Planning for the apocalypse? A nuclear fallout? Natural disaster? Whatever your reasoning, digging an underground bunker and ensuring it's designed and stocked to help you survive is a big project. But big doesn't mean impossible—with the right planning and tools, you'll be on your way to crafting a hidden underground bunker that keeps you safe in the worst of times!

Avoid locations at the bottom of a steep slope. If your only option is soil with lots of clay, install a French drain.

Repeat this process around the bunker area and average your measurements to get an estimate of the water table level. Don't dig your bunker in an area with a shallow water table, which is 3 ft (0.91 m) or less.

Designate locations for the bathroom, kitchen, washroom, and common area. Consider the furniture that you want to add, such as couches, chairs, and beds. Write or draw each item to get a feel for where everything will be located.

Standard shipping containers are 8 feet (2.4 m) wide, 8.5 feet (2.6 m) high, and one of two lengths: 20 feet (6.1 m) and 40 feet (12 m). Ask about purchasing used shipping containers for a cheaper alternative. Double-check with your landlord or landowner that you can build your bunker prior to having your container shipped. Shipping containers cost between \$3,000 to \$5,000 USD.

Consider a bunker that is 240 feet (73 m) long and wide: it requires 1,152 bags for both the length and width—240 feet (73 m) divided by 2.5 inches (6.4 cm)—which is a total of 2,304 for 1 length and 1 width. This means that total amount of bags per layer is 2,304 x 2 (since there are 2 lengths and widths 2 per layer), or 4,608. Multiply the total number of bags needed per layer by the number of layers for the total bags for your structure. For example, if each layer requires 4,608 bags and you need 6 layers, you need 27,648 earthbags in total (6 x 4,608). Earth bag height will vary depending on how they're filled. After determining how many bags you need per layer, fill up one bag and measure its height. Now, use this to determine how many layers you need. For example, if it's 1.5 foot (0.46 m) tall and you want a 15 foot (4.6 m) tall bunker, you need 7.5 layers (15/1.5). Soil costs between \$12 to \$18 USD per cubic yard.

Select bricks or cinder blocks if you live in an area with extremely cold weather during the winter. Purchase enough cinder blocks or bricks for each layer of your bunker. For example, if your bunker is 10 feet (3.0 m) long, wide, and high and your cinder blocks are 1 foot (0.30 m) long, wide and high, you need 40 for each layer (a total of 2 lengths and 2 widths) across 10 layers high for a total of 400 (40 x 10).

Use a reciprocating saw or the tip of your shovel to saw through large roots. Loosen rocks with a steel bar. Consider hiring or renting heavy equipment to dig your hole. Call 811 3 to 4 days prior to digging to make sure you can do so without damaging underground electrical structures or piping.

Although 5-35% clay works too, the ideal amount is 15-25%, so stick to that whenever possible. Don't use heavy clay as it will contract when it dries and expand when wet. Ask a garden store worker for soils that are used for cob, rammed earth walls, and adobe blocks. Dump out any soil from your sandbags as needed to create corner pieces.

Double-check that you have enough cinder blocks or bricks for each layer of your bunker before starting. Your foundation should be the same length and width as your bunker structure and about 1 foot (0.30 m) deep. Use a spirit level to check the leveling after every 4 to 5 bricks. Stagger each layer or brick with a half piece to give it stability.

If you're on a tight budget and want to purchase wood, make sure you use pressure treated wood.

Cover the air vents on the surface with brush and rocks. Always start by installing the corner screws of the vents for stability. Set your saw to medium speed and always follow the outline slowly and carefully. Invest in an air filtration system for maximum air quality.

Weight the silo plastic down with gravel bags, tires, tire sidewalls, or other ballast material. Purchase 2 layers of silo plastic for extra protection. Swap silo plastic with a plastic tarp or cover for a cheaper alternative. However, bear in mind it won't be as effective.

Use tire sidewalls as opposed to tires whenever possible to prevent water buildup and rodent habitat formation. Build a shed on top of your bunker's entrance to conceal it. Place an outhouse on top of the entrance to your bunker. Add some bushes and rocks from your excavation.

