To recover mistakenly deleted files or lost data from Windows 10 computer or other storage devices, MiniTool offers the professional free data recovery software.

Can't Delete a File or Folder in Windows 10?

Sometimes you may face this problem: you can't delete a file or folder in Windows 10 no matter how many times you conduct the delete operation. How to delete files that cannot be deleted? How to force delete a file in Windows 10 computer?

Generally if a file is being opened or used by another application or program, Windows 10 computer will mark the file in a locked state, and you can't delete, edit or move this file. When you are not using this file, then it will be unlocked. But sometimes the file unlock process may be not successfully completed, which may cause the file delete operation can't be accomplished, along with a warning showing that the file is opened by another program.

If you insist to delete the file or want to force to delete it, you may try these three methods in this post to unlock and delete the file.

How to Force Delete File or Folder in Windows 10? - Quick Guide.

in Windows 10. Type `del + file path` command, press Enter to force delete file. Type `rmdir /s /q + folder directory`, press Enter to force delete folder Windows 10.

How to Force Delete a File/Folder That Cannot Be Deleted Windows 10.

How to delete a file/folder that that won't delete in Windows 10? Normally you can take the basic steps below at first.

Close all apps and programs on your Windows 10 computer, and try to delete the file again to see if it can be deleted. Close File Explorer. You can click Start -> Type Task Manager and choose Task Manager to open it -> Find Windows Explorer and right-click on it and choose End task to close it. Restarting Windows 10 can sometimes fix many issues. You can try to reboot your Windows 10 computer and delete the file again to see if it can be deleted successfully. You can also conduct a virus scan to see if there is a virus in your Windows 10 computer. Check the file property. Make sure the file or drive is not read-only. Related: how to remove write protection on SD card, USB, disk drive, etc.

If all the five measures above don't make any difference, then you can continue to try the three ways below to force delete files or folders that can't be deleted.

Method 1. Force Delete Files/Folders Using CMD.

Can't delete file? You can try to use Command Prompt to delete files or folders that cannot be deleted in Windows 10.

How to force delete a file with "DEL" command:

Step 1. You can press Windows + R keys on the keyboard, type `cmd`, and press Ctrl + Shift + Enter to run Windows Command Prompt as administrator.

Step 2. Then input the command line and hit Enter to force delete the file in Windows 10 with CMD. The command line is like this: `del c:\users\alisa\desktop\test.txt`. Replace "`c:\users\alisa\desktop\test.txt`" with the path of the target file. And do remember to include the file extension in the command.

To check the path of the file, you can right-click the file and click Properties.

Force delete folder in Windows 10 with "`RMDIR /S /Q`" command:

To delete a folder that won't delete in Windows 10, you can type `rmdir /s /q E:\test` command in Command Prompt window. Replace "`E:\test`" with the path of the folder.

How to easily corrupt a file like Word, Text, Excel, PDF, MP3 file, etc. so it won't open? Here are 3 free file corrupters to let you corrupt a file online.

Method 2. Use Safe Mode to Unlock and Delete Files.

To delete a file that can't be deleted, you can also try to start Windows 10 in safe mode to unlock and delete the file.

Step 1. Click Start -> Settings -> Update & Security -> Recovery -> Restart now (under Advanced Startup), to enter into Windows recovery environment.

Step 2. Click Troubleshoot -> Advanced options -> Startup Settings -> Restart.

Step 3. In Startup Settings window, you can press F4 or F5 to boot into safe mode in Windows 10.

Step 4. Delete the file or folder in Windows 10 Safe Mode.

Step 5. Restart Windows 10 and your computer will auto exit Safe Mode.

This post teaches you how to show/view folder size in Windows 10 File Explorer if Windows folder size is not showing. 4 ways are included.

Method 3. Use Shift + Delete to Force Delete File/Folder.

You can select the target file or folder and press Shift + Delete keyboard shortcut to delete the file/folder permanently. This file deletion method won't pass the Recycle Bin.

Note: Need to mention that this post is not talking about deleting Windows system files. Windows system files are usually protected against deletion. Deleting system files can cause issues of your Windows 10 computer OS. So please do not delete system files randomly.

If the file is corrupted or your Windows 10 computer reports that it can't find the file, you may take some measures to conduct the disk repair process to see if it can fix this error and fix corrupted system files.

