

download file from telegram with idm

Download file from telegram with idm.

The main window shows a list of downloaded files. This list includes additional information about downloaded files like file size, download status, estimated time to complete, current download speed and download description. You can sort the list by any column by clicking on a column header .

Download control buttons (Add URL, Start/Resume, Stop, Stop All, Delete, Delete All Completed, Options, Scheduler, Tell A Friend) are located above the list. They can be in active or disabled state depending on what actions are possible for the current selection of downloads.

Click on Tell a Friend button to tell your friends about Internet Download Manager!

You can add a new file to download with Add URL button. You can either enter new URL in the text box or select URL from existing ones. You can also specify login information if the server demands authorization by checking "Use authorization" box.

If URL format is valid, "Save As" dialog will appear where you can type file description and choose the path where the file is to be saved. Alternatively you can add description later in "Download Properties" dialog. There are three buttons on the bottom of the dialog window. If you want to cancel the download, press on Cancel button.

If you want to start downloading immediately, press on Start/Resume Download. That will bring file IDM file download dialog. The dialog let you get an additional control over the download. It also shows download progress, average download speed, estimated time to complete, current download state, whether resume is supported by the server, etc. The dialog also has a chart to display download progress for each downloaded file segment.

You can press Pause button to postpone downloading, or Cancel to stop download and to close the dialog. You can always resume download at any time. Note that Resume button restarts download from the last saved position only if remote server supports this function.

Stop button stops downloads for selected files. You can also stop download by pushing Cancel button in File Download dialog or by closing the dialog. Stop All button stops all downloads in progress.

Delete button deletes selected files from the download list. It's enabled only for complete or paused file downloads. If file download is not complete, IDM will ask for the confirmation to delete it from the list.

Delete Completed button (available only in registered versions) deletes all complete downloads from the list.

Scheduler button starts Scheduler dialog window where you can set timer to execute download tasks. Q column shows whether the file is in download queue. You can add/delete file from the queue by right clicking on file name and picking "Add to Queue" and "Delete from Queue" menu items.

All main controls are also available in File menu as well as in Popup menu with the right mouse click on a file in the Download List.

You can pick Properties item in popup menu to see/edit properties of the selected file. You can change the location to save file, add description, change URL or server login information (username and password).

Categories.

In the left side of the main part of the window is a tree of download categories. Internet Download Manager offers the categories feature to organize and manage your files. If you don't need it, you may simply close Categories window and don't select any categories when downloading files. Every download category has a name, a default download directory and a list of associated file types. IDM has several predefined categories like Music, Video, Programs, Documents, etc. You may delete, edit them, or add your own categories.

Right clicking on a categories item will show a menu to allow you to add a new categories, or to edit or delete existing items. When adding a category, you may choose the file extensions to associate with the category, and you may select the default download directory where to place the files of this category.

For example, Documents category could have the following extensions "doc pdf xls txt" and the following default download category "c:\downloads\documents".

IDM will suggest the category and the folder automatically when you download or save files that match the list of file types. If you disable save file dialogs in IDM options, IDM will place downloads to their designated folders automatically.

The customization of the look of IDM main window.

Internet Download Manager has a feature to customize columns and the look of the toolbar.

The standard version of Internet Download Manager has 4 built-in toolbar looks: Large 3D buttons, Small 3D buttons, Large Classic buttons and Small Classic buttons. You can select the toolbar look that you like from these choices, or you may download a new look from Internet Download Manager home site. If you are familiar with graphics design basics, you may also draw your own toolbar for your Internet Download Manager. You may also customize what buttons should appear on the toolbar and in what order.

To customize IDM toolbar look, please right click on the toolbar and the right click menu will appear (look below).

You can select the toolbar style and the toolbar button size from the choices available in this menu. If you need to download new toolbar look for Internet Download Manager, please pick "Look for new" menu item.

To customize toolbar buttons, please select "Customize. " menu item.

In this dialog you can control what buttons should appear on IDM toolbar and in what order. Left pane of the window shows the list of available buttons. Right pane shows the list of buttons in IDM toolbar. You can order buttons by selecting a button in this list, and pressing "Move Up" or "Move Down". You may add and remove buttons by selecting a button, and pressing "Add" or "Remove".

To customize IDM columns on the main window, right click on a column header.

You may select what columns should appear, the width of columns, and the columns order. To enable a column, you should check the corresponding check box for the required column. You may move the column to another location by selecting it, and using "Move Up" and "Move Down" buttons. You may also change the order of columns by dragging and dropping a column header on the required place in IDM main window.

Mantap! Ini Dia Cara Download File Di Telegram Dengan IDM.

Jadiberkah.com – Banyak yang menilai jika cara download file di Telegram dengan IDM lebih praktis. Selain itu tidak perlu waktu yang lama. Sehingga, Anda dijamin puas menggunakan aplikasi ini.

