How to Download YouTube Videos in Chrome.

This article was co-authored by Luigi Oppido. Luigi Oppido is the Owner and Operator of Pleasure Point Computers in Santa Cruz, California. Luigi has over 25 years of experience in general computer repair, data recovery, virus removal, and upgrades. He is also the host of the Computer Man Show! broadcasted on KSQD covering central California for over two years.

The wikiHow Tech Team also followed the article's instructions and verified that they work.

This article has been viewed 1,502,581 times.

This wikiHow teaches you how to download a YouTube video onto your computer from within the Google Chrome web browser. Your best bet for downloading HD videos without ads or restrictions is using 4K Video Downloader on your computer, but you can still use a handful of websites to download videos in Google Chrome. Keep in mind that most YouTube download sites are ad-sponsored, and they won't be able to download copyright-protected videos; most YouTube download sites also can't download videos in 1080p. Since downloading YouTube videos violates Google's terms and conditions, Chrome extensions that purport to do this usually don't work.

Download videos that you've uploaded.

You can download MP4 files of videos that you've uploaded to YouTube in either 720p or 360p, depending on the video size. You can also use Google Takeout to download all the videos that you've uploaded.

Sign in to YouTube Studio. From the left panel, select Content . Point to the video you'd like to download, and select Menu then Download .

Watch how to download your videos.

Take a look at the following video from the TeamYouTube channel on how to download videos that you've uploaded to YouTube.

Why can't I get 1080p videos from Youtube?

Hi, I uploaded a 1080 test video to youtube. The source was from www.v6rz.net, an mpeg2, 1080p, 29.97fps file. The youtube player shows a 1080p version available, but the Firefox extensions download helper and download flash and video only show max 720p versions. The video is here <http://youtu.be/WJZuScUC0qw> Why can't I d/l the 1080p version? I specifically wanted to test something.

Btw, the video came down as 16:9, 720p, 209Kbps, avc High@3.1, cabac/1 ref, 192Kbps audio @ 44.1KHz, AAC (lc). Is there an up-to-date table of resulting video formats?

Ok, finally getting somewhere. The problem was that I didn't restart *all* my Firefox windows. And of course, I lost all my tabs in the process (Restore previous history just gave me the "Install extension" tab).

I can only get the 1080p stream as video only. I think that's why many of these extensions don't work; apparently only up to 720p is available as a combined video/audio. In order to get 1080p, I have to download separate audio and video streams, then install ffmpeg to have them combined. Also, you only get the 128Kbps AAC audio this way - the 720p stream has 192Kbps audio, so ideally you'd download the 720p combined, 1080p video, then somehow mix and match them.

But for testing what the average viewer gets presented, the default 1080p combo is what I want.

i think that browsers (with the help of the connection speed) dictates what will be shown by default.

i made three attempts:

1st pass -- in my case, since i only have DSL speed (1.4Mb/s, or 123Kb/s actual transfer speed) my Opera browser always defaults to 360p videos. if i want to see anything higher, then i have to manually select it, if available.

2nd pass -- so, after the video finished, i selected the 1080p HD, but when the video finished, it turned out to be a 1280x720p. i double-checked the setting and the 1080p HD selection was grayed out. must have happed in the 2nd pass auto-decision.

3rd pass -- then, i select the 'rewind' icon and then quickly selected the setting icon and the 1080p HD selection was again available. by that time, the video (thanks to slow DSL) just began to play. when it finished, it turned out to be the 1080p HD selection. i double-checked the setting and it was not grayed out.

perhaps all these were isolated events with your videos and/or, it takes youtube several days or longer to process your videos, and people received different results over that time period. I'm just theorizing. hope this helps you figure things out. youtube is quirky, to say the least.

YouTube Downloader not Working? Here's a Simple Reason Why.

YouTube is the second largest search engine next to Google and continues to dominate all video streaming platforms available today. YouTube is slowly but surely becoming an integral part of our social lives today. They're always coming out with fresh updates and enhanced features, ease of use, personalized content, and much more. And while the site brings in millions of users daily, downloading and watching videos offline is still a popular alternative for many.

It was always relatively simple to download videos from YouTube for offline viewing. But with the ever-changing terms of service and updates to YouTube's fair use policies and restrictions on third-party sites, you may find that you can't download YouTube videos that you once could so easily before. So what should you do if you can't download YouTube videos anymore? We'll help answer that for you in this article.

Can't Download from YouTube Anymore? We Have a Solution for You.

Many times you find programs or some YouTube downloading sites can be buggy or less than perfect. Or the site is down and has issues with server connections and such. That's quite normal. However, it mostly depends on how the team behind the app or service handles these hiccups. Airy is a YouTube video downloader for Mac that incorporates everything you'd want in a comprehensive downloader - while having a supportive and dedicated team behind it as well.

So with Airy, you can:

Easily download full HD videos from YouTube Download YouTube videos into MP3 format Batch downloading of playlists and channels - all in a few simple clicks Multiple simultaneous downloads for quicker access to videos Constant improvements and updates with the latest technology for best user experience and satisfaction.

Airy Offers the Simplest Way to Download YouTube Videos to your Mac.

1. Download Airy to your Mac and activate the licensed version for full feature-access and unlimited capabilities. (Users get two free downloads with Airy's free version).
2. Find the video, channel, or playlist you want to download and copy the link. Paste it into the Airy window.
3. Choose the file format you'd like to download. (Choosing MP3 lets you extract the audio from the video link).
4. Once you're ready to download, hit the "Download" button and let the process begin.

Y2Mate - A Quick Online Working YouTube Downloader.

Y2Mate is an online service that lets you download Youtube videos in tons of different resolutions and formats. So whether you're choosing to go with audio, or video, 144p or full 1080p, Y2Mate can do it for you. It's quick and easy and simple to use right away.

Step 1: Copy the URL of your chosen YouTube video.

Step 2: Paste the URL into the search bar and click "Start".

Step 3: Choose from the list of available files to download and click "Download" to download the video to your computer.

Addoncrop YouTube Video Downloader Browser Extension.

The Addoncrop YouTube Video Downloader is another great tool that users can benefit from. Similar to an app like Airy, this video downloader browser extension allows users to make the most out of HD quality downloading, convert videos to MP3, capture screenshots, and download embedded videos as well.

What's great about this extension tool is that once you install it on your browser of choice, it will automatically activate and place a Download icon below any video you come across on YouTube. By clicking this button, you'll be able to choose from a range of formats and resolutions to download in and within minutes your downloads will be available right on your Mac.

It's truly a simple and easy option for those who aren't interested in having a standalone app on their system. Whether that be to save space or have a more seamless in-browser experience, Addoncrop YouTube Video Downloader is a worthwhile recommendation to explore further.

The Truth Behind Why You Can't Download from YouTube Anymore.

"Why can't I download YouTube videos anymore?" This is a common question that we see come up as a number of third-party YouTube downloaders experience bugginess and issues with performance. In essence, there can be a whole host of reasons why a previously working YouTube downloader may stop working. But we've narrowed it down to the five most common ones. These are:

YouTube has either changed or updated its coding protocols and other site layout details that may prevent users from downloading videos. The URL you may be inputting into the downloader may be unrecognized or invalid to the downloader. The downloader you're using may be outdated/needs to be updated to accommodate for YouTube's most recent changes. You may even experience issues if your browser is running an older version as well. Perhaps you're attempting to download a video that's protected by copyright laws such as private videos. The firewall system you have on your Mac by be interfering with the downloader's ability to download videos.