Quick Video Guide:

How to Recover Mistakenly Deleted Files from Windows 10 Computer.

How to Clear Recent Files on Windows 10.

Are your files have been accumulating and displayed a list of recent files and folders on your computer? Is it affecting the performance of your computer? This guide will provide you with tips to clear recent files on Windows 10.

Amy Dennis.

May 12, 2021 • Filed to: Recover & Repair Files • Proven solutions.

Accumulation of day to day files that you download, create or the system develops itself are the junk files. You might have noticed a list of recent folders and files that had recently visited or opened that is displayed at the bottom of the window of the File Explorer. Although this makes it easy for you to access files that you open frequently. So in this manner, you can significantly access to the files you like to explore or get back to or work on despite burrowing by the File Explorer. However, some people like to keep their files in some places where they can be kept for privacy.

So, let's get started to clean up the files on Windows 10.

Part 1: Where can I see recent files on Windows 10.

1. File Explorer's Quick Access panel.

It is the customizable toolbar in the file explorer containing a set of commands i.e. independent of the tab on the ribbon to be displayed. The Quick Access Toolbar provides you with quick access to some of the most commonly used features like save and undo. Windows 10 acquainted the Quick Access see with File Explorer. At whatever point you open a File Explorer window, you'll see a rundown of frequent folders and as of late got to records, just as show frequent folders under the Quick Access thing in the navigation pane. It helps clients by listings links of the most often got to folders and files. This content is assembled by "Recent files" and "frequent folders", and as a matter of course, settings can show up to ten folders and twenty documents. Although quick access is a decent little component in Windows 10, it may not be for everybody.

2. A Jump List will show all recent files associated with a particular application on Task Bar.

Jump list is all those files and folders that you have opened which shows up while you do a right-click on it. This means that windows remember every document that you opened but after it is checked to let it display. This is called a Jump List. Jump Lists can be found on the application symbols that show up on the Taskbar or the Start menu. On the Taskbar, Jump Lists show up for applications that you've stuck to the Taskbar and applications that are at present running.

Individual applications of the Jump Lists are stored in different locations to be accessible through File Explorer. A Jump List represents all recent files in association with a particular application. Once any file or folder appears on the Jump List, it might indefinitely remain on the Jump List. If you added the Recent Items alternative to the Start Menu, you or any other individual could see every one of the records you as of late opened!

In case you're a protection crack who doesn't need another person to perceive what sort of reports you've been opening, clearing this rundown is fundamental! Nonetheless, beginning with Windows 7, there was another component presented called a Jump List. With Jump Lists, that usefulness fundamentally moved from the Start Menu to the taskbar in Windows 8 and Windows 10! For instance, if you open a few Word reports and, at that point right-click on the Word symbol in the taskbar,

On the off chance that nobody else utilizes your PC, that is fine, however, generally, it resembles a fast look into your stuff! Microsoft made this component for accommodation purposes, so you could without much of a stretch open a website page you visit frequently or record that you had as of late dealt with.

Each program needs to separately support this element to see the rundown. If a program doesn't support Jump Lists, you won't see anything when you right-click on the symbol.

Part 2: Clear Recent Files on Settings of Windows 10.

To clear the recent files from on the Settings, you need to follow the steps which are as follows:

Step 1: Go to Settings and then click on Personalization.

Step 2: Click on start on the left pane and switch the option from on to off i.e. Show recently opened items in Jump Lists on Start or the taskbar.

In this manner, you will be able to clear all the recent items except the pinned items.

Part 3: Clear Recent Files using File Explorer.

Step 1: Open File Explorer, click on File and select Change folder and search options.

Step 2: Under the General Tab, Click on the clear button for immediate clean up of the file explorer history.

Clearing up the files in this way assists in removing files from Quick Access. But, there is a possibility that some file might be left uncleaned and you need to do that again.

Part 4: Clear individual items from Recent files or Frequent folders.

Although recent files can be cleared by different methods, you also have the option to eliminate individual items from Quick access without clearing all your recent files or oftentimes used folders. On the off chance that you need to hold most of the rundowns and dispose of a few things in particular, at that point you don't have to clear the whole rundown. To clear frequent folders and recent files in Windows 10, you need to do the following:

Step 1: Open File Explorer on your PC and click on a quick access view.

Step 2: Identify the folder or an individual file that you want to remove from the recent files list. Right-click on the folder and select "Remove from Quick access" in the menu that opens.

