Asus Uses BitTorrent to Boost Software Downloads.

Asus, one of the leading computer product manufacturers, has recently started to offer BitTorrent powered downloads to its customers. With BitTorrent the company says it can speed up downloads and get software to its customers in less time.

BitTorrent is without doubt the fastest and cheapest way to distribute large files online. Still, there are only a handful of multinationals who actually use the technology – computer manufacturer Asus is one of them.

With a net profit of close to a billion US dollars in 2008 Asus is one of the big players in the computer business. They are also no stranger to BitTorrent, as they've been making BitTorrent supported hardware for years, including the first BitTorrent router.

Recently the company decided to embrace BitTorrent even further, and use it to boost the download speeds on the tens of thousands of downloads they offer on their website. It is currently enabled on all larger downloads listed on the official website.

"In order to speed up software download process, ASUSTek is now implementing BitTorrent DNA technology. Through this technology, the software you need can be delivered to you with less time," Asus informs their customers.

Consumers looking for drivers or software will now see a P2P download link next to the regular http downloads. When the P2P link is clicked Asus explains the process to first time users, after which they will be asked to download the BitTorrent DNA client.

Asus is offering BitTorrent boosted downloads.

DNA stands for BitTorrent Delivery Network and is developed by BitTorrent, Inc. The software runs in the background on your computer and uses BitTorrent to speed up regular downloads, which means that customers will share the files they've downloaded with people who are downloading the same content.

Of course we would rather see regular .torrent links instead of the closed DNA software, and that is also the main disadvantage to Asus's implementation. In the past BitTorrent's DNA has been causing problems for some people and although these issues have reportedly been resolved, it still leaves a bad taste with some people.

Nevertheless, it is good to see that billion dollar companies are interested in, and willing to take advantage of BitTorrent. In the end it comes down to a classical win-win situation for both parties. Consumers get faster downloads and Asus a reduction in bandwidth costs.

Asus ROG G75VW Audio Driver for Windows 10 + Quailty configuration.

Hello guys! Finally, a great message! A release of the unofficel drivers which works for the ROG laptop has been released! Not specified for the ROG G75xx But it works very well! Both the Sub and treble/mid range works! It just need some simple configurations i made some which works kinda great not the best configs but it works!

REMEMBER TO UNINSTALL THE OLD DRIVER BEFORE INSTALLING THE NEW ONE!

First start by opening the program:

After that we would like to start by fixing the Headphones Start by pressing the small icon here:

Then we check the Redirected Headphones.

After that go into Sound manager and enable 5.1 Surround sound Start by right clicking the Sound manager.

After that select speakers and go configuration in the left bottom corner which should bring up a box where you can select between 5.1 Surround sound and Stereo sound select 5.1 and press next Now you can do things like you want to i like to config everything so it would be perfect but you can just click next again if you are lazy If you are like me then uncheck the Center and Rear speakers and press next because we only have 2.1 Sound then we come to the treble speakers selection which is simple the surround speakers is going to be unchecked and that is it press next and that is it from here!

Now it is time to do some work in the software again! Start by configurating the Bass so it would match your behaves I prefer to have it loud then configurating it in the preset.

Now we will take a look at Preset because that is where it gets tricky The preset is a thing which takes long time to understand and i don't even understand it ether but i made it sound really great! Feel free to config it like me That should be it! After long time waiting we have a beta sound driver which works! Thanks to VIA audio for FINALLY releasing their own and ASUS We're still waiting for your drivers! Have a nice and enjoyable day with great quality sound! Feel free to ask questions!

Thread: G75VW - Audio in Win 10 Fixed. Thanks VIA.

They fix everything, subwoofer working, headphones working and must important VDeck working again.

I guess now I can enjoy my G75 again.
