

minecraft windows 10 edition not downloading properly

Minecraft guide: How to redeem your free copy of Minecraft: Bedrock Edition on Windows 10.

Long-time players of Minecraft on PC have likely enjoyed their Minecraft adventures while playing the Java Edition. If you're one of the millions of people that bought the Java Edition of Minecraft before October 19, 2018 you can claim a free copy of the modern Bedrock Edition of Minecraft on Windows 10. Take advantage of this offer while it's still available.

This offer expires on April 21, 2020.

Available everywhere.

Minecraft.

A game you can play anywhere with anyone.

The only thing that could make Minecraft even better is if you could play it in more places. Wait, you can? That's right because Minecraft is available on almost every platform imaginable like Xbox, Windows 10, Playstation 4, Nintendo Switch, Android, and iOS. Get it everywhere, play it anywhere.

How to get Minecraft: Bedrock Edition for Windows 10 for free.

Launch your favorite web browser from the Start menu or taskbar.

Source: Windows Central.

Click the Email field.

Source: Windows Central.

Click the password field .

Source: Windows Central.

Click the Log in button .

Source: Windows Central.

Click the Redeem button .

Source: Windows Central.

Click the Open button to launch Minecraft: Bedrock Edition for Windows 10.

Source: Windows Central.

That's it! You can now enjoy the newest version of Minecraft. If you can't take advantage of this offer, you can still buy the Bedrock Edition directly from Microsoft.

Any of these pre-built PCs are perfect for playing Minecraft.

Java and Bedrock versions of Minecraft both have rather low PC system requirements, but that doesn't mean a more powerful PC can't make the experience far better. Here are the best pre-built PCs for Minecraft.

[SOLVED] Minecraft Won't Launch in Windows | 2021 Guide.

Feel upset when your Minecraft won't launch? Don't worry, you're not alone. Click this post and you'll know how to fix this problem.

Last Updated: 4 months ago.

It is really upset when you want to play Minecraft but it won't launch! Don't worry, try the solutions below and you can enjoy your game.

If you don't know whether your computer is powerful enough to run the game which is a possible reason for this issue, you can check Minecraft system requirements first.

Try these fixes:

You may not have to try them all; just work your way down the list until you find the one that works for you.

End your Minecraft process Run Minecraft as administrator Use the Compatibility mode Update your video card driver Reinstall the Minecraft.

Fix 1: End your Minecraft process.

If the launcher closed but not start Minecraft after clicking the Play button, you can open the Task Manager to end the task manually. Reboot Minecraft may fix the won't launch issue. Some users have mentioned that when this issue appears, there'll be two MinecraftLauncher.exe. You need to end both tasks and reboot the game. Here's how:

Press the Ctrl + Shift + Esc key together on your keyboard to open the Task Manager . In the Processes tab, right-click on the Minecraft and choose End task . Launch Minecraft again to check if it's working properly.

If you got two MinecraftLauncher.exe, after fixing the issue, you need to open Settings in the launcher, choose "Keep the launcher open while the game is running". You could meet two situations:

The launcher doesn't respond. You could close it and Minecraft would run as usual. The launcher responds and stays open, Minecraft just works fine.

To get a better gaming experience and improve your computer performance, it's recommended to update your drivers.

Fix 2: End incompatible software.

You'd better end all the background apps before running Minecraft. Minecraft helping center has listed software that are known to be incompatible with Minecraft and should be uninstalled from your system.

Discord, AVG Antivirus, BitDefender and etc. are on the list. So disabling your antiviruses and firewalls, shutting down your Discord and run Minecraft.

If it's running properly, you'd better change the antiviruses software.

Please don't click suspicious links or websites while your antiviruses software and firewalls are disabled, your computer is under risk.

Fix 3: Run Minecraft as administrator.

The privilege issue might be the reason for this problem. With high integrity access, Minecraft can make full use of its features, so run Minecraft as an administrator to see if this fixes your issue.

HOW : Right-click on Minecraft and choose Run as administrator .

Launch Minecraft and check to see if it's working properly.

Fix 4: Use the Compatibility mode.

Games that were created for earlier versions of Windows will work in the recent version of Windows 10, but some may run poorly or not launch at all. Compatibility mode allows games to use settings from an earlier version of Windows which can help you solve the Minecraft won't launch issue.

Right-click on your Minecraft and choose Properties . In the Compatibility tab check the box Run this program in compatibility mode for . Choose the operating system on the drop-down menu. Click Apply > OK .

Launch Minecraft and check to see if it's working properly.

Fix 5: Remove Mods.

Various mods are available for Minecraft and it's normal to use mods when playing Minecraft. However, mods sometimes change your game's behavior and may cause unknown problems. So if you use mods while playing Minecraft, remove all mods you've installed.

If your game works perfectly, the issue was certainly caused by mods. You can check mods one by one to see which one causes the problem. If your issue still persists, don't worry. There is something else to try.

Fix 6: Update your video card driver.

The "Minecraft won't launch" problem is probably being caused by driver issues. If you're using the wrong video card driver or the driver is out of date, you may meet this problem. In addition to solving this problem, updating drivers can also improve your computer performance. There are two ways to update your drivers:

Option 1 – Manually – You'll need some computer skills and patience to update your drivers this way, because you need to find exactly the right the driver online, download it and install it step by step.

