Adobe Acrobat DC Plans & Pricing

Would you like to learn more? Compare versions of Acrobat.

Questions? We have answers.

Acrobat DC is the latest version of Acrobat subscription software. It's the most mobile, productive and collaborative PDF solution Adobe offers, combining Acrobat desktop software and the mobile scan app, the signature app and Acrobat Reader mobile app — enhanced with premium mobile features and premium Document Cloud services.

Your subscription to Acrobat DC includes the following:

Acrobat Pro or Acrobat Standard desktop software — including future feature updates, quarterly security enhancements and improvements.

Adobe Document Cloud services, which let you complete essential PDF tasks with the Acrobat Reader mobile app or in your web browser, including storing and sharing files online. Document Cloud services also enable complete workflows for sending, e-signing, and tracking documents.

Adobe Sign subscription — a swipe-and-tap solution to collect & sign legal electronic and digital signatures on any device.

When you subscribe to Acrobat Pro DC or Acrobat Standard DC, you pay a monthly or annual fee based on the plan you choose. And your product is always the most current release of Acrobat DC. You will never need to upgrade your product as long as you keep your subscription current.

Yes. Acrobat 2020 desktop software is available as a one-time purchase. It does not include quarterly Acrobat feature enhancements or access to premium Adobe Document Cloud services like Adobe Sign via your web browser and mobile devices. To purchase Acrobat 2020, click here.

Yes. Many Acrobat DC tools and utilities are available to streamline enterprise deployments and help control IT costs. To learn more, visit the IT resources page.

Basics.

Adobe Acrobat Reader DC software is the free, trusted global standard for viewing, printing, signing, sharing, and annotating PDFs. It's the only PDF viewer that can open and interact with all types of PDF content — including forms and multimedia. And now, it's connected to Adobe Document Cloud services — so you can work with PDFs on any device, from anywhere.

With Acrobat Reader DC, you can also unlock premium features to do more with PDFs when you purchase a subscription to Adobe Acrobat PDF Pack, Adobe Acrobat Export PDF, or Adobe Sign.

Yes. Acrobat Reader DC is free desktop software available on the Reader download page or wherever you see the Get Adobe Acrobat Reader icon.

Acrobat Reader DC works with Adobe Document Cloud services to take the world's best PDF viewer to an entirely new level. With an intuitive interface, Acrobat Reader DC delivers powerful new functionality to help you get work done from anywhere on any device. The newly expanded Home view helps you access and manage documents, track the one you have shared with others and provides visibility into documents shared with you to view, review, or sign along with detailed information about the task.

Do more with Adobe Acrobat mobile apps:

Get more done with PDFs from anywhere with Adobe Acrobat Reader mobile app for Android or iOS. Use Adobe Scan to capture and transform papers and whiteboards into high-quality PDFs with artificial intelligence and automatic text recognition. Available for iOS and Android. Use the new Fill & Sign tool in your desktop software to complete PDF forms fast with smart autofill.

Store and access files in Adobe Document Cloud with 2GB of free storage. Get instant access to recent files across desktop, web, and mobile devices. Sync your Fill & Sign autofill collection across desktop, web, and iPad devices. Send and track your file with real-time notifications. Know the moment your document is opened, downloaded, or shared.

Purchase a subscription to Adobe Acrobat PDF Pack to unlock premium features in Reader on your desktop, the Acrobat Reader mobile app,

and your web browser.

Convert documents and images into high-quality Adobe PDF files. Re-order pages or combine PDFs into a single file that's easy to read, navigate, and share. Turn PDFs into editable Microsoft Word, Excel, PowerPoint, or RTF files. Combine multiple files into a single PDF. Get signatures from others with a complete e-signature service. Send PDFs to others for review and collaborate in real-time, even with people who don't have Acrobat. Keep everyone on track with set deadlines and reminders. Send, track, and confirm delivery of documents electronically instead of using fax or overnight services. Tracking is available on mobile: Send and track your file with real-time notifications. Know the moment your document is opened, downloaded, or shared. Store and access files online with 20GB of storage.

To access individual tools only, purchase a subscription to Adobe Acrobat Export PDF.

New and enhanced features are typically released on a quarterly basis. To see what's new, read [What's New and Changed for Acrobat Reader DC](#).

You can easily download free Adobe Acrobat Reader apps for multiple operating systems and devices:

Desktop app : Visit the Acrobat Reader download page to get Reader for your desktop. Once there, you can select your language, operating system, and connection speed. Mobile app : To download this app, visit the Google Play or the iTunes App Store. You can also download the latest version of the mobile app for Windows Phone devices.

