The Best SuperDuper Equivalent for Windows 10 or 7.

Are you looking for bootable backup for Windows 10 or 7 like SuperDuper! for Mac? AOMEI Backupper is the perfect SuperDuper Windows equivalent for backup and cloning.

By Teresa / Last Updated October 19, 2020.

About SuperDuper.

SuperDuper, also referred to as SuperDuper!, is a fantastic backup and cloning program that comes with an easy-to-use interface and uses understandable simple language. SuperDuper's features are that it can make reliable bootable backups and has a built-in scheduler to keep your backups up to date.

This allows you to backup all data on your computer and then boot from backups where you'll find everything from the computer that you backed. This means that when you delete an important file mistakenly or encounter hard drive failure, you can easily restore your system or files without needing to reinstall/restore your entire computer. For detailed information, please see the SuperDuper User Guide.

Unfortunately, SuperDuper only works on Mac OS on Apple computers (PS: Backup software for Mac). So, does SuperDuper have a Windows version? Afraid not. At the moment Shirt Pocket doesn't make a Windows version of this amazing backup program.

Let's find a SuperDuper Equivalent for Windows.

Even though SuperDuper doesn't have a Windows version, we can still find good backup software on the internet. Unfortunately, when we search Google loads of results for apparently equivalent programs come up. How can we know which ones are reliable?

First, we need to check if the programs duplicate the functions of SuperDuper and if they include a 'Backup' feature that is actually producing bootable backups. If the program doesn't have a bootable backup function, then we need to check whether it contains both a 'backup' feature and a 'bootable media' creation tool.

If it has both of these, then the last thing we need to check is whether it has the ability to schedule backups so that they are always kept up to date.

Next, we need to check if the software has the ability to backup and restore data in a user-friendly manner without including loads of jargon. If it doesn't use clear language, then we need to find another program as just one mistake could cost you all of your data.

Lastly, we should look for an application that has a range of useful functions baked into it. For example, when you schedule a backup to external hard drive, it should have the option to choose incremental or differential backups as these are a great way to save drive space.

If you choose to do a full backup it will take up much more space and take longer to complete than an incremental or differential backup. You can learn the differences between the different types of backups in our article on incremental & differential backups.

The Best SuperDuper Windows Equivalent to Protect Your Data.

AOMEI Backupper Professional Edition is our recommended SuperDuper Windows equivalent backup application. It has all of the features of SuperDuper but importantly works on Windows and is compatible with multiple versions (Windows 10, 8.1/8, 7, and XP).

AOMEI Backupper provides you will the ability to backup and clone your drive, utilize incremental or differential backups, and create bootable backups. Now, we will walk through how to create a bootable backup in AOMEI Backupper.

AOMEI Backupper offers 30 days free trial and 90-day unconditional money back guarantee. Download its free trial and install the software to have a try.

Step 1. Insert a USB or CD/DVD and create a bootable media using AOMEI Backupper. Once the process has been completed the program will be pre-installed on the bootable drive.

Step 2. Connect the external drive that you will use to your store backups. Go to Backup > Disk Backup in order to backup everything on your drive including the system programs and files and personal data. You should select the source disk and destination path.

Step 3. Click Schedule to set up 'auto backup'. You have either Daily, Weekly, Monthly, Event-trigger options to select from. Click Start Backup to run the backup immediately or just add it to the schedule.

Helpful Tips:

System Backup, Partition Backup, and File Backup are all available depending on your needs.

Scheme: manage your backup images by automatically deleting old backups.

Backing up to NAS, network storage, USB drives, thumb drive, etc. are all supported.

If you need a particular file in the disk image, you can explore images from My Computer.

After following the guide above you will always have up to date disk backups and a bootable device in case anything goes wrong. If you do experience hardware failure or a system crash just boot into Windows via the USB and perform a disk restore.

Clone Bootable Hard Drive via AOMEI Backupper.

AOMEI Backupper's Disk Clone feature has the same effect as using SuperDuper, yet it works perfectly on Windows PCs. AOMEI Backupper provides Disk Clone, System Clone, and Partition Clone tools that can help you clone bootable internal hard drives to external hard drives or SSDs, either for duplication purposes or for disk upgrades. The cloning tools will allow you to boot directly from the cloned drive, however, if you choose to leave both drives in the system you will need to change the BIOS order in order to boot from the cloned drive.

