systemrescue-8.03-amd64.iso.asc systemrescue-8.03-i686.iso.asc.

Other versions.

You can also download previous versions, or beta versions if you want to have more recent versions of packages or to try the latest features.

Installation on a USB stick or internal disk.

It is possible to use SystemRescue without having a CD/DVD drive as it can be installed on USB sticks, or on a local disk. In any case you will need to download the ISO image from the current page.

Checking the downloaded file.

To confirm that the download was successful, you should download the checksum files and then run verification commands such as the following ones:

These command will recalculate the checksum on the downloaded file, and compare it with the expected checksums. These checksum programs are part of coreutils on Linux and should be pre-installed with most distributions.

You can download sha256sum.exe for windows, and you can run the command from a cmd.exe terminal.

Checking the signature.

You can also verify the signature of the ISO image using GnuPG. The signature is located in the ASC file named after the ISO image that you can get from the main download links at the top of this page. You will also need the public signing key.

Errors during the boot process.

Various issues can cause SystemRescue to hangs or fail with unexpected errors during the boot process. Please do not report these as bugs unless you have verified the frequent causes of these issues:

Boot medias such as CD, DVD, and USB stick are often unreliable and bad blocks will cause problems. You can try another media to see if it makes a difference, and you can enable verification when you burn/copy the ISO image to make sure data written to the device can be read and match the original. Damaged RAM will cause all type of programs to behave unexpectedly. Computers memory can be tested using program such as memtest which is included with SystemRescue. You will also get problems if the system runs out of memory. So make sure your computers has at least 2GB of memory if you start with the default boot options or 4GB if you cache the system into RAM.

Writing the ISO image file to a CD/DVD.

On Linux you can use either command line tools such as cdrecord/wodim or graphical tools such as k3b, brasero or xfburn.

Online documentation.

Reading the Quick Start Guide is recommended if it is your first time using SystemRescue. You may also be interested in the Complete documentation for more details.

Comodo Rescue Disk.

Boot your computer to Comodo Rescue Disk (CRD) and you can scan your entire system for viruses before Windows loads.

Home Rescue Disk.

Comodo Rescue Disk: What it does?

Boot disk that runs Comodo Cleaning Essentials virus scanner in a pre-boot environment Includes full AV scanning engine capable of removing rootkits embedded so deeply they cannot be removed with CCE for Windows Automatically downloads latest virus signatures prior to executing scan for maximum security Perfect for ensuring computers are totally clean of threats when troubleshooting problems or setting up a secure network of endpoints Also includes tools that allow you to explore files, take screenshots and browse the Internet No installation required – runs direct from USB or CD/DVD.

Comodo Rescue Disk (CRD)

is a bootable disk image that allows users to run virus scans in a pre-boot environment. It is a powerful virus, spyware and rootkit cleaner which works in both GUI and text mode. CRD can provide a more comprehensive and thorough scan than regular malware cleaning applications because it cleans your system before Windows is loaded.

CRD is intended to be used when malware embeds itself so deeply into your system that regular AV software cannot remove it. The rescue disk is also very effective at removing infections that are preventing Windows from booting in the first place. Apart from the virus scanner, CRD also provides tools to explore files in your hard drive, take screenshot and browse web pages.

Windows 8 (Both 32-bit and 64-bit versions) Windows 7 (Both 32-bit and 64-bit versions) Windows Vista (Both 32-bit and 64-bit versions) Windows XP (Both 32-bit and 64-bit versions)

Boot your computer to Comodo Rescue Disk (CRD) and you can scan your entire system for viruses before Windows loads.

Intel Pentium II 233 MHz or equivalent processor / Minimum RAM required is 512 MB / 210 MB hard disk space for both 32-bit and 64-bit versions.

Features of Comodo Rescue Disk.

Comodo Rescue Disk is an invaluable addition to any computer owner's security toolkit and forms a great complement to 'regular' AV software such as Comodo Antivirus.

Bootable ISO allows you to run anti-virus scans before Windows loads.

On-demand malware scanner unearths rootkits and other deeply hidden threats.

Extremely efficient malware removal routines thoroughly clean infected computers.

Automatic download of latest virus signatures.

Comprehensive event logs provide detailed overview of malware activity.

