Google Play Games.

Google Play Games is Google's answer to the iPhone's "Game Center"; it allows users to easily track their progress in games and compare it to their friends' progress.

Google Play Games was a very necessary addition to the Android game family. It establishes a universal baseline for gameplay and comes complete with achievements, levels, high scores, and more. It makes the Android feel a lot more like a gaming community platform rather than a bunch of isolated apps to play alone. Unfortunately, this was a little bit late to the gaming ring. Apple's Game Center was so successful because it was included with iOS by default.

There's no argument that Google Play Games is a sturdy piece of software. Reviews are generally positive, and there are no known major bugs. However, because it's not included by default, many players aren't aware that it exists or do not care enough to install it. Additionally, it's not automatically integrated in games due to the Android app store's decentralized nature. If more players would join the system, Google Play Games would make for a very fun, universal experience.

In short, this app is a great concept and executed well. Players can easily access their stats and compare them to other players. The achievements feature is especially interesting and makes it feel almost like a console gaming experience. Nonetheless, most players would agree that what makes any multiplayer gaming platform is the player count. Google Play Games just doesn't have the player count, but there's no doubt it will eventually amass many more players.

However, if for any reasons, the app is missing on your smartphone or tablet, do not worry! You have the Google Play Store APK at your fingertips.

Below is the detailed review of this wonderful application. Check it out!

The History Of Google Play Store.

Do you know that in the past, Android users had to visit different platforms to get their desired content. The release of Google Play Store in 2012 was an outstanding move as it combined three major stores (Android Market, Google Music, and Google eBookstore) into one.

At the beginning, the store offered about 450,000 apps and games for users to download. That figure increased significantly to reach millions over seven years. Over time, the app has undergone plenty of changes in interface and design, all of which was to maximize user experience.

It is an interesting fact that Google Play Store generates the highest amount of revenue besides the Internet ad business.

What The Google Play Store APK Got To Offer.

Let me assure you that the Google Play Store APK works exactly like the normal Google Play Store. And if you do not know what is inside the app, here we go!

Applications.

The Google Play Store offers access to a variety of content, including applications, books, music, films, and TV programs. Hit the download button and you can install any app you want onto the device. Most of the apps are free of charge, but you need to pay a small amount of money to get some.

Do note that some paid applications are available to specific countries only.

If you are into an application, tap on it to see ratings and comment from previous users. I truly appreciate this feature as I can learn a lot in the comment section.

Interface.

There is a search bar on the top of the homepage, which allows users to search for content by name or keywords provided by the app provider.

Down below are lists of top apps in different categories. For example, "Top Grossing" features applications that have the highest amount of revenue. Meanwhile, "Trending Apps" list out the ones with increasing number of installation recently.

You can also judge the popularity of the apps by how many times the app has been downloaded. The download count is a badge with colors, which is based on the milestones the app has passed. For example, the badge will be grey if the app has 100, 500, 1,000 and 5,000 downloads.

Updates.

Google Play Store provides frequent updates of application to add new features and fix bugs. It makes sure you have the best experience using these applications.

Security.

Play Store will check your app regularly to detect harmful activities to the device. If there is any security risk found, it will immediately send a notification to let you know. By that way, you can enjoy your application without worries.

How To Install The Google Play Store APK.

After downloading the APK file, let's come to the next part of installing the app onto your device.

Tap on the "File Manager" to open the app. Find the APK you have downloaded and select it. A warning should pop up saying the installation is blocked as it does not form a part of Google Play Store. Tap on "Settings" then. At the Settings, choose the option of "Allow install of non-Play Store applications", then tap on "OK". This way, you have permitted the installation of applications that do not belong to Google Play Store. Return to where your APK file is and tap on it. A box should pop up asking if you want to install the application onto your device. Tap on "Next" and then "Install". There will be a message notifying that the application has been successfully installed on your device.

Above is how you can install the Google Play Store APK. After that, you can start downloading apps on the platform as usual.

Not only those without Google Play Store by default, but others who want to update or revert your current version can download the APK files too. In case you have no idea which version of Play Store you are using, scroll down for the steps.

Google Play APK for Android.

The official store para Google now in your Android; install it and get access to all the app in it.

Google Play (before Android Market) is the official app of Google in which we will be able to discover, install and manager all the apps that we have in our Android devices, both smartphone and/or tablets. All the certificated apps should go though Google Play, and the app is usually installed as default together with the operative system.

But it is not always like that, basically when we are talking about non official version of Android and alterantive ROMs (even that we can corrupt the app in itself). In thiese cases, it will be very difficult that we can install apps and enjoy them fully if we do not achieve to install Google Play in our devices somehow.

So well, in this case, we would just need to download the APK file of Google Play. We only have to download it and copy it in the SD card of our device and have marked the option of settings so we can install apps outside Google Play (Settings, Apps and mark the option "Unkwnown origins"). This APK file is signed by Google, so it is more than truthworthy.

Whne opening the file with a file explorer ( what we will not need if we put it in the download folder) Google Play will be installed in its lastest version and, from this moment on, we will be able to take all the other downloads from the app itself of Google Play, in a safer and official way.