No. Acrobat Reader DC is a free, stand-alone application that you can use to open, view, sign, print, annotate, search, and share PDF files. Acrobat Pro DC and Acrobat Standard DC are paid products that are part of the same family. See the [Acrobat DC product comparison](#) to explore the differences.

Download your YouTube video history from Google Takeout.

Google Takeout is an official service that enables Google users to export data from their Google account to their local computer system. Users can either download all account related data at once, or select specific Google services they are interested in. Among the supported services are Google Contacts, Picasa Web Albums, Google Voice, and Google Drive.

Google recently has added another service to Takeout. YouTube users who have uploaded files to the video hosting site can now use Google Takeout to download all of their original videos to their local system. Options are available to download the full archive, which includes all videos hosted on YouTube, or use the custom export option to only download the YouTube videos to the local system.

The size of the download can be quite large. This depends largely on the number and quality of videos that you have uploaded to YouTube. The 44 videos of my account were listed as a 7 Gigabyte download, imagine how large the total download size is for someone with hundreds of uploaded videos.

The building of the archive takes some time and depends largely on the number of videos and their size. It feels a bit strange that you end up with a much smaller download size once the building is complete.

Google Takeout displays a size of 4.6 Gigabyte on the building page, and a size of only 768.2 Megabyte next to the download button. The actual download size was 768.2 Megabyte, and I can't really say where the 7 Gigabyte or 4.6 Gigabyte figures came from. The files are downloaded in the format you have uploaded them to YouTube originally.

How to copy YouTube playlist from one account to another.

The link below provides the old answer to this question. The new YouTube playlist play interface is very different. So, what's the trick now? Tired of searching!

5 Answers 5.

Navigate to the URL of the playlist you want to copy. Click on the menu button on the right (3 vertical dots). Select "Add all to." Either add the videos to an existing playlist or create a new one.

In order to see with the "Add all to." button you need to append the following to the playlist URL: `&disable_polymer=true`.

The top answer no longer works, but this reddit answer functions as of May 2021.

You can copy the other person's playlist to the new playlist by taking the url of the other person's playlist, swapping out the www for music (www.youtube.com to music.youtube.com) which will give you the youtube music version of the playlist. From there you can click on the three dots and there will be an option to add all to playlist.

A pretty fast work around for this in almost as many steps as using the non free 3rd party website, with only a few more clicks than number of videos in the playlist would be:

Empty your watch later list On the playlist page, starting with the last video on the bottom of the playlist so they will be in order, add all the videos to "watch later" (there is a little button in the corner of the thumbnails). Be sure to select all of them. Go to video manager > watch later in the left bar (this doesn't show up in playlist view so open up youtube.com in a new tab). Click the select all box. Click the playlist drop down, then select

add to new playlist. Give it a name and a privacy setting, then click create new playlist. To check to see if it worked go to playlists in the left bar and open the one you just created. Go back to your watch later list, select all and click remove to clean up. Sit back and enjoy your watching your playlist on your TV with XBMC :)

The only suggestion I've seen thus far is to go to the playlist, add all the items to your watch later list, then select them all and select to add them all to a new playlist. It's hackish and silly. I wanted to execute some javascript via an in browser editor to add each video to the watch later list in one fell swoop. Unfortunately jQuery doesn't seem to be loaded and I don't feel like writing the straight javascript. Hopefully someone will write some add ons for browsers to do just that. Or possibly go through the YouTube API.

Liking a playlist will add it to the "playlists" section in the vertical menu bar on the left.

I just found out another alternative for grabbing someone's playlist by accident (though the playlist appears in your channel, you don't actually copy their playlist to your own collection of playlists).

I was trying to delete playlists on the desktop, but I noticed some extra playlists there were appearing in my tablet. These playlists were in the vertical menu bar on the left, and I couldn't delete these particular playlists.

Going back on the desktop, I didn't see these playlists when I clicked on "playlists" on the top, which is to the right of your name.

I found out that they weren't actually my playlists. I initially didn't know why someone else's playlist were showing up in my list of playlists, but then I noticed that I had liked their playlist.

Liking a playlist will add it to the "playlists" section in the vertical menu bar on the left (not the top). I suppose that the "playlists" on the left are your playlists, as well as other people's playlists that you have liked.
