Aimp3 player skins free download.

User rating User Rating.

AIMP is a popular media player as well as an audio organiser. It provides you with a wide range of tools to manage, organise, and play audio on your Windows PC. Once you discover the program's advanced features, it evolves into an essential software to enjoy your favourite music. AIMP supports 32-bit digital audio and 20+ file formats. Moreover, you can use the program to convert files from one format to another. AIMP can also be customised with Winamp add-ons. A lightweight tool, it is free to use, and comes as a compressed file that doesn't affect system performance.

Plenty of features to enjoy your music!

Unlike GOM Audio and KMPlayer, AIMP isn't just an audio player. It serves as a comprehensive audio organiser, making it easier to create playlists and change MP3 tags. AIMP provides you with more control over music files, themes, and hotkeys. The program's DSP Manager comes with an 18-band graphic equalizer, which supports a wide range of sound effects during playback.

Is AIMP easy to use?

While most media players look the same, AIMP features a unique interface. Though it looks cluttered at first glance, you'd be used to the details within a few hours. It won't be wrong to say that AIMP looks different from a typical Windows tool. In fact, it looks like a blend between a Linux and Mac app.

Once you've started playing music on AIMP, you won't just keep staring at the program. However, if you wish to spend some time playing around with the interface, there's a huge collection of visualisations.

Additionally, AIMP leverages a unique way of minimizing the window. Instead of appearing in the taskbar, the program disappears entirely and shows up in a tiny tab at the left-bottom of the screen. The tab only appears when you take the mouse cursor over it.

Since AIMP supports multiple playlists, you can manage a wide range and categories of music with ease. The audio converter and playback options are clearly displayed, and can be navigated through with the hotkeys. With several customisations for these shortcuts, you can use the controls as per your convenience.

How does AIMP manage playlists?

For every music player, playlists are the most important component. While you can curate playlists manually, AIMP gives you the option to use the 'Smart Playlist' feature. It can be used to create a playlist to match your mood and preferences without much effort. Additionally, AIMP can be used to listen to internet radio stations, a feature that's missing in popular programs like ALLPlayer.

Other interesting features include an audio converter, alarm clock, and more. Apart from running like a usual application, AIMP is available in a portable version. You can download and install it on a USB drive, and use the app on any Windows 10 desktop or laptop. AIMP also allows you to play around with pitch, tempo, and speed settings.

Are there volume normalization and mixing options?

With the Volume Normalization' feature, you get access to balanced audio irrespective of specific decibel levels in audio tracks. Simply put, the decibel value in a track determines the loudness limit. Most music tracks have a decibel value between 93 and 96.

With the 'Normalization' feature in AIMP, you can enjoy a constant level of sound. This can be quite helpful in managing video files, since dialogues can be affected by background noise and low-level audio. While using AIMP's 'Normalization' feature, you don't need to adjust the volume multiple times.

Similarly, the 'Mixing' feature allows you to adjust various settings related to smooth transitions between tracks. The program comes with an amazing feature that mixes the audio of the previous track with the next one. In most cases, the first few seconds of a track don't contain any audio. Since the music gradually picks up, it's easier for AIMP to merge two files to create a 'mixed' track.

Just like the beginning, the ending part in most songs doesn't have any audio. While using this feature, you can combine similar tracks to create a single large file. With this feature, you can enjoy little or no silent seconds in the constant playback of your favourite music. In simple terms, the ending of a particular song mixes into the beginning of the next one. Overall, it provides you with a much better experience.

Use the lightweight skin options.

Compared to JetAudio and Media Player Classic, AIMP comes with a wide range of skin options. While the default colour scheme is orange, you might want to find something suitable to the Azure-based Windows theme. The program provides you with plenty of choices, which can be accessed from the 'Options' section. Once you see a slider with colour bars, you can choose from a comprehensive colour spectrum to manage saturation levels and themes.

Without a doubt, AIMP is an excellent media player, and provides you with a wide range of features. Unlike other popular programs, it's not just a music player, but serves as an audio organiser on your Windows computer. Since it's free to use and lightweight, you don't have to worry about any registration or subscription options.

The perfect choice for organising your music!

AIMP is a feature-packed music and media player with support for multiple playlists, codecs, and file formats. With a simple and clean interface, the program is easy to use, and processes 32-bit audio files with high-quality sound. There's also an 18-band graphics equalizer, which ensures optimum sound quality and effects. AIMP is also available on Android.

From Winamp, you can extend various functionalities to AIMP. Some of these include DSP, Input, and Gen plug-ins. It's worth mentioning that hotkeys can be customised, which gives you more flexibility in terms of shortcuts. Last but not least, AIMP lets you grab and convert files in MP3, WAV, OGG, WMA, and other formats.

Are you in need of a great audio player? AIMP Classic is your best bet. Not only is it a fine audio player but it also includes a tag editor and a lyrics finder.

Create playlists and set them to shuffle mode. Also, pick out a visualization to match and enjoy listening to your favorite songs.

Plus, you can switch up its skins, it's easy to use and has an eye-catching interface that's visually captivating.

If you want a simple audio player, styled like WinAMP 3, AIMP Classic is the audio player you need. Finally, it also consumes very few resources and is totally free.

One of the great things about having a smartphone, is that you also always have a music player on hand. You don't have to take your MP3 files on a separate device since you can listen to your favorite songs right on your phone; either because you have them downloaded, or because you listen to them online. We've compiled a list of the best music player apps for Android so you can listen to your favorite artists on your device wherever you go. See more.