Step 1. Connect the target disk to your computer and launch AOMEI Backupper. Next, click on Clone > Disk Clone .

Step 2. Select the source disk and the destination disk.

Step 3. Click Start Clone .

Helpful Tips:

By default, AOMEI Backupper clones hard drives using intelligent mode . This means that it only clones the used blocks on the source drive. This allows you to clone larger hard drive to smaller ones.

Sector by sector clone feature clones every section on the hard drive. This requires the target disk to be equal to or larger than the source disk. This mode can be used to recover deleted files and partitions.

Tick SSD Alignment if you are cloning your hard drive to an SSD.

Important: If you want to clone your disk using a laptop you will need a USB-to-SATA cable. Some USB bridge chips reserve some spare sectors to store internal data on the hard drive, this means that when you use a USB interface the reported maximum LBA will be smaller than when you use a native SATA controller. This can lead to the partition mapping function being incompatible with the altered maximum LBA settings and results in the cloning speeds slowing down. In some cases, it may even cause the target disk to be unbootable. As a result, we recommend you use the backup and restore method on laptops. For more information on this, please see SONY laptop hard drive upgrade.

Summary.

When you're considering a SuperDuper alternative for Windows, AOMEI Backupper does a fantastic job. Both SuperDuper and AOMEI Backupper are designed to protect users, their systems, and help them manage their data. Once disaster strikes both SuperDuper and AOMEI Backupper can help you recover all of your important data and restore it to your new system (make sure you regularly backup your data).

If you want to protect an unlimited number of computers within your company, you should choose AOMEI Backupper Technician Edition. With the inbuilt AOMEI Image Deploy tool, you will be able to deploy/restore system image files on a server-side computer to multiple client-side computers over your network.

SuperDuper! for Mac.

SuperDuper! is a backup and recovery program designed for macOS computers. It lets users create a bootable backup and secure all the data stored on their computers. With functionalities like a built-in backup scheduler and drive duplicator, SuperDuper for Mac can come in quite handy in case of a system crash that wipes all the files, folders, and apps from your computer.

With the help of SuperDuper download , you can create carbon copies of documents, image files, music, and other content stored on your computer's hard disk. In case of a system wipe, you can restore everything from the app's intuitive interface. SuperDuper alternatives like Free Mac Data Recovery , Mac Free Any Data Recovery , Clonezilla , and Mac Data Recovery also offer similar features.

What does SuperDuper do?

SuperDuper is a beginner-friendly disk copying program that you can download on your macOS computer. It lets users back up their drives, so that in the event of a system crash, all the files, folders, and programs can easily be restored. Unfortunately, the software only works on internal drives and doesn't back up data stored on USBs, CDs, and other external drives.

Nevertheless, a simple hack for this is to copy all the contents on your hard drive, and SuperDuper download will automatically create a backup. In terms of creating automatic backups , the software comes with a scheduler that you can use to create a copy of all your latest files every few hours . Alternatively, you can set a date and time to update the backup created using SuperDuper.

Does SuperDuper have a simple interface?

One of the best things about downloading SuperDuper is that it offers a clean and simple interface that is suitable for beginners. In other words, users who aren't very tech-savvy can easily use SuperDuper to create a backup of all the files stored on their macOS computer. In addition to this, all the features available on the app come with a little description that explains their purpose.

For users who are more experienced with disk copying programs, SuperDuper Mac offers additional functionalities. It provides custom scripts that

they can run to create backups and restore files and folders. Moreover, it lets users maintain multiple versions of an operating system across different drives. SuperDuper for Mac also comes with a comprehensive user guide and has an active online community.

What are the features of SuperDuper?

Once you complete SuperDuper download, it creates a backup of your files, applications, and operating system, so that in the event of a system failure, you don't end up losing them. It does this with its three primary functions - Smart Wake, Smart Update, and Smart Delete.

