

free download chrome browser

Google Chrome (32-bit)

Google Chrome is a web browser that combines a minimal design with sophisticated technology to make the Web faster, safer, and easier. Use one box for everything—type in the address bar and get suggestions for both search and Web pages. Thumbnails of your top sites let you access your favorite pages instantly with lightning speed from any new tab.

Desktop shortcuts allow you to launch your favorite Web apps straight from your desktop. Google Chrome offline installer for PC is used by more than half of people online, it's likely to quickly gain momentum among other browsers.

Why use Google Chrome?

Search instantly Search and navigate from the same box. Choose from results and suggestions that appear as you type, including your recent searches and visited websites, so you can get to what you want in a snap.

Type less Tired of filling out web forms with the same information time and time again? Autofill lets you complete forms with just one click. And it works across devices too — so you can skip all that small-screen typing.

Pick up where you left off It brings your open tabs, bookmarks, and recent searches from your computer to your phone or tablet, and vice versa. That way you have your web on all of your devices. Just sign in on your other devices to start syncing.

Experience a smarter web Get the best of Google when you browse with this app. Chrome and Google work together to bring you more relevant suggestions and features across Google products including Voice Search and Google Now.

Make Chrome yours Browse just the way you'd like with themes, apps, and extensions. Get straight to your favorite web destinations with bookmarks and start pages. Once you've set up the browser, your customizations will be kept in sync across all of your devices.

What Is Google Chrome?

Google Chrome is a free web browser developed by Google, used for accessing web pages on the internet. As of May 2020, it is the most popular web browser of choice worldwide, with more than 60% of the web browser market share.

Google Chrome is also a cross-platform browser, meaning there are versions that work on different computers, mobile devices, and operating systems. According to Statista, Google Chrome for Android is the most used version, holding more than 32% of the global web browser market share as of February 2020.

Using Google Chrome.

Using Google Chrome is as easy as using the default web browser on your current computer (such as Internet Explorer, Edge, or Safari). Whenever you want to visit a website, all you have to do is type the web address URL into the address bar at the top and hit Enter / Go / Search.

Like other web browsers, Google Chrome includes basic browser features like a back button, forward button, refresh button, history, bookmarks, toolbar, and settings. Also like other browsers, Chrome includes an incognito mode, which allows you to browse privately without having your history, cookies, or site data tracked. It also includes an expansive library of plugins and extensions.

Chrome's range of extra features, however, goes well beyond the basics.

A Few of Google Chrome's Standout Features.

Here are some of Google Chrome's best features:

It's fast, secure, and easy to use.

Perhaps the biggest draw to Google Chrome is its raw performance. Web pages can be opened and loaded extremely quickly—even when browsing through lots of pages with heavy graphics, ads, or video content. The interface is clean and simple to use, even for beginners, and updates are rolled out frequently and automatically to keep security in check.

You can use the address bar to search Google.

Need to search something? Simply open a new window or tab and start typing whatever you need to search for in the address bar. Then hit Enter / Go / Search and you'll be shown the corresponding Google search results page.

You can sync Chrome settings across devices.

When you use Chrome with your Google Account, you can sync all of your bookmarks, history, passwords, autofills and more. This means that your settings will remain consistent and updated whenever you use Chrome via your Google account on any other computer or device.

Using Google Chrome Extensions.

Google Chrome extensions are available for many of your favorite web services, from Dropbox and Evernote to Pocket and Pinterest. They can be searched and downloaded from the Chrome Web Store.

When you find an extension you want to use, just select Add to Chrome and then Add extension .

A small popup box may appear in Chrome confirming the installation along with a short note about how to access it. A new tab may open with more in-depth instructions that show you how to use all the features of the extension.

To enable, disable, or delete existing extensions, select the three vertical dots in the top-right corner of your Chrome browser. Then select More Tools > Extensions . Select the button switch on any extension to turn it on (blue) or off (gray). Select Remove to delete it.

How to Get Chrome.

Google Chrome is completely free to download and use, but you'll need to use an existing web browser to download it. All you have to do is navigate to google.com/chrome and select the Download Chrome button.

Google will automatically detect the platform you're on so that it can provide the corresponding version of Chrome you need to download. If you're on a mobile device, a popup message will appear to direct you to either the iTunes App Store or the Google Play Store, where you can download the Chrome app for iOS or Android.

Google Chrome can be downloaded and used on the following platforms:

macOS 10.10 or later Windows 10/8.1/8/7 64-bit Windows 10/8.1/8/7 32-bit Linux Android iOS.

Google also offers "frozen" versions of Chrome for Windows XP, Windows Vista, macOS 10.6-10.9. This means that updates are not supported for these versions.