Tapi sebelum menuju cara download file di Telegram dengan IDM, ada baiknya ketahui dulu serba-serbi aplikasi berikut. Agar Anda makin tercerahkan juga tak salah kaprah.

Mengingat, banyaknya aplikasi sejenis yang terkadang kurang pas untuk dipakai. Ingin kerjaan beres dan cepat, malah lemot. Anda tak ingin hal ini terjadi kan?

Cara Download File Di Telegram Dengan IDM, Simak Dulu Satu Ini.

Sebelum menuju langkah untuk downline file pada aplikasi Telegram. Kulik dulu yuk, apa sih idm ini?

Idm merupakan kepanjangan dari Internet Download Manager. Fungsinya ialah membantu perangkat lunak guna melanjutkan unduhan secara langsung.

Lantas apa saja kegunaannya?

Meneruskan unduhan.

Mendownload video dari jejaring sosial maupun YouTube.

Membuat urutan dalam unduhan melalui folder yang berbeda agar mudah untuk menavigasi nya.

Melalui kecanggihan teknologi, semua sangat termudah kan. Banyak hal yang bisa dilakoni makin gampang serta hemat. Tak pelak jika inovasi digital kini banyak digandrungi.

Bahkan, Telegram yang mampu menyimpan kontak lebih banyak makin disukai. Telegram juga mempunyai aneka fitur lengkap, sama seperti aplikasi lainnya.

Bahkan, untuk tingkat keamanan telegram dinilai unggul. Nah, bagi Anda yang bekerja atau berkuat dengan aplikasi berlambang pesawat kertas ini, wajib banget punya aplikasi pendukung.

Maka dari itu cara download file dari Telegram dengan IDM ini bisa Anda terapkan. Penasaran seberapa efektif aplikasi ini, yuk jajalin segera!

How To Direct Download Telegram Files With A Download Manager.

Downloading huge files from Telegram can sometimes be a pain, that's why it is always better to direct download files from Telegram using a Download Manager like IDM. In this article, you will find multiple methods to download files from Telegram using your Web Browser or any other Download Manager for that matter.

Recently, I tried downloading a 1.4GB file from the Telegram Desktop app. But for some reason it was not starting at all, I waited for a longer period of time and there was no luck. At that point of time, I thought how cool will it be if there was an option to download Telegram files using a download manager. For me, Download Manager software always gives the maximum speed. After doing a lot of research, I found some methods to direct download files from Telegram. So let's see how to do it.

Download Telegram Files Directly With Download Manager.

There are plenty of public telegram bots that will help us to direct download files from Telegram. We will make use of these bots to get started.

Now you might be wondering what are these Telegram Bots and how do they help us in downloading heavy files from Telegram.

What are Telegram Downloader Bots?

If you have been using Telegram regularly, then you might already know that fact that there are thousands of Bots for different purposes. Starting from fun bots to super useful bots (like the one that we are about to discuss in this article). These public bots on Telegram will help us to generate a direct download link for any file uploaded on Telegram. Later on, you can use that link to direct download the file using any other software or browser easily.

Download Files From Telegram Outside of Telegram

Follow the step by step method mentioned below to quickly generate a direct download link to your file on Telegram. If the bot mentioned in this method does not work for you then just go to the next section of the article and use some alternative bots to generate a download link.

Step 1: First of all, login to your Telegram account on your Computer. You can either use Telegram Web by visiting web.telegram.com or download and login to the Telegram Desktop application.

Step 2: Once you are logged in to your account. Click on the link below to open the bot.

Step 3: Simply type /start in the message box and send it to activate the bot. Once the message is sent, the bot will be activated. Once activated follow further steps to generate a download link.

Step 4: Go to other Telegram chat where the file you want to download is shared.

Step 5: Select the file and tap on forward button. From the list of chats that appears, select Links to Files and forward the file.

Step 6: In less than 10 seconds, the bot will process the file and send you a direct download link.

Step 7: Just click on the link and open it up. Now a page will appear with the Download button. Just click on the download button and direct downloading of the file will start. You can either download the file using the web browser itself or use any other Download Manager software to download the file.

If the file you are trying to download is a video file then you have the option to directly stream it without having the need to download. Just above the download button, you will find a play button. Clicking on it will start the video playback with the highest quality available.

That's it, we have successfully downloaded files from Telegram using our web browser/download manager easily.

If you use Internet Download Manager to download the file, you will get maximum download speed for sure. For some reason, if IDM is not giving you enough download speed, make sure to use IDM Optimizer to increase IDM speed at least by 2x.

Bots to Direct Download Files from Telegram (Alternatives)

For some reason, if the above-mentioned bot doesn't get it right for you then make sure to try other public bots mentioned below. There are times when the bot might go down or severe overload happens, in these situations, these bots will be helpful. Procedures to download files using all the bots will be pretty much the same.