After you create a backup, the Smart Update function automatically updates the backup with the latest files and applications. In case you want to update the backup file at a certain date and time, you can use the Smart Wake tool. Smart Delete gets rid of any duplicates that may appear.

When it comes to creating copies of your drive, SuperDuper features a sandbox backup option that lets you create a partition of your hard drive. You can use this partition to save a bootable version of your computer's drives, applications, and system updates. The sandbox backup creates a limited-resource environment that's useful for testing new apps and updating the operating system.

While SuperDuper isn't very fast, it does create full backups of all files stored on your macOS computer, irrespective of their format. Thanks to this feature, you can easily create a clone of your boot drive and save it on another hard disk drive, image files, or partition. The program's only drawback is that it doesn't copy files from external drives, such as USBs, portable hard disks, CDs, and DVDs.

Nevertheless, the application is quite user-friendly and lets users of all levels create and restore backups. Its intuitive interface comes with a Finder function via which you can locate any file or backup and then restore it to its original location. The app also lets users schedule backups and put the computer to sleep after it's done.

How do you use SuperDuper?

When you first launch SuperDuper download, you'll be able to see a clean interface with a central drop-down menu. Clicking on it will reveal different options like Copy and Erase, New Files Copy, Update, and more. You can also select the Smart Update icon to update the backup file with all the latest data.

Shirt Pocket, the developer of SuperDuper, designed the program in such a way that beginners find it easy to create and restore backups. For this, they kept the design of the application simple and minimalistic. Furthermore, they included bits of information explaining the purpose of each available function. The company also provides customer support via email and online forums.

Is SuperDuper for Mac free?

While SuperDuper isn't available for free, it does offer a free trial period. Considering that it is one of the only recovery applications that can exclusively copy macOS and Apple file systems, it is worth the investment. Moreover, the app also provides users with a range of features in an organized interface.

Should I download SuperDuper?

If you're looking for an application that can copy macOS files, folders, and applications, download SuperDuper. Not only is the app suitable for beginners, but it also provides users with a range of features like a backup scheduler, disk copier, and sandbox backup creator. With the help of this app, you can create a boot drive and save copies of all your files and folders.

Author's review.

SuperDuper is the wildly acclaimed program that makes recovery painless, because it makes creating a fully bootable backup painless. Its incredibly clear, friendly interface is understandable, easy to use, and SuperDuper's built-in scheduler makes it trivial to back up automatically.

Download superduperkyle free.

SuperDuper! v3.5, which is Big Sur compatible and produces bootable Intel and M1 backups, is now in Beta: see the Shirt Pocket blog for information.

Have no fear. SuperDuper v3.3.1 is here, and it includes full Catalina support!

SuperDuper is the wildly acclaimed program that makes recovery painless, because it makes creating a fully bootable backup painless. Its incredibly clear, friendly interface is understandable, easy to use, and SuperDuper's built-in scheduler makes it trivial to back up automatically. It's the perfect complement to Time Machine, allowing you to store a bootable backup alongside your Time Machine volume—and it runs beautifully on your Mac!

Version 3.3.1 lets you ignore "missing drive" errors during scheduled copies, and also improves Smart Wake, which ensures your backups happen whether your Mac is awake or asleep, and won't turn on your screen if your Mac is already awake.

This new version also improves Smart Delete, an awesome new capability that minimizes the possibility of disk full errors while maintaining safety with no speed penalty, native Notification Center support, a Finder extension to quickly run copies, and other improvements. SuperDuper can even create and copy from snapshots, which means with an APFS backup drive, you can restore today's Smart Update, yesterday's, etc! It's super cool.

SuperDuper's interface confirms all your actions in simple, clear language to ensure that the end result is exactly what you intended. Take a look, and click for additional screen shots!

The SuperDuper! Main Window.

We all know that using the Macintosh is usually a trouble-free experience.

Except when it's not. Like when:

Your hard drive starts making that horrible clicking noise that signals an imminent meltdown A momentary lapse of coordination causes your MacBook Pro to take a dirt nap The system suddenly fails to boot Your most important day-to-day application isn't working with the system update you just applied The new driver you just updated is causing your Macintosh to crash That lousy software you just tried didn't come with an uninstaller, and scattered files all over your drive You need to restore a stable copy of your system, but don't want to lose what you've been working on You need to test new versions of the operating system with production data you can't afford to lose.