Use batteries to power lights and radio communication for the highest efficiency. Choose diesel generators as opposed to propane or gasoline. Invest in a diesel generator 2kW or smaller to charge your batteries. Call a local power company and inquire about installation costs.

Skip the water heater if you don't mind cold water, but remember that you'll be missing out on hot water during the winter.

Some canned foods examples include yams, carrots, peas, green beans, fruits, chili, chicken, turkey, tuna, and salmon. Dry foods you can purchase include raisins, mangos, apples, apricots, rice, flour, nuts, cereal, granola, powdered milk, and pet kibble. Buy some crackers, beans, canned meat, dried chickpeas, and gelatin desserts. Don't forget some comfort foods, such as your favorite candy, tea, or coffee.

Keep a stash of non-prescription drugs like aspirin, antacids, laxatives, eye wash, rubbing alcohol, and antiseptic.

Add some portable heaters for winter weather.

Stock your washroom area with toilet paper and cleaning supplies.

Purchase alcohol fuel from a marine or hardware store. Keep your utensils, pots, pans, and other cooking supplies in your kitchen area.

Add a small coffee table to make your bunker homier.

About This Article.

If you want to build an underground bunker, choose a dry location with gravel soil and dig a hole up to 4 feet deep to check the water table level. Once you're sure that your location will work and won't flood, dig a hole 2 feet deeper than your bunker's height. From here, you can begin drawing up a floor plan for the bunker, or buy a shipping container for a simple structural solution. You could also build your bunker from earthbags to save money, or use cinder blocks or bricks if you live somewhere extremely cold. Regardless of what you choose, be sure to install air vents in the roof so that the net-free area of your vents is more than your bunker's square footage. Then, power your bunker using batteries, solar panels, and generators. For more advice, including how to stock your underground bunker, read on!

Minecraft Forums.

Welcome to a world where governments have collapsed, billions have died from Biohazardous diseases because nations had gone to war for the last of natural resources. You are one of the last survivors who saw this coming, so you've built yourself a home with no connections to the contaminated air outside.

STUDY THE UNDEAD! Those who were contaminated turned into zombies, but you managed to trap some that you can study in order to try to find a cure.

SCIENTIFIC LABORATORY Need to find the cure, right? With a state of the art Lab, you may just have a chance.

LIVE IN STYLE! Included in this bunker is a beautiful two story home full of comfort and style!

FRESH MEAT. You have to have your meat right. A room full of fresh pork, ham, and chicken is available at your disposal! Grab a sword, and slice.

FRESH AIR! you have to get some air once in a while, but how are you gonna do that if you can't go outside. Visit the indoor garden of course! Complete with trees, flowers, and clean water!

SKYLIGHTS! despite the fact that your stuck inside, you're still going to want to know what time of day it is. The bunker comes complete with several skylights!

SECURITY SYSTEMS Need to seal off an area? Simply destroy the netherrack located at every entrance!

SECRET ROOMS Like the title suggests, there are several secret rooms and passageways. Be warned, not everything is what it seems.

GUNS n' KNIVES Practice your shooting/ knifing skills on the target and conveniently caged zombie!

NUCLEAR FALLOUT There is also an included tunnel that leads you to the nearest city, where fallout is inevitable.

FEEL LIKE I'M MISSING SOMETHING ? Also included is an enormous open space for anything and everything your heart desires! Enjoy!

Best Minecraft Modpacks.

Minecraft Modpacks are all mix up packages of mods or we can say this are the modification packages. There are almost more than fifteen thousand Modpacks available now in different-different themes. In Minecraft every game has their own single mods available but it will be very time taking and uses more space if we install single mods for everything.

What is Minecraft Modpacks ?

Minecraft modpacks is the video game which is played by players to explore more and more buildings. It is very interesting to play this game. In Minecraft each thing has its own mods but it is better to have a package of each thing together and so the modpacks are created. In this all types of modpacks are available like tech mods, travel mods and many others.

Every mod supports some particular versions of Minecraft Modpacks as they are built for that only and it cannot be used for others.

Best modpacks for Minecraft xbox one.

As we said that there are many modpacks available to use for minecraft modpacks xbox on e but some of the best modpacks which can used be used and securely are as listed below:-

FTB Academyminecraft xbox modpacks.

FTB Academy is the best mod package as it is very user friendly and the person who is using the mod packages for the first time can also easily understand. In this mod you get each and every instruction about how to use and setup the package.

This package is designed in a very user friendly way and you will find it a fun activity to use and modify the packages for Minecraft. As soon as you installed the FTB Academy you will get to know all about it. The tutorial is present there in the installation package. Just follow their steps and you will easily set up all the things correctly.

Sky Factory 4.

Sky Factory 4 is very used mod packs and it is fun to use this mod. It is so because in this you will be left on one island or place on sky where you have built your building for your survival but the drawback is that there is very limited resources.

In this you will be placed at the small land with a tree and with some objects that you have to use. Now you have to progress and should build your empire and consume more and more space so that your island could be bigger. After that you will be able to get more and more resources and you would be facing many obstacles also but you should move ahead and start your day. So, you should once try this mod pack for minecraft xbox modpacks 2020.

Stone Block 2.

Stone Block 2 is similar to Sky Factory 4 but in this you have built the empire underground not in the sky. In this you will see only rocks and stones. You have to do digging which you find very difficult in the starting but as you get the tool you will enjoy digging the rocks.

In this mod there is one system known as EMC in which you can exchange the stone for other items like 10 stone for 10 diamonds etc. It is very interesting because you can get the valuable things in return for those stones.

When you go ahead you will have many other tools by which you can build your own sky, sun, moon and clouds and many other things. So, go through this mod pack maybe you will find it very interesting and can become fond of it.

FTB StoneBlock 2 Here we go again!

Farming Valley Modpack.

Farming Valley Modpack has been named by keeping in mind of Harvest Moon and Stardew Valley. In this mod pack as you can get by the name only it is related to farming or agriculture. In this you cultivate your land and grow the crops and live there happily.

In this you will be thinking that it is quite easy but it is not as easy as there will be more challenges. In this you will sell the crops for money and by this you will earn. You can see that there are caves in which monsters will be there so you have to fight with them. It would be an interesting mod pack because you can get something new in this.

Revelation FTB.

FTB Revelation is the full package of everything in this you can enjoy every type adventure, fun and many more. In this package FTB has included 200 mods and it is the largest collection made by FTB. It cannot be run in slow system as a powerful system is required to run this package.

The user who is not using the modpacks before should not try it because in this you will not be able to learn and you will be getting confused. As a starting user try some other package and then shift on this package.

Forever Stranded.

Forever Stranded is the mod in which you will be living in your own adventure country or space. In this of course, the resources will be limited and very rare. In this you have to experience all the things which you face when you are placed as the unknown place alone.

In this you have to fight with the mobs at starting only otherwise the mod will become more challenging. You have to see all types of situations like hunger, fatigue, no water, weather changes, monsters and many other problems.

The Twilight Forest.

The Twilight Forest is the fully new world in Minecraft as it designed for those who have already played the minecraft modpacks free download . In this mod they will find something new and adventurous. Once you have got this mod pack you will feel like you are in some other world.

This mod is started once you throw the diamond in the pond before it the mod will not be launched. The Twilight Forest is full of adventure. You will find new monsters, new enemies and other leaders whom you have to defeat if you want to go ahead. So the users who have finished all modpacks and want something new and adventure full thing try this package. You will love it very much.

About as rare as iron, though it only appears below layer 32.

Make no apologies, and don't remove your mod. This would be like me asking Nikolai to remove More Explosives when he released it after me. More accurately, it would be like he asking me to remove my mod while his WAS STILL IN DEVELOPMENT. But that didnt happen and we worked together for the benefit of both. You can't copyright an idea, and his accusing you of stealing is just childish. Just the other day i came across mo splosions, which heavily borrowed from my mod on naming specific blocks. Did i get angry? No, i gave him some rendering code that he needed. Both mods can exist quite independent from the other without incompatibilities, just share notes on class names and ids.

That said, pretty good mod, I wish you luck.

Thank you for the support. I was a bit scared about this whole situation, because I hadn't even known about his/her mod. I feel a bit better about it. I am going to release an update soon that will make my mod very different from theirs (not saying what's in it yet).