@getpubliclink_bot @GetPublicLinkBot @filestolinkbot.

Conclusion.

This is how we download files from Telegram using some public bots. Once the download link is generated, you can use the link anywhere to download the file. The best part is that you can even share the generated download link with anyone and they will be able to download the file, too. For some reason, if the Telegram File Download bot mentioned above does not work for you. Try some other bots given in the Alternatives

section. Procedures will be pretty much the same.

Clever ways of Downloading Telegram Videos.

We all know how accessible Telegram is and that's why many users are relying on this messaging app. And there's a high demand for saving certain Telegram conversations or videos since this tool can be used for both personal and business uses, which is why we are going to offer several practical methods of downloading Telegram videos.

Major Ways of Downloading Telegram Videos.

Download via Default Feature in Telegram

Lots of Telegram users may not know that Telegram indeed has a default video downloading function which can be used right away. Here we list detailed steps of how to use this built-in downloading features on both Android and iOS.

Android.

There are two ways to use this built-in Telegram video downloader for Android. The first is to do it manually:

Open your Telegram account and tap the message that has video. Press the blue circle with a downward arrow located within the video clip. The video will then be saved instantly to your device's default download location.

And here's what you need to do to activate the automatic video downloading feature so that your Telegram video will be saved automatically.

Launch Telegram and tap "Menu" located at the app's top left corner. From the drop down menu, select "Settings" and choose "Data and Storage". Tap "When connected WiFi" and browse "Videos" from the list. Then, tick the box besides it. Tap "Save" to keep the changes you made so that the video will be saved.

iOS.

Downloading Telegram videos for iOS users is a little bit different. Unlike the Android version, the iOS version doesn't have an auto save function. Therefore, iOS users need to do it manually:

Launch your Telegram account and search for the chat that has a video and open it. Tap the video and a preview screen will appear, then, tap "Share" which is located at the lower left area of the screen. Next, click "Save to Camera Roll". And to save another video, just repeat the above steps again.

Download via Third Party App.

A mobile application called ApowerREC not only can help you to save Telegram video clips, but also video calls. It enables you to capture all the screen activities on Android and iOS. And it also offers additional functions. For example, it has both camera recording, smart recording features for its Android version and has audio adding, camera image adding functions for its iOS version. Now, let's see how to record Telegram with this smart app:

Download File Dari Telegram Dengan Lebih Laju | Kenapa Telegram Lebih Baik Berbanding WhatsApp.

Selamat pagi kepada yang baca semasa pagi, selamat petang kepada yang baca semasa petang, selamat malam kepada yang baca semasa malam. Mungkin ada rakyat Malaysia masih lagi yang belum kenal apa itu Telegram sedangkan Telegram ini lebih popular berbanding Whatsapp di negara Timur Tengah.

Bagi yang belum install Telegram, cepat-cepatlah install dan join channel Bijak Empire. Dekat situ adalah admin boleh bagitau anda yang artikel baharu telah siap. Bukan tu je, Telegram ini lebih best berbanding Whatsapp. Jika anda ada kawan yang kaki movie, mesti dorang ada Telegram. Jom kita tengok mengapa telegram lagi best.

Fungsi Telegram yang Tiada Pada WhatsApp.

Telegram Channel.

Apa itu channel dalam telegram? Channel ini macam FB page la, hanya admin ja boleh post. Contohnya Channel Movie, admin channel tersebut akan upload movie banyak-banyak untuk anda. Channel ni lebih best dari FB Page kerana lebih bersih, simple dan laju. Nak download dari telegram pun senang, satu klik je. Takdepun nak tekan iklan. Jadi, ciri channel ini amat disukai ramai orang kerana sangat ringkas dan padat.

Supergroup.

Kalau group biasa whatsapp hanya limit 256 orang, sama juga group telegram ada limit sebegitu. Namun kalau anda upgrade kepada supergroup, limit member sehingga 5 ribu orang. Jadi, supergroup pada Telegram amat berguna untuk sebuah komuniti kecil, seperti sifu nak jaga para pelanggan atau anak-anak murid yang berjumlah ribu-riban.

Forward File.

Fungsi ni yang paling special, kalau di whatsapp; anda kena download file dahulu baru boleh forward dekat orang. Manakala di telegram, anda boleh forward file banyak-banyak tanpa guna kuota langsung. Jadi, forward file di Telegram amat mudah berbanding di whatsapp kerana mesra internet dan kuota.

Sticker.

Seperti WeChat, Telegram juga ada sticker. Whatsapp dulu tak ada, tetapi sekarang ada. Cuma bila menggunakan Sticker di Telegram, ia lebih mudah untuk disimpan dan penuh sekali pakej.