It happens to all of us, eventually. And recovering can be a painful, error-prone, time-wasting experience, if it's even possible at all. Until now.

Flexibility Speed Ease of use Acclaim Experts Testers.

Carbon copies. And a whole lot more.

SuperDuper is the most advanced, yet easy to use disk copying program available for macOS. It can, of course, make a full backup, or "clone" — in moments, you can completely duplicate your boot drive to another drive, partition, or image file. In even less time, you can update an existing clone with the latest data: use Smart Update and, minutes later, your backup is completely up to date!

Faster than a speeding bullet — and more accurate!

SuperDuper isn't just the most powerful cloner available: it's incredibly fast, too. Its Smart Update feature evaluates hundreds of thousands of files and directories in just minutes, automatically updating your clone to reflect any changes you've made on the original drive — including custom icons, HFS+ attributes, ownership changes. the works! It can even copy (and Smart Update) Time Machine backup volumes!

Expertise not required.

SuperDuper comes preconfigured, ready to perform all the most common copying and cloning tasks. We've pored over the Apple documentation so you don't have to. Every step of the process carefully follows all Apple recommended policies and procedures.

Whether you're making a full backup to a disk image, using Smart Update to update an existing backup, or making a complex clone to test a software update, the process couldn't be simpler: select the source drive, the destination and the appropriate script. Click Copy Now, and SuperDuper does the rest.

Doveryai no Proveryai.

Most companies would cherry-pick their feedback, and include selected quotes from happy customers. Sure, we could point you to our 4.5 5 star review from Macworld, or many other raves. We could even point you to our back-to-back 2005 and 2006 Eddy Awards!

But we're not going to do that. Instead, we encourage you to ask some friends, and look for yourself! Here's a simple Google query for "superduper macintosh review" to get you started.

(It means "Trust but Verify".)

Clones for experts.

Regular backups aren't always the best way to recover for the risk takers out there who jump on every software update. Unless you take specific steps, fully restoring a backup restores everything on the drive, overwriting both the system and user files. If that's what you want to do, great. But it usually isn't, because everything you've done since the backup would be lost!

With SuperDuper, though, you can easily "checkpoint" your system with a Sandbox, preserving your computer's critical applications and files while you run on a working, bootable copy. If anything goes wrong, just reboot to the original. When you do, your current Documents, Music, Pictures — even iSync data — are available! You can get back to work immediately!

Clones for industry!

SuperDuper has enough features to satisfy the advanced user, too. Its simple-but-powerful Copy Script feature allows complete control of exactly which files get copied, ignored, even aliased ("soft linked" for the Unix inclined) from one drive to another!

SuperDuper is perfect for software developers, software "seed" sites, QA testers, even system administrators:

Developers and Seed Sites Need to keep up to date with the most recent weekly build of a new operating system? Use the provided "Copy with Shared User Files and Applications" script, or create your own. A few clicks later and your clone is ready to upgrade, without unsafe downgrades, or unsupported "intermediate build" upgrades! QA Testers Need to regress against a large number of operating system targets, or other types of

fixed configurations? Simply save a series of images, and in minutes you can restore them and be ready to test. System Administrators Need complete control over building a standard image for one, one hundred or one thousand systems? SuperDuper's Copy Scripts make it easy!

Get cloned.

Give SuperDuper a workout on your own system. Clone to your heart's content—for free. See what else is possible. When you're convinced that SuperDuper is a terrific solution—and a great value at US\$27.95—you can click buy now , have the registration entered with a single click , and start using its advanced features immediately!

Download the free trial now!

Download Now!

You can download SuperDuper! v3.3.1 right now and back up and clone your drives for free — forever!

You can register right from the application, or simply click to buy it now.

v3.3.1 now available!

Big Sur (macOS 11) users: we can make bootable Intel and M1 backups: see the Shirt Pocket blog for instructions.