Option 2 – Automatically (Recommended) – This is the quickest and easiest option. It's all done with just a couple of mouse clicks – easy even if you're a computer newbie.

Option 1 – Download and install the driver manually.

To get the latest driver, you need to go to the manufacturer website, find the drivers corresponding with your specific flavor of Windows version (for example, Windows 32 bit) and download the driver manually.

Once you've downloaded the correct drivers for your system, double-click on the downloaded file and follow the on-screen instructions to install the driver.

Option 2 – Automatically update video card drivers.

If you don't have the time, patience or computer skills to update your drivers manually, you can do it automatically with Driver Easy.

Driver Easy will automatically recognize your system and find the correct drivers for it. You don't need to know exactly what system your computer is running, you don't need to risk downloading and installing the wrong driver, and you don't need to worry about making a mistake when installing.

You can update your drivers automatically with either the FREE or the Pro version of Driver Easy. But with the Pro version it takes just 2 clicks (and you get full support and a 30-day money back guarantee):

Download and install Driver Easy. Run Driver Easy and click Scan Now button. Driver Easy will then scan your computer and detect any problem drivers. Click the Update button next to the driver to automatically download and install the correct version of this driver (you can do this with the Free version). Or click Update All to automatically download and install the correct version of all the drivers that are missing or out of date on your system (this requires the Pro version – you'll be prompted to upgrade when you click Update All).

Reboot your computer and launch the game to see if Minecraft is launching properly.

Fix 7: Reinstall the Minecraft.

If you don't know what's the problem, then reinstalling Minecraft is a good idea. This common but useful method has helped many users.

Navigate to C:\Program Files (x86)\Minecraft. Double click uninstall to uninstall Minecraft. and install the latest version of Minecraft.

Launch Minecraft and check to see if it's working properly.

We hope you find the above information helpful. And if you have any ideas, suggestions, or questions, feel free to leave a comment below.

If I buy minecraft with a mojang account on a computer, do I need to buy it on another computer?

I plan on buying a gaming PC as I expect to be able to get it around a year and I currently have a laptop that I play (a pirated version of) minecraft. I heard that minecraft broke out off of the "cringe culture", which convinced me to finally buy it (for now) and later buy the gaming PC, but.

The thing I'm wondering about is, if I buy minecraft on a laptop, will I be able to avoid the whole buying part when I'll get a gaming PC in the future?

Just want to know if I just need to re-download minecraft and log-in on my mojang account or (in the worst case) re-purchase minecraft and log-in on my mojang account.

Minecraft Windows 10 edition not downloading.

When I tried to download the game, it is stuck at this screen for a couple minutes and won't download. Any ideas on how to fix it?

How long did you wait? A couple minutes quite, I would wait a little more to see if it progresses.

Start by running the Windows Store Apps troubleshooter.

Open Start > Settings > Update & security > Troubleshoot Scroll down to the bottom Click Windows Store Apps.

Click Run the troubleshooter.

When complete try opening the Store again.

Also check if the Store works in another user account.

Press Windows key + R Type: wsreset.exe Hit Enter.

Do this a couple times then try launching the Store again.

Your Antivirus might be interfering with the Store, try disabling it 'temporarily' to see if it launches.

Check Windows Update and install the latest updates. Sometimes Microsoft releases infrastructure fixes for the Store through Windows Update.

Try downloading again.

If that does not work, reset the software distribution folder then make another attempt and let us know.

Before carrying out this procedure, disconnect from the Internet. That means turning off Wi-Fi and disconnecting from a wired connection. If you don't, Windows 10 will indicate some files are in use and cannot be modified or the command will be non-responsive. Also, you should restart your computer after disconnecting from the Internet. The easiest way to do it is to enable Aeroplane mode from the Action Center.

1. Press Windows Key + X on the keyboard and then select "Command Prompt (Admin)" from the menu.

2. Stop the BITS, Cryptographic, MSI Installer and the Windows Update Services. To do this, type the following commands at a command prompt. Press the "ENTER" key after you type each command.

```
net stop wuauerv.
```

```
net stop cryptSvc.
```

```
net stop msiserver.
```

3. Now rename the SoftwareDistribution and Catroot2 folder. You can do this by typing the following commands in the Command Prompt. Press the "ENTER" key after you type each command.

```
ren C:\Windows\SoftwareDistribution SoftwareDistribution.old.
```

```
ren C:\Windows\System32\catroot2 Catroot2.old.
```

4. Now, let's restart the BITS, Cryptographic, MSI Installer and the Windows Update Services. Type the following commands in the Command Prompt for this. Press the ENTER key after you type each command.

```
net start wuauerv.
```

```
net start cryptSvc.
```

net start msiserver.

5. Type Exit in the Command Prompt to close it and then restart the computer.

Unable to install purchased Minecraft game. Can't find device.

I purchased the PC version of the Minecraft game for my son.

I created a family account on my PC and was able to locate my PC under My Devices, however, Minecraft install is not finding my device. The message when I select 'Install on my Device' is: " It looks like you don't have any applicable device(s) linked to your Microsoft account. To install, sign in on a device with your Microsoft account."

I've reset the Microsoft Store cache, restarted the PC, and now I'm stuck. Please advise.
