Google Play Store Android.

Google Play Store is Google's official market where we can download applications, books or movies and manage other aspects of our smartphone or tablet.

1 2 3 4 5 6 7 8 9 10.

If you're an Android user, you're not going to need any introductions to know what Google Play Store is all about. Google's digital content distribution platform, previously known as Android Market, is the main Android app store, and the second of the world in turnover, just behind the iTunes App Store. Back in 2013, they exceeded the 50 billion download mark and now in 2017, there are over 2.7 million applications available to be downloaded.

The store where to purchase and download the digital elements distributed by Google.

The main activity of this store is the distribution of applications. Any Android device can access the latter, provided that you've got a Google user account, and browse through the almost 3 million apps offered in its catalog.

There are applications of all sorts, perfectly organized and sorted by categories (games, dates, shopping, communication, sports, fitness. ), paid versions, and free versions. As a user, we can search for them manually, browse the editor picks, check which are the most popular or simply receive recommendations based on what we've already downloaded to our smartphone or tablet. Because from Google's store, and thanks to the email address used to sign up, we'll be able to view which apps we've already installed (even if we've deleted them from our Android).

Nevertheless, and although software is the main asset to be downloaded, we can find many more elements available:

Play Movies. Play Music. Play Books. Play Newsstand (press publications). Devices (Chromecast, Nest products, Pixel C tablets and other accessories that can be purchased).

Other services offered by the official Android store.

We can find functions such as Play Games, the service developed for Android but also available for iOS devices such as iPhone and iPad. It's a function focused on playing that adds a real-time multiplayer option, as well as achievements, leaderboards and the online storage of games compatible with this service that use it to connect its different users.

Furthermore, we can also make use of the following functions :

The configuration of our own account. Purchase gift cards and trade in their codes. Wishlist. Store activity. Parent guide.

And also associated with the Play Store, we've got Google Play Services, the system app by means of Android automatically updates the applications on our handset to their latest version available.

Alternative app stores.

However, there's life beyond Google's market. In fact, some people consider its terms of use too strict since they don't allow the publication of applications that may infringe copyrights or the conditions of other services offered by Google.

Therefore, there are also other alternative stores of the likes of Aptoide, Mobogenie, or Blackmart that have grown considerably over the last few years, as well as loads of web pages from where you can download the APK of these apps. But why would I want to get hold of the APK? Well, it could come in handy to run the application in an Android emulator for PC or Mac.

And that's why we're offering you the download of the Play Store because, despite being preinstalled on the majority of mobile devices, your terminal might not include, especially if you've bought a clean installation without bloatware or any kind of preinstalled software.

How Find Installed Apps From Google Play Store On Android.

Here, are quick steps to find the list of installed apps from Google Play Store On Android . It is quite easy to find installed apps from your Android phone, but Google also provides a way to find installed apps directly from Android market.

Just follow the below steps to find the list of installed apps from Google Play Store on Android.

Steps To Find Installed Apps From Google Play Store from PC:

Just go to Google Play Store. Login with the same Google account that you use on your Android phone while installing apps. You will see a menu option on Right side as "My Android Apps". Just click on that, and you'll be able to see all the installed apps that are on your Android phone.

Best part of this listing is that it shows even those apps which you had earlier installed, but are not on your phone anymore. Those apps show an "Install" option, which tells you that these apps are not on your phone now.

For that apps that are on your phone currently, you will see "Installed" as the option.

Steps To Find Installed Apps From Google Play Store from Android:

Step 1: Sign-up or login to Google Play Store.

Step 2: Tap on the options menu from the home page of Google Play Store.

Step 3: Tap on “My Apps” option from the options menu.

Step 4: Now you will see the list of all the apps installed on your Android phone.

From there you will also find all the pending app updates in Google Play Store. You can update the apps easily from My Apps option in Google Play Store. Also, you will find the recently uninstalled apps in My Apps option from Google Play Store. you can easily install the recently uninstalled apps, if you need them again on your Android phone. With this you don't need to search for the app again to install it on your Android phone.

If you tap on any app which is already installed on your Android phone, then you can enable or disable automatic update of the app from Google Play Store itself.