Google Chrome downloaden en installeren.

Google Chrome is een snelle, gratis webbrowser. Voordat je Chrome downloadt, kun je controleren of je besturingssysteem wordt ondersteund en of aan alle andere systeemvereisten wordt voldaan.

Chrome installeren op Windows.

. Klik desgevraagd op Uitvoeren of Opslaan . Als je Opslaan kiest, dubbelklik je op de download om het installeren te starten. Start Chrome: Windows 7: Er wordt een Chrome-venster geopend zodra alles klaar is. Windows 8 en 8.1: Er wordt een welkomstdialogvenster weergegeven. Klik op Volgende om je standaardbrowser te selecteren. Windows 10: Er wordt een Chrome-venster geopend zodra alles klaar is. Je kunt Chrome instellen als standaardbrowser.

Als je een andere browser (zoals Internet Explorer of Safari) hebt gebruikt, kun je je instellingen importeren in Chrome.

Kan Chrome niet installeren door de S-modus.

Als je Chrome niet kunt installeren op je Windows-computer, is de S-modus mogelijk ingeschakeld op je computer. Als je Chrome wilt downloaden en installeren, bekijk je meer informatie over hoe je de S-modus kunt afsluiten. Je kunt ook meer informatie bekijken over hoe je installatieproblemen met Chrome kunt oplossen.

Als je problemen ondervindt bij het downloaden van Chrome op je Windows-computer, kun je de onderstaande alternatieve link gebruiken om Chrome te downloaden op een andere computer.

Download het alternatieve Chrome-installatieprogramma op een computer die verbinding heeft met internet. Verplaats het bestand naar de computer waarop je Chrome wilt installeren. Open het bestand en volg de instructies op het scherm voor installatie.

Het is normaal als je op de gewone downloadpagina terechtkomt. Hoewel de installatieprogramma's er hetzelfde uitzien, laat een speciale tag ons weten welke daarvan het meest geschikt is voor jou.

Zodra je het bestand hebt gedownload, kun je het verzenden naar een andere computer.

Chrome installeren op Mac.

. Open het bestand 'googlechrome.dmg'. Zoek Chrome in het venster dat wordt geopend. Sleep Chrome naar de map Programma's. Mogelijk wordt je gevraagd het beheerderswachtwoord in te voeren. Als je het beheerderswachtwoord niet weet, sleep je Chrome naar een locatie op je computer waar je wijzigingen kunt aanbrengen, zoals je bureaublad. Open Chrome. Open Finder. Klik in de zijbalk aan de rechterkant van Google Chrome op Media verwijderen .

Zo check je welke versie van Chrome je moet installeren:

Selecteer het Apple-icoon op je Mac. Selecteer Over deze Mac . Kijk op het tabblad Overzicht of er Intel of Apple staat naast Processor of Chip.

Als je het Chrome-installatiebestand downloadt, selecteer je de optie die overeenkomt met je apparaat.

Chrome installeren op Linux.

Gebruik voor de installatie van Chrome dezelfde software als waarmee programma's op je computer worden geïnstalleerd. Je wordt gevraagd het wachtwoord van het beheerdersaccount in te voeren.

. Klik op OK om het pakket te openen. Klik op Install Package (Pakket installeren).

Google Chrome wordt toegevoegd aan je softwarebeheerprogramma zodat het up-to-date blijft.

9 Features that make Microsoft Edge a better web browser than others.

Microsoft Edge, the youngest web browser from the Redmond giant, wants to be the strongest and the fastest of all web browsers for Windows. Although it has its flaws, Microsoft Edge actually is in many ways a better browser than others and, in this article, we want to show you some of those features that make it great. Here they are:

1. The fastest browser in many benchmarks.

In terms of raw performance, Microsoft Edge is impressive. According to the JetStream benchmark, Microsoft Edge is the fastest browser on the market. We ran this test on each popular browser on a Windows 10 device and in the chart below you can see the results we got:

Bigger scores are better and, as you can see, the Microsoft Edge browser is 24% faster than Google Chrome, which is the second in this test.

Even Google's own Octane 2.0 benchmark says that Microsoft Edge is the best web browser in the world. The score we got with Microsoft Edge in the tests from this benchmark is approximately 10% better than Google Chrome's score.

In the Basemark Web 3.0 benchmark however, Microsoft Edge scores lower than both Google Chrome, Opera and Mozilla Firefox. The score we got on our test machine was 32% lower than the performance we measured for Google Chrome.

In the end, most benchmarks point to the same direction, which is that Microsoft Edge is faster than the other web browsers available today, for Windows 10.

