Lite, with installation and trouble-shooting guides, at:
