If you are interested in playing any game for Switch on pc here is your guide.

If you don't have a NINTENDO SWITCH and THE GAME you are downloading you are doing an illegal thing First of all I want to remind everyone that if you don't have a nintendo switch and the pokemon game you are about to download, you are about to commit an illegal act. We have created this guide only for those who already have the nintendo switch and the game and just want to emulate it on the PC.

Playing Pokemon sword and shield on pc for free is very easy. What do we need?

1. Yuzu the Nintendo Switch emulator.

Perfect let's start immediately:

Let's go to Yuzu's website and download their emulator for pc, after downloading the emulator you have to install it, the procedure is simple and intuitive, there is no need to do any type of operation or change.

Now that we have downloaded the emulator, installed it and started it, we are at a good point to play any Nintendo Switch game on our PC.

2. Download Pokemon Shield & Sword for PC.

Now we are going to download the ROM of the game, I highly recommend downloading the ROM in xci format, for the simple fact that it is the ideal format if after times also do a randomization process of all the wild Pokemon, trainers, gyms and possibly nuzlocke.

On this site you can find the ROM you have: Yuzu Roms – Yuzu Key.

On Yuzu Roms we just have to find and download the rom we want to use on Yuzu, the process is quite intuitive, no matter which of the downloaded sub sites will all be fine, I suggest Torrent for sheer convenience. Once downloaded, simply extract it and tell Yuzu where it is from the main screen of the open program. And here you can play your fantastic Pokemon without problems.