2. Reading view is comfortable to use.

Using the Reading view feature you can read your favorite web pages more easily. This tool removes all buttons, annoying ads and background images, and changes the page's text size, contrast and layout for better readability. You can enable this mode by clicking or tapping the book icon located on the far right of the browser's address bar.

3. Taking web notes.

Microsoft Edge is the only browser that allows you to make annotations on web pages, without installing other third-party applications. You can highlight a specific text, you can add a typed note, and you can also crop a web page and save it as a picture.

This tool is powered by OneNote. To use it, all you have to do is press the Make a Web Note button from the top right corner of the browser.

4. Sharing is caring.

Another thing that is found only in the Microsoft Edge web browser is the Share button. If you press it, you will be able to share the link of the page you are on. For instance, you can share web pages on social networks like Facebook or Twitter, whose applications you have installed on your Windows 10 device, but you can also use this feature to share web pages via email or OneNote. You can even add web pages to Cortana's reminders. To use this feature, press the Share button from Microsoft Edge's top right corner.

5. The Hub - A single place for all your favorites, reading list, downloads and history.

Compared to other popular browsers, in Microsoft Edge the Favorites, Reading List, History and Downloads tabs are all part of the same panel. This might not be very important, but it can be very useful when you navigate through all these items. We feel that this feature makes navigation easier.

6. Cortana is behind Microsoft Edge too.

Microsoft Edge is the only web browser that has an integrated virtual personal assistant. Her name is Cortana. She will help you to do things faster and easier, like helping you make reservations, providing instant directions to a restaurant, or even fetching the lyrics of your favorite songs.

All you have to do is to press Cortana's logo on the address bar and a pop-up panel containing the data that you are looking for will be displayed on the right side.

You can also ask for information about a word. If you want to use this feature, select the desired word or phrase, right click or press and hold on it, and choose Ask Cortana.

You'll receive information like in the picture below.

7. Energy efficiency a.k.a. more battery life.

If you're using a Windows 10 device that runs on battery and it matters how long it will last you until it depletes, then Microsoft Edge is your best bet. All the tests point to the same conclusion: Edge is less power hungry than other web browsers like Google Chrome, Opera or Mozilla Firefox.

8. Enhanced security.

Microsoft Edge is one of the most secure web browsers today, for one very important reason: Microsoft Edge is a Universal Windows Platform app. That means that it's permanently sandboxed, regardless of what you do and what websites you visit. And because it's sandboxed, that means that Microsoft Edge is somewhat "living in its own world", separated from system resources that could be targeted by hackers or by malicious software that tries to take advantage of the web browser's vulnerabilities.

9. Always and forever 64-bit.

Microsoft Edge is the only major web browser that's always 64-bit. There is no 32-bit version of Edge and there never will be. Considering that all the other popular web browsers today promote their 32-bit versions, Edge really has an "edge" over them. By the way, all the benchmarks we ran in the first chapter of this article were done for 32-bit web browsers with one exception: Microsoft Edge, of course. We did that because most 64-bit versions of other web browsers are in beta stages and are buggy to say the least.

Conclusion.

These are the essential nine things that make Microsoft Edge a better web browser than others. We are not saying that Edge is the best browser on the market, we just highlighted the most useful features it provides. If you know other great features that we haven't mentioned, please share them with us and, if you have any suggestions, questions or problems, do not hesitate to leave a comment below.

Amazing Tips: How to Install Google Chrome Without Internet.

Google Chrome Web browser designed by Google itself, is the fastest and safest in the world. And best of all free. Most likely it's one of your favorite browsers, and you can probably use it every day on all your devices. But maybe one day you decided to install it on a computer or computer from a friend who does not have an internet connection.

You discovered a problem: the installation uses the internet exclusively. "Oh no! Now, that can I do?" You said. Well, my friend! There is good news and we will tell you. Now you can install Google Chrome without internet. And best of all from its official website. Would you like to know how?

Install Google Chrome.

How to install Google Chrome without internet connection.

The form of installation usually we must realize it from its official page. We'll go to <https://www.google.com/chrome/browser/desktop/index.html> first. Second, click the Download Chrome button, and then click Save or Run. If you choose Save double click to begin the installation, the process is completely automatic. When finished, a Google Chrome window will open welcoming you and asking you to register your Gmail email to synchronize the settings. Ready.

The process to Install Google Chrome without internet is called offline installer of Google Chrome (StandAlone) and is so simple that you will never forget.

Add the following parameter to the official page: Standalone = 1.

You can also use this help link to follow Google instructions.

Now you just have to follow the steps of a normal installation and you will have your installer to use it as many times as you want and where you want.