Part 5: Manually Clear Jump Lists.

Although the concept of Jump List had been introduced with Windows 7. But, since its launch, it has always been a nice feature in improving

productivity and workflow. But, Sometimes you need to delete all such items on the list. Removing all the items on the list has been easy. You only need to:

Step 1: Right-click on the desktop and select Personalize from the drop-down menu.

Step 2: Click on Start and then scroll down to turn the Show recently opened items in Jump Lists on Start or the taskbar from on to off.

Part 6: How to Completely Clear Recent Document with Stellar BitRaser File Eraser.

Introduce BitRaser File Eraser.

An advanced file eraser software that deals with permanent file, internet history, application traces, and folders for erasing from more IT assets and storage devices like SSD, hard drive, laptop, desktop, and storage media eliminating the chance of recovery.

Erases installed traces of an application, internet, and system activity. Supports 17 different international erasure standards such as DoD 5220.22-M, NATO, etc. Provides Erasure certification to assist in meeting compliance. Automates the process of erasure for folders and files. Generates Erasure reports Search and Erase Compatible with all versions of Windows and servers. Removes chat messages Clean Data from Email Clients Sanitizes unused space of the disk.

Steps to repair corrupt Word file with BitRaser File Eraser.

Data can be erased on Mac using BitRaser File Eraser followed by a series of step i.e.

Step 1: Download Stellar BitRaser for the file on Windows and connect the Mac hard drive with the PC.

Step 2: Launch Stellar BitRaser and select your Mac drive.

Step 3: Click Erase Now button to erase the Mac hard drive on Windows.

Erasing data using BitRaser eliminates any possibility to recover erased data by using any data recovery software or services which might also include forensic tools. Therefore, any erased file by BitRaser can not be ever recovered. Make sure to check your files before you erase them. Don't be in much hurry to bear any great loss.

Delete music, movies, and TV shows from your device.

Remove content that you downloaded to your iPhone, iPad, iPod touch, Mac, or Android device.

Delete music and music videos.

To delete music from your iPhone, iPad, or iPod touch, use the Apple Music app or the Settings app. To delete music from your Mac or Android device, use the Apple Music app.

How to delete items in the Apple Music app.

Open the Apple Music app and find the item that you want to delete. If you see the download button next to the item, the item is stored in the cloud, not on your device. When items are stored in the cloud, they don't use any storage on your device. On your Mac, hover your pointer over the item, then click the More options button that appears. Or on your iPhone, iPad, or Android phone, press and hold the item that you want to delete. Tap or click Remove. From the menu that appears, choose Remove or Remove Download. Or choose "Delete from Library" to remove the item from all devices that you use with Apple Music.

How to delete music in Settings on your iPhone, iPad, or iPod touch.

Open the Settings app. Tap General, then tap iPhone Storage or iPad Storage. Scroll to Music, then tap it. Swipe left on any artist, album, or song. Or if you want to delete all music, swipe left on All Songs. Tap Delete.

More about deleting music that you purchased.

If you deleted an item from your device and you don't want the item to stream to your device or appear in the cloud, hide the item.

If you used your computer and a USB cable to manually sync the music or music videos to your iPhone, iPad, or iPod touch, turn off syncing.

Delete movies and TV shows.

To delete videos that you downloaded to your iPhone, iPad, or iPod touch, use the Apple TV app or the Settings app. To delete videos that you downloaded to your Mac, use the Apple TV app.

Delete items in the Apple TV app.

Open the Apple TV app. Tap or click Library. To delete an item from your Mac, hover your pointer over the item, click the More options button, then click Remove Download. To delete an item on your iPhone, iPad, or iPod touch, tap Downloaded, swipe left on the item, tap Delete, then

Delete Download.

Delete movies or TV shows in Settings on your iPhone, iPad, or iPod touch.

Open the Settings app. Tap General, then tap iPhone Storage or iPad Storage. Scroll to TV, tap it, then tap Review Apple TV Downloads. If you don't see Review Apple TV Downloads, you don't have anything downloaded to your device. Find the movie, show, or episode that you want to delete, then swipe left on it and tap Delete.

If you can't delete your movies or TV shows.

If you see the download button next to the item, the item is stored in the cloud and isn't using storage on your device. If you don't want the item to appear in the cloud, hide the item.

