Siri Android.

Siri für Android ist keine Version des persönlichen Assistenten des iPhones für Smartphones/Tablets, die nicht von Apple sind, sondern eine App für Solo-Chat.

1 2 3 4 5 6 7 8 9 10.

Wenn Sie sich gefragt haben, wie man Siri auf Android herunterlädt, werden Sie in dieser Hinsicht leider keine zufriedenstellende Antwort finden. Denn diese Anwendung hat zwar den gleichen Namen, aber die Wahrheit ist, dass sie nichts mit einer Version des persönlichen Assistenten des iPhones für das mobile Betriebssystem von Google zu tun hat.

Nein, es ist nicht Siri für Android.

Wie Sie wahrscheinlich schon wissen, hat Apple vor einiger Zeit in iOS, dem Betriebssystem, das auf iPhone und iPad läuft, einen persönlichen Assistenten eingebaut, der uns bei der Online-Suche und anderen Anfragen hilft, um uns den Alltag zu erleichtern. Die Sache ist die, dass diese App eher ein Streich ist, denn obwohl wir unsere Zeit damit verbringen können, mit der Anwendung zu chatten, können wir sie für nichts anderes benutzen, außer für das Senden und Empfangen von Nachrichten von einem Bot, der uns mit mehr oder weniger Mehrdeutigkeit antworten wird.

Alternativen zu Siri für Android? Nun, es gibt einige davon, die Sie auch hier bei Malavida herunterladen können. Vielleicht ist derjenige, der sich am besten an das Betriebssystem anpasst, der Google Assistent, der schon viel über uns weiß. Wir können auch andere Apps von Drittanbietern wie Microsofts Cortana, Samsungs Bixby oder sogar Sherpa verwenden. Daher können wir natürlich eine Option von höherer Qualität finden. Tatsächlich entspricht dieses APK von Siri für Android definitiv nicht den Standards der oben genannten Apps.

Siri For Android 2018 APK.

Bring Siri's voice and know-how to your Android device.

Siri for Android 2018 is an unofficial attempt to recreate Siri, Apple's powerful digital assistant, and port her to Android. It isn't sponsored or endorsed by Apple.

No sire shared, but maybe some DNA.

Siri for Android 2018 offers a similar experience to Apple's Siri, though without some of the features and none of the official endorsement. The voice set sounds similar, and Siri responds directly to requests rather than learning your habits. However, because this is not the "true" Siri, some more advanced features, such as map finding, are either incomplete or non-existent. Additionally, compared to Apple's Siri, feature updates are scarce and technical support is very limited; it's impossible for the user to know where some components of the app even came from.

Your Siri fix, if you need one.

Overall, Siri for Android 2018 isn't going to fool anyone for very long: she's not Apple's Siri. But she sounds similar and has similar enough features that she can still be worth using as a digital assistant, assuming that you don't want to use any of the native alternatives such as Google Assistant.