Telegram hebat dengan ciri ini, di mana ada bot yang sangat berguna. Mesti korang tak pernah tau kan apa itu bot? bot ialah singkatan robot dimana ia akan buat kerja yang diarahkan. Contoh youtube bot, ada hanya perlu send link kepada bot itu untuk download video tersebut. Itulah sebab mengapa ramai yang lebih suka menggunakan Telegram.

Di Telegram, beribu-ribu bot tersedia untuk digunakan. Jadi, macam-macam fungsi automatik yang anda dapat gunakan. 5 contoh bot terkenal di platform Telegram.

– Untuk mencari mana-mana bot yang anda ingin – Reminder bot – Dapatkan notifikasi kriptowang – Wikipedia tanpa buka website, jimat kuota dan cepat – Uruskan projek kerja anda.

Itu senarai sedikit sahaja, jika ingin mencari bot lain yang mempunyai fungsi tersendiri, boleh cari mereka melalui Storebot. Serang cerita, Storebot ini macam Google atau kamus bagi dunia bot telegram.

Sekarang, jom kita ulas mengenai kelebihan Telegram. Jika kita ni kaki movie, kaki game, kaki download wajib install Telegram. Walaupun penuh dengan konten sensitif ataupun melanggar hak cipta, tapi kita teruskan sahaja.

Kelebihan menggunakan Telegram jika anda kaki download.

File yang diupload adalah percuma.

Nak upload percuma, nak download pun juga percuma. Tanpa batasan had laju dan tanpa iklan. Jadi, benar-benar percuma dan bagus untuk dunia fail digital.

Tanpa iklan.

Tanpa iklan yang merimaskan seperti popup atau fake button. Kalau nak download melalui website, mesti ada iklan yang sangat merimaskan dan sukar untuk download. Kalau di telegram, jika anda tekan button download, maka anda benar-benar download file tersebut semudah ABC.

Jimat kuota.

Kalau buka website untuk download file, kuota anda akan digunakan untuk load website dahulu sebelum anda download file yang dikehendaki. Dengan menggunakan telegram anda boleh jimat masa dan kuota untuk download file.

Pelbagai jenis file.

Jika anda nak download movie, join channel movie. Nak download game, join channel game. Nak download lagu, join channel lagu. Mudah dan ringkas.

Tapi, masih ada kekurangan kalau anda ingin download file berat-berat dari telegram.

Kekurangan Telegram Semasa Download.

Ada speed limit.

Jika internet kita laju, kalau ada speed limit masih mengambil masa yang lama untuk siap download.

File boleh rosak semasa download.

Telegram ini aplikasi sosial, bukan aplikasi downloader. Maka ia tidak cekap nak mengendalikan file download. Jika anda tertutup internet, file anda akan rosak begitu sahaja dan hilang sekelip mata. Kesannya, anda perlu download semula dari awal.

Tiada anggaran masa untuk download siap.

Tapi jangan risau, saya nak ajar trik yang kita boleh atasi masalah tersebut.

Trik download dari Telegram dengan lebih laju, stabil dan lancar !

Dengan menggunakan trik ini, kita boleh cari link download file tersebut dan download dengan menggunakan aplikasi khas. Justeru dengan itu, kita memerlukan aplikasi berikut;

Telegram

Kalau nak download dari telegram, pertama sekali anda perlu memasangkan aplikasi Telegram pada peranti pintar anda.

ADM (Android) atau IDM (Windows)

Kedua-dua aplikasi ini merupakan Download manager. Memang wajib pun pakai aplikasi sebegini, supaya proses download lebih laju, stabil dan dapat elakkan file rosak. 1. Install ADM (Dalam tutorial kali ini, saya pakai ADM bagi Android)

2. Buka Telegram dan cari file yang dikehendaki . Untuk tutorial kalini, saya pilih CCleaner untuk download.

3. Sekarang pula, tekan @Direct Link Generator dan Start .

4. Forward (dalam bulatan merah) file yang dikehendaki kepada bot itu.

5. Selepas itu, bot akan terima file dan reply seperti gambar dibawah;

6. Boleh pilih 'Instant Download' ataupun 'Generate Resumable Link' . Tak tau nak pilih yang mana? Kejam lagi saya terangkan. Dalam contoh ni, saya guna 'instant download' .

7. Tekan 'Open' untuk buka link melalui ADM Browser dan tekan button 'Instant download'

8. Selepas tekan button tersebut, buka ia melalui ADM Editor .

9. Menurut owner bot, ada sesetengah negara seperti kita di Malaysia akan dapat 'SSL Error' ... Maka anda haruslah edit link tersebut dari 'https' kepada 'http' seperti screenshot di bawah.

10. Biarkan beberapa saat untuk loading, lalu tekan 'start' untuk mula download.
