

**download audio bluetooth driver fo windows 10**

Bluetooth Universal Windows driver model for Windows 10.

In Windows 10, the Bluetooth transport driver interface for all devices is converged and uses the Universal Windows driver model. You can write a single driver that runs on all Windows device platforms.

The Bluetooth audio driver surface area is diverged for Windows 10 and allows the following two options:

You can write a new audio Universal Windows driver that works for both desktop and mobile devices. An existing Windows Phone 8.1 Bluetooth audio driver will run on Windows 10 Mobile.

How to write a Bluetooth Universal Windows driver.

To write a Bluetooth Universal Windows driver, see [Getting Started with Universal Windows drivers](#), and follow the steps in the section titled [Building a Universal Windows driver to build a Universal Windows driver using the Kernel Mode Driver \(KMDF\) template](#).

Then, see the [Bluetooth design and reference sections](#) for implementation guidance.

[Huaqin Intel SST Bluetooth Audio Driver 10.29.0.5152 for Windows 10 Vibranium Update 64-bit](#).

The package provides the installation files for Huaqin Intel Smart Sound Technology (Intel SST) for Bluetooth Audio Driver version 10.29.0.5152.

If the driver is already installed on your system, updating (overwrite-installing) may fix various issues, add new functions, or just upgrade to the available version. Take into consideration that is not recommended to install the driver on Operating Systems other than stated ones. your.

In order to manually update your driver, follow the steps below (the next steps):

1. Extract the .cab file to a folder of your choice
2. Go to Device Manager (right click on My Computer, choose Manage and then find Device Manager in the left panel), or right click on Start Menu for Windows 10 and select Device Manager
3. Right click on the hardware device you wish to update and choose Update Driver Software
4. Choose to select the location of the new driver manually and browse to the folder where you extracted the driver
5. If you already have the driver installed and want to update to a newer version got to "Let me pick from a list of device drivers on my computer"
6. Click "Have Disk"
7. Browse to the folder where you extracted the driver and click Ok.

About Sound Card Drivers:

Usually, Windows operating systems apply a generic audio driver that allows computers to recognize the sound card component and make use of its basic functions.

When enabled by proper files, the characteristics of the sound card (like model, manufacturer, number of channels) are completely available to computers, and all its features are made accessible.

Updating the audio version can improve sound quality, resolve different compatibility issues, fix related errors spotted throughout the product's usage, add support for new operating systems, and bring various other changes.

As for applying this package, the steps are quite simple since each producer intends to uncomplicate things for users: just download the package, run the setup, and follow the on-screen instructions.

Bear in mind that, even though other operating systems might be compatible as well, it is not recommend that you apply any software on platforms other than the specified ones. Also, when the installation has finished, do perform a restart to ensure that all changes take effect properly.

Therefore, if you wish to install this audio version, click the download button and apply the package. Remember to check with our website as often as possible to stay "updated one minute ago."

It is highly recommended to always use the most recent driver version available.

Try to set a system restore point before installing a device driver. This will help if you installed an incorrect or mismatched driver. Problems can arise when your hardware device is too old or not supported any longer.

Gateway lp TouchPad not working after updated to Windows 10.

Thank you for posting your query in Microsoft Community.

Gateway NE56R43u Windows 10 Wireless Driver Update Issues.

Thank you for posting your query on Microsoft Community.

To assist you better, I would like to know how exactly are you updating the driver, is it through Windows update or through any third party application?

I suggest you to run the network troubleshooter and check if it helps.

Network Troubleshooter . 1. Type Troubleshooting on the search bar and click Troubleshooting under Settings. 2. Now type Network adapter in the search option. 3. Click on Network adapter to run the troubleshooter.

If the issue persists, I suggest you to download and install the drivers from manufacturers website.

If there is no updated drivers available on the computer manufacturer's website, then download the latest drivers and try installing it in Windows 8 compatibility mode. Compatibility mode runs the program using settings from a previous version of Windows.

Follow these steps to install the drivers in compatibility mode and check if that helps.

a. Download the driver from the manufacturer's website.

b. Right-click on the driver setup file and click on 'properties' .

c. Click on the 'compatibility' tab and check the box 'Run this program in compatibility mode for' and select Windows 8 operating system from the drop down menu and proceed with the installation. Once this is done, restart the computer and check if the issue persists.

Hope the information helps. Let us know if you need further assistance. We will be happy to help.