Requires no installation and can be launched direct from removable media.

Can be operated in either GUI or text mode.

Ensures a PC has a clean bill of health before proceeding onto OS installation.

Fast, free and easy to use.

Boot your computer to Comodo Rescue Disk (CRD) and you can scan your entire system for viruses before Windows loads.

FAQ about Comodo Rescue Disk.

After using the CRD ISO to create your bootable CD/DVD/USB drive, you next need to make sure the BIOS is set to boot from the correct drive. In most cases, this will require you to manually prioritize the CD/DVD/USB as the boot drive ahead of your usual C: drive. To make this change, you first have to access your computer's BIOS configuration utility.

While the specifics vary from computer to computer, the following steps should be of use to most users:

Place the CD/DVD in your drive or insert the USB key as appropriate Shut down your computer. Note – do a full shut down. A soft restart will not clear memory and the BIOS setup might not appear. Turn your computer back on and be ready to react quickly. During system start up, you will see a message similar to one of the following:

Note – if these instructions do not help then please consult your system manufacturer's website (or call their support) for more details on how to change boot order.

Sometimes, viruses and other malware get embedded so deeply into Windows that they cannot be cleaned by 'regular' anti-virus software running in a Windows environment. You can find and remove these buried threats by booting your computer to CRD and running a virus scan of your system before Windows boots up.

Yes. CRD itself even runs on a lightweight distribution of the Linux operating system.

Comodo Forums - join the Comodo Forums to ask technical questions and find out more about CRD. The forums are populated with experienced users, helpful moderators and our developers regular make contributions. Join for free today at forums.comodo.com Online user guide – see help.comodo.com/topic-170-1-414-4573-Introduction-to-Comodo-Rescue-Disk.html.

The on-demand malware scanner uses the same core engine as Comodo Antivirus but does not require installation and can be run directly from removal media such as a USB stick. Awarded Virus Bulletin VB100 status, the scanning engine uses the very latest heuristic techniques to identify previously unknown, zero day threats with an very high level of efficiency. The scanner is also extremely effective at disinfecting and removing viruses once they have been identified.

Portable applications do not need to be installed and can be run directly from media such as a USB stick.

Boot your computer to Comodo Rescue Disk (CRD) and you can scan your entire system for viruses before Windows loads.

When downloading the software you will also receive access to a GeekBuddy expert, available 24/7. Click on Chat Now from your Management Interface or click on the GeekBuddy icon on your desktop and vendor.

Escan rescue disk iso download.

eScan now updated with Rescue Disk File feature.

Mumbai, March 08, 2010 - eScan one of the leading Information Security solutions now comes with the eScan Rescue Disk File Creation option. Using this, users can create the eScan Rescue Disk that will help them to clean boot their computers to scan and clean infected windows systems from rootkits and file infectors that cannot be cleaned in the normal Windows mode.

The Rescue Disk File creation feature is easy to use and the windows based bootable CD/DVD with the ISO image file can be created by following the eScan Rescue Disk File creation wizard.

Users can also download the eScan Rescue Disk ISO image from <http://update1.mwiti.net/download/tools/escanrd.iso>.

The user guide on how to create and use the eScan Rescue Disk is available at http://download1.mwiti.net/download/wikifiles/eScan_Rescue_Disk.pdf.

Mr. Govind Ramamurthy, CEO & MD, eScan, comments on the latest Rescue Disk feature: "Cleaning rootkits and file infectors were always a problem as they infect critical Windows system files or hide beneath the Windows OS layer. With the eScan Rescue Disk, users can easily clean boot their PC and clean their system. We have introduced this Rescue Disk feature from the recently released eScan Version 10.0.1058.657 and above. This feature is unique on the sense that it is one of the few Windows based rescue disk and presents users with an easy to use standard Windows interface to clean infections and also to troubleshoot problems in the operation system. The eScan Rescue Disk is available for all Windows operating systems above Windows 2000, including Windows 7".

Avast Rescue Disk Software.

A Rescue Disk is a disk for scanning and disinfection of infected PCs. A Rescue Disk should be used in case of an infection that cannot be cured by means of antivirus software or disinfection utilities (for example, Kaspersky AVPTool) running.
