Download app on android pop up.

Completing the CAPTCHA proves you are a human and gives you temporary access to the web property.

What can I do to prevent this in the future?

If you are on a personal connection, like at home, you can run an anti-virus scan on your device to make sure it is not infected with malware.

If you are at an office or shared network, you can ask the network administrator to run a scan across the network looking for misconfigured or infected devices.

Another way to prevent getting this page in the future is to use Privacy Pass. You may need to download version 2.0 now from the Chrome Web Store.

Fix: Virus Detected pop up on Android Phone.

Virus Detected pop up which infects your android devices browsers and display unwanted ads, pop-ups.

These types of adwares track your activity to filter out ads related to your activity and searches. This can be annoying which is why it should be removed. These types of adwares come up bundled with apps or may install them onto your browser via another site.

In this guide, I will list down the steps you can take to remove this and any other adware from your browser.

Remove the Virus Detected Pop-up on your Phone:

The “Virus Detected” popup on the phone is usually due to Chrome being infected by certain adware which is cached by the browser and it can be easily fixed by clearing the cache and the data. However, this is also rarely seen in other browsers so it is recommended to clear their cache and data as well. In order to clear the cache and data on Chrome and other browsers:

Drag down the notifications panels and select “Settings” from the dropdown. Dragging down the notifications panel and tapping on the “Settings” option In settings, click on the “Applications” option and then select “apps”. In apps, scroll down and click on your browser which might be “Chrome, Samsung Internet, Browser, Firefox, UC Browser” or any other. Click on the “Storage” option and then select “Clear Cache”. Also, click on the “Clear Data” option. Tapping on the “Clear Data” and the “Clear Cache” option Check to see if the issue persists.

Remove Virus and Adware from your Phone.

In some cases, the Virus might have infected your phone and it might need to be scanned and cleared manually. For that, you should Scan and remove viruses and also scan and remove adware that has infected your Android mobile. Not only that, but it is also possible that there are suspicious applications installed on your mobile that are giving you this error message.

If you have downloaded any third-party apps recently prior to getting this message, boot your mobile in safe mode and check if the error message is shown over there. If it isn't, then it is most certainly the apps that are causing this particular issue. Therefore, it is recommended that you try to remove these apps from your phone and check if the issue still persists.

In addition to that, make sure that you don't surf websites that are distributing certain software cracks or that ask you to download files that are suspicious because they contain viruses and they can infect your smartphone which can trigger this error.
