VERSION 2.28.1.

This update is supplied as a full install containing the Sailwave.exe version 2.28.1. You need to download from the link below and run the installer. If you have any issues installing please try running the installer as administrator by right-clicking the sw2_28_1.exe file and selecting run as administrator.

Huw has tested the installer under Linux without any problems but points out if you are using Wine you should be using at least version 3.0. If you want to run the World Sailing (ISAF) interface with Wine or on a Mac please ask for help or see instructions on the Sailwave User Group.

It can be downloaded from

For Mac and other operating systems see above and read Other Operating systems.

One thought on “VERSION 2.28.1”

Great scoring system. I have been using it for many years in South Africa mainly for RCLaser and other RC yachts including Nationals and Provincial Champs. Thank you.

This free software in return for a Sailwave logo linked to sailwave.com on your event or club website and a restriction that the Sailwave link in the results footer shall not be removed regardless of media or reformatting. This is a good example of a simple but effective event page and this is their club results page.

BY USING SAILWAVE YOU ARE AGREEING TO THIS DEAL.

Version 2.29.0.

This is an exciting upgrade for those publishing to their own websites.

This new version now includes a fully integrated support for SFTP, SSH, and FTPS in addition to a new FTP uploader for uploading published results directly to your website. This was previously only possible if your website or service supported FTP but many are no longer supporting FTP and require SFTP or SSH uploads. This all now comes built into your favorite scoring program Sailwave.

In addition to the support for the secure protocols, there have been some other changes. The Base URL window now works correctly as intended which may mean if you have been using FTP previously and left this blank you will need to insert “/” in this window. If you have entered a directory path here and been entering it in front of the filename you will no longer need it in front of the filename. The famous Error 0 no longer applies when you get an error uploading to your website, you should now get a more informative message such as authentication failure meaning your username or password is incorrect. Note an access error means you don't have permissions.

This is a full install and also includes.

the changes in 2.28.14 (see Beta releases) plus Increase buffer size for the format of columns to allow larger HTML formatting from 150 to 500 chars – This allows the creation of links on any column – see user group for detail Increase buffer size for Fleet name to 40 from 20 in Main competitor edit window Increase entry size for Venue and Event burgees from 100 to 255 chars to allow long URL's to be used.

Please report any issues and I will try to fix them.

You can download Version 2.29.0 from the link below.

For Mac and other operating systems read Other Operating systems.

Any difficulties please ask on the chat or User Group.

VERSION 2.28.11.

To Download this version please click the link at the end of this section.

Last Page update 02-12-2020 Jon.

For changes since the last full install please also see the changes in the Download Beta for 2.28.3 and 2.28.7.

Changes as per 2.28.3 <https://www.sailwave.com/version-2-28-3-beta> and 2.28.7 <https://www.sailwave.com/sailwave-2-28-7> Importing results from CSV improved – If there is no Start time specified in the import CSV it will look up if it matches the conditions for a start in the race and uses the times specified. Added the ability to import Race Name, Date, and Time. The instructions on the Sailwave website have been updated please see <https://www.sailwave.com/how-do-i-import-a-list-of-race-results> Updated the link generated for linking to results uploaded to the Sailwave results folder. Updated PYonline link Increased size of Notes allowed when publishing Added the NSC code for when a boat doesn't sail the course as per World Sailing RRS 2021 Added Windows message support for Add and Delete races New Effects are included in the install This version is digitally signed with a certificate.

This update is supplied as a full install containing the Sailwave.exe version 2.28.11. You need to download from the link below and run the installer. If you have any issues installing please try running the installer as administrator by right-clicking the sw2_28_11.exe file and selecting run as administrator.

If you want to run the World Sailing (ISAF) interface with Wine or on a Mac please see instructions on the Sailwave User Group.

Version 2.28.11 can be downloaded from

For Mac and other operating systems see above and read Other Operating systems.

VERSION 2.28.2.

To Download this version please click the link at the end of this section.

Last Page update 07-04-2020 Jon.

This is a minor update to 2.28.1 but the installer has been updated to include the Updated PY ratings and an example template for use with the RYA virtual racing.

This version is digitally signed with a certificate. Hopefully, it will reduce the number of false positives that are generated by anti-virus software. You will at least be guaranteed that no one has tampered with the install file. Fixed templates for Autoscaling of Burgee images when using Publish Results V2.

This update is supplied as a full install containing the Sailwave.exe version 2.28.2. You need to download from the link below and run the installer. If you have any issues installing please try running the installer as administrator by right-clicking the sw2_28_2.exe file and selecting run as administrator.

If you want to run the World Sailing (ISAF) interface with Wine or on a Mac please see instructions on the Sailwave User Group.

It can be downloaded from

For Mac and other operating systems see above and read Other Operating systems.

VERSION 2.28.1.

To Download this version please click the link at the end of this section.

Last Page update 14-07-2019 Jon.

A new version of Sailwave which introduces some new features.