The latest version of SuperDuper! is faster, better, fully compatible with macOS Catalina (10.15) - in fact, it's compatible with macOS 10.10 and later, has Smart Wake , Smart Delete , Notification Center support , additional control capabilities, and improves many aspects of the user experience. Of course, it still includes great features like snapshot support , APFS recovery volume support , Backup on Connect , Eject after Copy , Sparse Bundle support, lets you store a bootable backup alongside Time Machine backups, copy Time Machine backups to other drives, and run scheduled copies on demand. As with every update, we've polished and improved many other aspects as well. (A full list can be found by selecting Help > Revision History .)

It's a free update for users: existing copies of SuperDuper! will auto-upgrade the next time they are run, or you can download now.

Want More Information?

SuperDuper's full, 60 page User's Guide is available for download. Unanswered questions? Contact us.

System Requirements.

SuperDuper v3.3.1 requires Yosemite (macOS 10.10) or later, is Catalina (macOS 10.15) compatible, and supports both APFS and HFS+ volumes.

Big Sur (macOS 11) users, see the Shirt Pocket blog for instructions.

Mavericks (10.9) users can download v3.1.1, Mountain Lion (10.8) users can download v2.9.2, Lion (10.7) users can download v2.8, Tiger (10.4), Leopard (10.5) and Snow Leopard (10.6) users can download v2.7.1, Jaguar (macOS 10.2) users can download v1.5.5, and Panther (macOS 10.3) users can download v2.1.4, the last releases available for those older versions of macOS.

Please note that SuperDuper! is not designed to back up to CDs, DVDs or Tape, and needs a location (other than the boot volume) to store the backup - typically a volume on an internal or external (FireWire, USB2, USB3 or Thunderbolt) drive.

SuperDuper! only copies APFS (Apple File System) and HFS+ (Mac OS Extended) volumes.

Note also that USB drives do not allow booting Power PC based Macintoshes under any version of macOS: this is not a SuperDuper! limitation, but one of the OS. If you would like to boot from a backup stored on an external drive, and have a Power PC based Mac, please purchase a Mac compatible FireWire drive for Power PC Macs. Intel Mac users can boot from USB 2, USB 3, Thunderbolt or FireWire drives.

Built by Macintosh users, for Macintosh users.

Like all Shirt Pocket products, SuperDuper has been carefully designed, tested and implemented to ensure an excellent user experience. But should you have a problem, our technical support is free!

Contact.

Testing White Paper Available!

Check out our white paper that describes how SuperDuper can be used to test multiple versions of an operating system (or anything else that requires system isolation). This methodology is great for ADC members and other "seed" sites!

Fragmentation White Paper Available!

We've also got a brief white paper describing how SuperDuper can be used to quickly defragment your system.

ProStudioMasters.com

High-resolution audio offers the highest-fidelity available, far surpassing the sound quality of traditional CDs. When you listen to music on a CD or tracks purchased via consumer services such as iTunes, you are hearing a low-resolution version of what was actually recorded and mastered in the studio. ProStudioMasters offers the original studio masters — exactly as the artist, producers and sound engineers mastered them — for download, directly to you.

What do I need for playback?

You may need additional software / hardware to take full advantage of the higher 24-bit high-res audio formats, but any music lover that has heard 16-bit vs 24-bit will tell you it's worth it!

A wallpaper or background (also known as a desktop wallpaper, desktop background, desktop picture or desktop image on computers) is a digital image (photo, drawing etc.) used as a decorative background of a graphical user interface on the screen of a computer, mobile communications device or other electronic device. On a computer it is usually for the desktop, while on a mobile phone it is usually the background for the 'home' or 'idle' screen. Though most devices come with a default picture, users can usually change it to custom files of their choosing.

A mobile wallpaper is a computer wallpaper sized to fit a mobile device such as a mobile phone, personal digital assistant or digital audio player. The height is often greater than or equal to the width. Wallpapers can typically be downloaded at no cost from various websites for modern phones (such as those running Android, iOS, or Windows Phone operating systems). Modern smartphones allow users to use photos from the web; or photographs captured with a phone's camera can be set as a wallpaper.

Wallpaper images are usually copyrighted as many other digital images found on the Internet.