If you used your computer and a USB cable to manually sync movies and TV shows to your iPhone, iPad, or iPod touch, turn off syncing.

How to Clear Your File Explorer "Recent Files" History in Windows 10.

You've probably noticed that File Explorer keeps a list of files and folders you've recently opened, displaying them at the bottom of the File Explorer window. It's handy, for sure, but there are times you'll want to clear that file history. Here's how to do it.

If you really don't like Windows keeping that history at all, you can turn off recent items and frequent places altogether. If you do like having your history around, it's nice knowing that you can occasionally clear it out and start from scratch. To do it, you'll use the Folder Options dialog, which also gives you control of a lot of other interesting features.

In File Explorer, click the "File" menu and then choose the "Change folder and search options" command.

On the General tab of the Folder Options dialog, click the "Clear" button to immediately clear your File Explorer history. You're given no confirmation dialog or anything; the history is cleared immediately. When you're done, click OK to return to File Explorer.

That's all there is to it. Back in File Explorer, you can now see that no recent items are listed.

Would it be handier if File Explorer just gave us a button on the toolbar for clearing our histories? Yes, but at least the option is there if you know where to look for it. And it just takes a few seconds.

How to Delete Downloads From Your Computer.

If your internet browser is slow to start, web pages take longer to load, downloads sputter and stall out, or your browser freezes, you could have an issue with too many files in your download folder. If you want to learn how to delete downloads from your computer and popular web browsers like Firefox, Google Chrome, and Microsoft Edge, here's how to make it quick and painless.

Why You Should Delete Your Downloads.

Every time you use the internet, you'll encounter countless files that can be downloaded, like apps, toolbars, browser extensions, pictures, documents, and videos. Any time you download something from the internet, it's stored in your Downloads folder, which can cause your web browser and even your entire computer to slow down considerably.

If you're using a family or public computer to navigate the internet, it may be in your best interest to make sure your history is deleted. Additionally, you could be risking the data of everyone who uses the computer being exposed, not just your own.

You could also be inviting security and privacy issues. Some downloads can contain malware that installs viruses and monitors your web activity, keystrokes, and browsing behavior.

How to Delete Downloads From Your PC.

You may be shocked to learn that if you neglect clearing out your download and temp folders, you could have hundreds of megabytes or even gigabytes of data clogging up your system. Even compressed files like program installers can take up a surprising amount of disc space if left alone.

If you want to delete all the download files from your web browsers and computer all at once, here's how to do it.

Navigate to the search bar next to the Windows Start Menu.

If you don't see the search bar, press Windows Key+S to open it.

Enter "File Explorer" and select File Explorer.

Select the Downloads folder on the left side of the window.

To select all files in the Downloads folder, press Ctrl+A. You can also select individual files, but this will take slightly longer.

Right-click the selected files and select Delete.

Select Yes to confirm the deletion of the files.

Right-click the Recycle Bin in the top left corner of your Desktop.

Select Empty Recycle Bin to delete the downloads from your PC permanently.

How to Delete Downloads from Firefox.

Select the hamburger menu .

Select Options .

Select Privacy & Security .

Navigate to the Cookies and Site Data section, then select Clear Data .

You can also choose to have all downloads removed at the end of your browsing session. This can be done by checking the box next to Cookies and Site Data. Your cookies and site data will be automatically deleted when Firefox closes.

Select Manage Data for more options about managing site data like cookies.

To delete data for a single website, select the website, then select Remove Selected . To delete them all at once, select Remove All .

Close the Options page. Any changes you've made will automatically be saved.

How to Delete Downloads from Google Chrome.

Open the Chrome browser.

Select the three vertical dots in the upper-right corner of the screen.

From the drop-down menu that appears, select Downloads .

Select Open Download folder from the new window that opens.

To select all files in the Downloads folder, press Ctrl+A . You can also select individual files by selecting on each one.

Right-click the selected files and select Delete .

Right-click the Recycle Bin in the top left corner of your Desktop.

Select Empty Recycle Bin to delete the downloads from your PC permanently.

How to Delete Downloads from Microsoft Edge.

Open the Microsoft Edge browser.

Select the three horizontal dots in the upper right-hand corner.

Select the Settings icon at the bottom of the menu.

Select Choose what to clear under Clear browsing data .

Make sure that the box next to Download History is checked, then select Clear .