This is the first version non-beta to be digitally signed with a certificate. Hopefully, it will reduce the number of false positives that are generated by anti-virus software. You will at least be guaranteed that no one has tampered with the install file. This version is the first one non-beta published on the Sailwave site to be built with a new version of the compiler and this enables touch control to scroll the data around. So if you have a touch-enabled device give it a go. RORC high point scoring is in Beta in this version. The RORC factors are not implemented for RORC series as yet. This Version also has Iceboat support in Beta. The import from CSV has been reworked and expanded – see documentation on the Sailwave web site The install also contains updated versions of SWCList, ISAF (World Sailing) interface and the SWHelper for NHC scoring which now supports internal calculations when you are using PY numbers. You will also notice some cosmetic and font changes. There are improvements in the RYA PY returns and some bug fixes. New Rating files are included as are the additional information for the PY returns. Correction of DNE description.

This update is supplied as a full install containing the Sailwave.exe version 2.28.1. You need to download from the link below and run the installer. If you have any issues installing please try running the installer as administrator by right-clicking the sw2_28_1.exe file and selecting run as administrator.

Huw has tested the installer under Linux without any problems but points out if you are using Wine you should be using at least version 3.0. If you want to run the World Sailing (ISAF) interface with Wine or on a Mac please ask for help or see instructions on the Sailwave User Group.

It can be downloaded from

VERSION 2.25.11.

This new version fixes a bug with discards of medal races that was introduced in 2.25.9 So it's important if you are scoring with medal races.

This update is supplied as a full install containing the Sailwave.exe version 2.25.11. You need to download from the link below and run the installer. If you have any issues installing please try running the installer as administrator by right-clicking the sw2_25_11.exe file and selecting run as administrator.

VERSION 2.25.10.

This new version fixes a bug with publishing unsailed races even when all races are selected. So it probably won't affect many users.

This update is supplied as a full install containing the Sailwave.exe version 2.25.10. You need to download from the link below and run the installer. If you have any issues installing please try running the installer as administrator by right-clicking the sw2_25_10.exe file and selecting run as administrator.

VERSION 2.25.9.

New Version includes some new features and enhancements and a bug fix for the finals discard profiles when performing Qualifiers and Finals.

This update is supplied as a full install containing the Sailwave.exe version 2.25.9. You need to download from the link below and run the installer. If you have any issues installing please try running the installer as administrator by right-clicking the sw2_25_9.exe file and selecting run as administrator.

Some features all users will notice are:-

Fixed bug with Discard profile of finals when using Qualifiers and Finals When publishing individual races with the option of sailed races only the races with results will be published. Publishing using Results V2 will auto size the header images and improve the balance of the results appearance. More details on the Sailwave User Group.

Version 2.25.4.

New Version includes some new features and enhancements so definitely worth upgrading. 2.25.4 has been available in Beta and I've had no negative feedback so I'm happy to release it as the new Standard Version. For full details of changes since the version you are using please look at the release notes for the Beta versions.

This update is supplied as a full install containing the Sailwave.exe version 2.25.4. You need to download from the link below and run the installer. If you have any issues installing please try running the installer as administrator by right-clicking the sw2_25_4.exe file and selecting run as administrator.

Some features all users will notice are:-

A new feature is a Search/Filter box to the ribbon so that it is possible to selectively display competitors and easily find competitors should you wish to edit them. As you type in the Search/ Filter box only competitors that match what has been typed are displayed. This is updated live rather like a Google search. Clear the box to ensure all competitors are displayed. Any full or partial match in Fleet, Flight, Class, Division, Boat, HelmName, CrewName, SailNo, AltSailNo, Club will cause the competitor to be displayed.

The Tools – Set competitor field and Tools – Seed competitor field now use the name you supplied for renaming the columns. Previously if you renamed a column you had to remember and use the default field name. This is now all handled by the Sailwave software for you.

Version 2.24.0.

Download link.

For a windows install use the following link:-

For Apple Mac install please use the above together with WineBottler (see the FAQ) For a use as a portable app which can be used on a USB memory stick, please download version 2.9.7 below.

Note: If you are re-installing Sailwave, all files and folders in the install directory are removed prior to installation. Please make backups as needed. Under normal circumstances this is not necessary – you should never need to change or add files in the Sailwave install directory. Please use the Browse Sailwave Data to see the Sailwave user changeable files.

Changes.

Version 2.24.0 is a relatively small but important update on 2.23.4.

Changes since the previous release (2.23.4) includes the following:-

Support for Percentage penalty to be added based on DNF score (as well as the previous method based on number of boats in the series) This was changed in RRS 2017-2020. If you are using SCP and or ZFP in your results you should change the scoring codes to use the new DNF based calculations if you are scoring to RRS2017-2020. In most calculations it doesn't make any difference but there are some where it makes 1 point difference due to the rounding. Support for PRP (Post Race Penalty – Arbitration) as used by Techno293 Fleet “The race score for a board that takes a Post-Race Penalty shall be the score she would have received without that penalty made worse by 30% of the score for DNF, rounded to the nearest whole number (0.5 rounded upwards), but not more than half of the difference between the board's score before applying the penalty and the score for DNF.” Updated the plug-in interface to World Sailing for reporting results directly to World Sailing (ISAF) Corrected Black flag rule to reference 30.4 instead of 30.3.

Version 2.23.4.

Download link.

For a windows install use the following link:-

For a use as a portable app which can be used on a USB memory stick, please download version 2.9.7 below.

Note: If you are re-installing Sailwave, all files and folders in the install directory are removed prior to installation. Please make backups as needed. Under normal circumstances this is not necessary – you should never need to change or add files in the Sailwave install directory. Please use the Browse Sailwave Data to see the Sailwave user changeable files.

Changes.

Version 2.23.4 has been available to users for sometime now who follow the Sailwave User Group and has proven to be stable and with many new features since added since 2.19.8 Changes since the previous release (2.19.8) includes the following-

Операционная система.

Macross 82-99's 'Sailorwave' Should Be Every Retro Anime Fan's Soundtrack.

Remixing old-school Japanese pop songs and adding a Sailor Moon-themed veneer, Sailorwave is the soundtrack for '80s and '90s anime nostalgia.

Some of the first anime to make it big in the West were Dragon Ball and Sailor Moon. Their enduring popularity is an equally endless source of nostalgia, even for those who didn't grow up watching them. '80s and '90s nostalgia has, over the last decade, given rise to Vaporwave. This sample-laden retrofest of a musical genre combines the glitz and glam of the late '80s/early '90s with representations of capitalism and excess, as well as a heaping helping of colorful anime and video games. One of the biggest names in the Vaporwave genre is Macross 82-99, a Mexican music producer who's pioneered the subgenre of Future Funk. Some of his best works include the Sailorwave albums, which unite sugary Japanese pop music from yesteryear with a certain Pretty Guardian.

AESTHETIC.

Though plunderphonics songs that heavily sampled other works existed long before, the Vaporwave genre is seen by many as beginning in 2010 with the release of Chuck Person's EccoJams Vol. 1. This album had cover art based off of the Sega video game Ecco the Dolphin, with the songs within sampling and remixing old hits from Fleetwood Mac, Toto and others into ambient, dream-like tunes. Macintosh Plus' Floral Shoppe solidified other elements of the genre, such as the presence of Greco-Roman statues, Arizona Green Tea, video game sounds, old-school anime and Memphis Milano artwork. The genre quickly rose in popularity, especially among classic video game and anime enthusiasts, as well as those simply seeking to experience the '80s again or for the first time.

The genre is very similar and closely related to Synthwave, Chillwave, and lo-fi music, causing some confusion as to where one genre begins or ends. Official offshoots include Hardvapour, which combined an edgier sound with a dystopian, Post-Soviet rejection of Capitalistic excess, as well as Mallsoft, Simpsonwave and Fashwave. The former ties into the incredible mall culture of the late 20th century, further extending the genre's influence by being integral to the growing fandom of Dead Mall videos on Youtube. Simpsonwave combines old-school tunes with VHS-ified footage of The Simpsons, while Fashwave is a political genre that many times features Nazi iconography.

Easily the most popular subgenre of Vaporwave is Future Funk, which is much more upbeat than the more atmospheric main genre. Songs in this genre take the anime presence to an extreme by pairing it with peppy Japanese City Pop fit for a disco. Whereas Vaporwave typically slows and deepens songs' audio, Future Funk increases the speed and raises the pitch, all while adding snazzy, pulse-pounding drums. The disco and house elements are usually combined in music videos with footage from anime such as Urusei Yatsura, Super Dimension Fortress Macross and Sailor Moon, especially when involving the work of the aptly named Macross 82-99.

The Future is Bright.

Macross 82-99 - real name Alberto Munoz Calderon - was inspired by electronic acts such as Daft Punk before beginning his own career in the burgeoning Future Funk subgenre. Also an avid fan of anime and Japanese culture in general, he wanted his music to reflect these interests. The Sailorwave trilogy is a great example of this, as the albums' genesis was the producer being heavily into rewatching Sailor Moon at the time. The first of these albums was released in the tail end of 2013, tickling listeners' ears with songs such as NEW DAWN, which samples and heavily remixes Merry Go Round by J-Pop icon Tatsuro Yamashita. Yamashita is also the husband of J-Pop and Vaporwave goddess Mariya Takeuchi, whose beloved song Plastic Love has become an anthem of both Vaporwave and Future Funk.

The actual songs on the album typically have very little if anything to do with Sailor Moon, with the link mainly being made due to the album cover. The music videos for similar Future Funk songs do have closer ties, with said videos featuring unrelated but cute GIFs from the Sailor Moon anime. A similar concept was used by Netherlands-based Vaporwave composer Maitro, who produced three albums in a series he titled Dragonball Wave. Perhaps the first album's most notable track was Snake Way, named after a concept from Dragon Ball Z. An example of more classical Vaporwave, this song transformed The Rippington's smooth and sultry Tourist in Paradise into an echoing miasma of music. Needless to say, this expansive genre of music has ties across all manner of fandom, but those seeking a return to the '80s and a look at old school anime in particular could choose no better starting point than Sailorwave.
